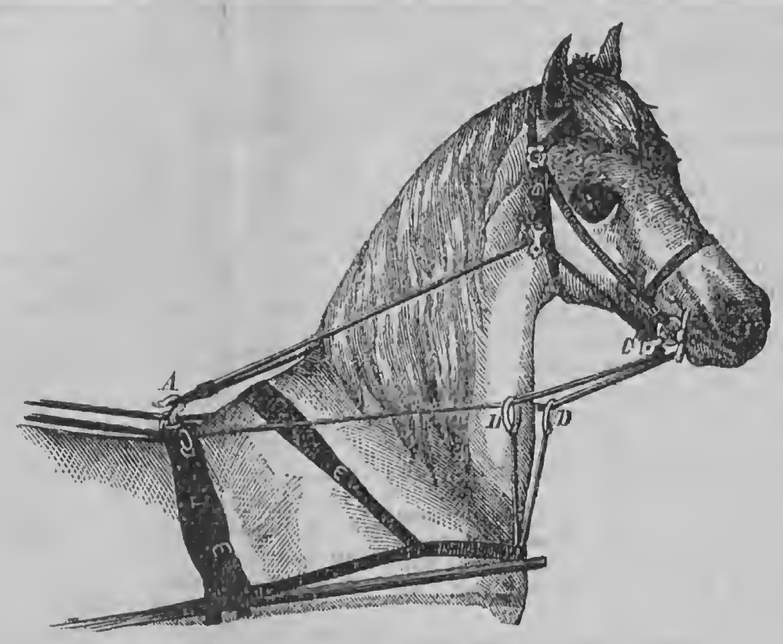
But the remedy for these imperfect soils, though easily pointed out, is by no means readily applied. As a general thing the mixing of soils on a large scale is impracticable, simply on account of the great labor and consequent expense thereby involved. Yet there are some instances in which soils may be mixed with profit, and some of these we will indicate. Stubborn clays are sometimes veined with sand and gravel; these different soils may be intermingled by free use of the common and sub-soil plow and cultivator. Thin surface soils of light sand are not unfrequently underlaid with hardpan clays; in these cases deep trench plowing will throw the clay to the surface; the air operates favorably on it, and the arable soil is greatly enriched. Sometimes cold thick layers of clay rest on sand, which crops out on the surface at frequent intervals; in such instances carting may often be resorted to with profit. Some may also rest on clay in the same position. Every owner of a farm should be thoroughly acquainted with the nature of the sub-soil, and understand whether it would be a benefit or not to throw it to the surface. In many instances deep trench ploughing would immediately double the productive power of the land, and in others by far the best course would be sub-soiling.



IMPROVED CHECK AND DRIVING REIN.

OUR engraving shows a method of connecting the check and driving reins on single horses which secures to the driver some important advantages. At A the check rein is attached to the usual fastening on the saddle of the harness and immediately in front of this it is looped firmly together. At this point A, reins divide, one passing on each side of the horse's neck, through the small light pulleys, B and C, and back through the martingale rings, D, and the terrets, to the driver. This contrivance enables the driver to exert great power on the bit, and to control, to a great extent, the position of the horse's head. The animal can also lower his head to drink without necessitating the driver's descent from his seat to loosen the check rein. The contrivance can be readily attached to any harness with trifling expense, and is worthy attention from those who drive hard-mouthed and unreliable horses.

A FEW WORDS ABOUT HORSES.

HAY and oats make the best feed for horses that are obliged to work hard and regularly. If the hay is cut fine and the oats bruised or ground, the whole mixed and moistened, the horse will eat his rations quicker, digest them sooner, and thus have more time for resting and renewing his powers for labor. Farmers' horses that work little during winter time may be kept cheaper by cutting and mixing bright straw and hay in equal quantities, and adding a ration of steamed potatoes or raw carrots. Colts should be fed liberally on good hay—bright clover is best—and bruised oats; give them a roomy box stall in stormy weather and during nights. Litter freely and let the manure accumulate under them. Sawdust or spent tan make good and convenient bedding; in cities and villages they are often cheaper than straw. Groom horses well and let them have exercise every day; a run in the yard is excellent. See that stable floors over basements are sound and strong. Arrange the feeding-racks so that dust and hay seed will not fall into horses' manes or eyes; some horsemen build their mangers too high, thus forcing the animal to take an unnatural and painful position when eating. Farm horses that are not worked should have their shoes taken off, and those that are driven on the road should be kept well shod.

"BOOK FARMING," AGAIN.

THE Reporter of the American Institute Farmers' Club, replies to our criticism upon its discussion of the value of book knowledge in farming, that they "did not say that such books should not be read, but that they had done a great deal of harm;" that "LIEBIG, the most prominent of them, has made important statements regarding spring wheat, which experience has proved false;" that "most of these writers teach theories—of the practice they know nothing;" that the English Agricultural writers "for the most part are the understrappers of some lord or duke, use obscure terms and set phrases, &c.;" that "we must scrape off this foreign scurf and tread it under foot."

This member of the Club, evidently, did not attend the World's Peace Congress. A few "obscure terms and set phrases" relating to International Courtesy must have been omitted in his early education. LIEBIG, says the Reporter, has made a mistake about spring wheat, therefore his teachings only lead astray. Well, if infallibility is required in an agricultural writer before he is worthy to be consulted, then, we freely confess, that they must all be discarded—except the members of this Club.

We mentioned as worthy of early study by the young farmer, Johnston's Agricultural Chemistry, Boussingault's Rural Economy, Liebig's Natural Laws of Husbandry, and French on Drainage. We did not know that JOHNSTON was an "understrapper of some lord or duke." Had we been possessed of this information, we should have hesitated to offend the democratic lord of the American soil by proposing so low an instructor. It has always been represented that he was a Professor of Chemistry in the University of Durham, that he supervised many experiments in Agriculture—that he delivered his Lectures upon Agricultural Chemistry before a body of practical farmers, who had no previous instruction in Chemistry, and without the use of technical scientific terms made them comprehend the subject, and was read with profound attention by the most enlightened practical agriculturists in England. Indeed, the members of our State Legislature and our State Agricultural Society must have been imposed upon, for in 1849 and 1850, this "understrapper" was invited and delivered a course of lectures at Albany before the members of the Legislature and the foremost farmers of the State, upon the "Relation of Science to Practical Agriculture," which were highly commended by the auditors and published by the State. What a lucky fellow he was, to get into such good and appreciative society, when he was only "foreign scurf!"

"Most of these writers teach theories—of the practice they know nothing," says the Club Reporter. Here again our information has led us astray. Liebig's Natural Laws of Husbandry and Boussingault's Rural Economy, appear to be founded, almost entirely, upon actual experiment,—but these are, it seems, apocryphal, detailed probably, to make a statement more plausible! The world owes the Club a debt of gratitude for exposing the charlatanry of these writers.

The Tribune circulates somewhat in England, and when they read this announciation of the Club and see how easily they are disposed of and "tread under foot" as "foreign scurf," however much they may writhe in the uncomfortable position, they can but admire the *elephantine foot* that bore them down. E. W. S.

LETTER FROM MISSISSIPPI

ABOUT NORTHERN FARMERS GOING SOUTH.

MARION, Lauderdale Co., Miss.

SOLICITED by a Freedman to read for him the address of Hon. WM. D. KELLEY, delivered at Philadelphia after his return from his Southern tour, I cannot refrain from adding my testimony in confirmation of his assertions. Indebted to the military service of the Union army for opportunity of several years' sojourn in the "Sunny South," I so far realized the imaginings of my boyhood's fancy that I determined to make it my future home. A two years' residence as citizen and farmer in this genial clime, solitary and alone among my former mortal enemies, has certainly given good chance for observation and experience, and the longer I remain the more often do I think: How is it possible so many farmers, particularly of the Eastern States, can remain in those sterile regions, when such vast fields, so rich in Nature's bounty, stand invitingly open before them? Did they but know the need there is for them, the certain remuneration that would reward their privation, it appears to me there would be an emigration such as has never been witnessed on this Continent.

THE PEOPLE.

I came among them as a discharged Federal soldier. I have been known as a firm Republican, (or as is more familiarly termed, Radical;) I have witnessed all the storms of passion, when, from the encouragement of the Presidential incumbent and his friends the South was receiving aid and comfort, and secession blazing up with fearful vigor,—my ears assailed with vituperation against our Legislators that made my blood tingle,—yet in all this I have never been subjected to insult or personal indignity. In all my intercourse I have been treated with as much courtesy, and found men as honorable, as was ever my experience in Indiana, (my native State.) My family have been accorded as many acts of kindness, and our neighbors are as generous as were those with whom we were associated in other days. True, it would have been much more pleasant to have the advantages suggested by the Hon. M. C.—a little colony—but we have done very well without them. Our children have associated in their schools; we have met in their churches, and only by thinking of the past could we realize that we were among those who had ever been otherwise than our friends.

And now a change has come o'er the spirit of the land. If not before, good Northern people are now at a premium, and little fear need there be that this will change. The late enactments of Congress have produced an element that will ever hold in subjection the fiery zeal of the secessionist. None but those who have weathered the storm could believe how rapidly this prejudice is disappearing, and be assured *now* it will be forever. All that we at present need is enterprise, energy and skill. The former planter, intelligent and well experienced in the farming of other days, is helpless; a revolution in Agriculture must take place, and in the adaptation of labor and management to the present condition of things, he is, I believe, more in the dark than would be a Northern farmer. I believe this from my own experience. I came here ignorant of the first principles of agriculture practically, yet I raised the best crop, and managed my hands with less trouble than any man in the county. If this be the result in the case of one thus ignorant, what might we not expect of a practical, energetic Northern farmer, of whom you have thousands that might so readily be spared?

Of the character of labor, of the products, climate, &c., I will not now speak; but a word in regard to

LOCALITY.

We are not out of the world or isolated. In all the Cis-Mississippi States there is extensive railroad communication. I selected this point on account of such facilities. In sight is the railroad from the Gulf to Cairo. We have a daily mail, so that in this respect we have advantages superior to those enjoyed by many of our Western friends. At like distance another road from Vicksburgh to Montgomery, Ala., certainly gives all the advantages of egress and ingress desirable. With all these facilities lands can be had from $3 to $15 per acre, any of which, with half the care and expense, would be far more remunerative than a great majority of the farms in the New England States at least. The time for visiting these regions is at hand for any who may feel disposed to look for a home.

No fear of disease, heat of climate or personal danger; the period for all this has past. Good men, good citizens, will be warmly and sincerely welcomed, and kindnesses extended which they would have little reason to expect. The portals are numerous; any State or region one might fancy can be visited with pleasure and profit. Let visitors select any portion fancy or description may prompt, and my word for it they will never regret the time or money spent. If deemed worthy of attention you will hear from me again. Very respectfully, TYRO.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

NATIONAL WOOL GROWERS' ASSOCIATION.

THE National Wool Growers' Association will hold its Annual Meeting in Pittsburg, Pa., on Wednesday, Nov. 27th, at 12 o'clock, M. The Executive Board are requested to meet at the Monongahela House.

HENRY S. RANDALL, *President.*
WM. F. GREER, *Secretary.*

CHICAGO WOOL EXPOSITION.

WE have already learnt, by numerous letters and telegrams, that the proposal to hold a National Wool Exposition at Chicago, in the spring of 1868, is received with favor by prominent growers and manufacturers in every part of the country heard from. We also learn that there is not a particle of doubt that the National Association of Wool Manufacturers will gladly accept an invitation to participate in such a joint Exposition, if it is made to them by the National Wool Growers' Association.

Every wool grower we have heard from, without exception, endorses the proposition, and all agree that Chicago, in the very heart of the great West, is, under existing circumstances and for the attainment of certain leading objects in view, the best locality for this grand industrial exhibition.

We have no doubt, from present indications, that the Exposition will be determined on, and that the growers and manufacturers will unite to render their respective departments of the exhibition as full, as varied and as perfect as possible. The display of sheep and wool may be made far to exceed that of the Paris Exposition. That of manufactures composed wholly or in part of wool, and auxiliary manufactures—from the richest and costliest fabrics to the least important articles—would, we venture to predict, astonish even those who consider themselves best informed in regard to the progress of this industry in the United States.

It would of course be premature to attempt to suggest any special mode or system of awards or prizes to exhibitors,—but for the purpose of inducing a large number of growers to commence early preparations for competition, we may be allowed to say that if the Exposition is decided on, we cannot but presume that one of its special objects will be to bring together every breed and variety of American sheep—full-bloods and crosses—every kind of wool now grown in our country,—and that each will receive its due recognition. Indeed, we should consider it one of the most valuable objects of the exhibition, so far as growers are concerned, to obtain correct information as to the uses and comparative value of *all* kinds of American wool, the amounts grown and consumed, the utility of extending or diminishing the production of the different varieties or the introduction of new ones. And never has there been so opportune an occasion, as the proposed Exposition would furnish, to obtain this knowledge from authorized and responsible sources.

In the matter of awards we, for one, should favor the largest expansion. The mode adopted at the Paris Exposition of making a discretionary number of awards in a class—of making them in all cases of marked merit—would, in our judgment, on an occasion like the present, be far preferable to the narrower system adopted (perhaps necessarily) at our State Fairs, where only single first, second and third prizes are awarded in each division of a class. We consider the former system, especially where competition is large, the most just and satisfactory one. We have attended a good many Sheep Fairs, and seen a good many able and impartial viewing committees discharge their duties. Yet we have never seen one such committee act, without perfectly well knowing, in cases of very close and extensive competition, that if another equally able and impartial committee were called on to judge the same animals, there would be twenty chances to one that they would bring in different awards. Nay, if several such committees should act, without any concert or knowledge of each other's opinions, it would be very doubtful whether any two of them would exactly coincide in their decisions. While such is the fallibility of—or difference in—the opinions of the best judges, it would, we think, afford far better encouragement to the breeder or owner of sheep, who proposed to carry them a thousand miles for exhibition, to know that the comparative merit of all good sheep would be publicly passed upon and recognized, than to know that they must be adjudged one of the first three places, as individuals or pens, or receive no official notice whatever. A competent committee who might find great difficulty in selecting out, even to their own satisfaction, the three best individuals in a class, could scarcely err in selecting the twelve or twenty best, and in arranging them into, say, three orders or divisions of merit. Nor need this prevent animals of clearly superior excellence in either such division from obtaining their due priority by being placed first, second, third and so on in each division. Thus five rams in the same class and division might receive the first prize, or an equal prize, the only distinction between them being made by ranking them as 1st, 2d, 3d, 4th and 5th,—an equal number receive the second prize in the same way, and so on.

These are simply suggestions thrown out for the consideration of the "sheep men" of the country, and to call out their views for the guidance of their representatives in the National Wool Growers' Association. Should the Exposition be held, committees of arrangement will doubtless be appointed by both National Organizations to meet together at an early day and determine the modes of procedure. Those wishing to present any recommendations should make them, therefore, as soon as possible after the 27th inst., if the Exposition is then decided on. We speak our own views, and we have no doubt that of every officer of the National Wool Growers' Association, when we say that all such recommendations will be thankfully received and placed before the Executive Board for examination.

It may be well enough here to remark that the National Wool Growers' Association was not organized with any expectation that National Fairs would ever become one of its usual features. As a general thing the Fairs, for obvious considerations, had better be left exclusively to the States. But for the reasons given last week, a departure from that course would, in our view, be proper and expedient in the present instance.

Since writing the above we have received an official letter from the Secretary of the National Association of Wool Manufacturers in which he expresses much gratification on the part of the President of the Association and himself at the proposal that the growers invite the manufacturers to join in an Exposition, and he says:—"In order to carry out this plan it will be necessary for us to call a special meeting of our Association, which we propose to do for the 5th of December, eight days after your annual meeting." And he adds:—"It is my belief that no effort will be spared by the manufacturers to make this the most brilliant exposition that this country has ever seen of the products of a single industry. We hope it will be worthy of our two National Associations and lead to their perpetuity, so essential to the well-being of the woolen interests."

IMPORTS OF WOOL AND WOOLENS.

IN our issue of September 7th, we published a table of quarterly imports of raw wool, flocks and manufactures of wool into the port of New York in 1866, and the first quarter of 1867. We stated that we obtained our information "from an official and reliable source." The amount of imported wool was drawn from the books of the Assistant Appraiser, who appraises all imported wools, and was strictly correct for the quantity in invoices examined by that officer—but sheep skins with the wool on were not included, and there are therefore some discrepancies between the figures and those given below, obtained from the Custom House. But these discrepancies only show a greater falling off of imports of wool in the first quarter of 1867 from those for the same period in 1866.

To present a more general view of the import of wool and woolens under preceding tariffs—the uniform and rapid increase in the imports of woolens since 1860 and down to enactment of the present tariff, and the great though irregular increase in the imports of wool during the same period—we subjoin the following table, obtained from the books of the Custom House. We have deferred its publication for several weeks to obtain the imports in the second quarter of 1867, but falling in this (down to the present date) we delay no longer. From the information we have obtained, we conclude that the wool imports of the second and third quarters of 1867 will equal the falling off of the first quarter. The Tariff *works.*

Imports of Wool and Manufactures of Wool into the Port of New York from the 1st of January, 1857, to the 31st of March, 1867.

		Wool, Raw, except Flocks.	Wool Manuf'd.
		Pounds.	Dollars.
1st and 2d Quarters,	1857	4,609,370	11,840,962
3d and 4th "	"	5,813,054	15,911,646
1st and 2d "	1858	2,148,046	6,087,881
3d and 4th "	"	3,720,171	12,658,320
1st and 2d "	1859	13,555,437	17,534,173
3d and 4th "	"	7,521,850	18,878,022
1st and 2d "	1860	11,872,797	15,186,431
3d and 4th "	"	5,918,593	17,604,437
1st and 2d "	1861	5,355,181	8,111,096
3d and 4th "	"	7,922,128	5,829,588
1st and 2d "	1862	16,412,393	8,374,211
3d and 4th "	"	17,471,200	9,498,428
1st and 2d "	1863	27,999,134	7,859,518
3d and 4th "	"	18,986,096	14,272,294
1st and 2d "	1864	39,258,378	16,132,292
3d and 4th "	"	18,288,526	9,623,680
1st and 2d "	1865	14,351,099	8,408,889
3d and 4th "	"	14,578,013	26,898,857
1st and 2d "	1866	30,601,446	*24,200,176
3d and 4th "	"	6,995,751	*23,202,227
1st "	1867	5,242,315	*10,019,044

* These amounts were not received with the present table, but with the previous one published Sept. 7th. They then came from the books of the Custom House, and are doubtless correct.

Condensed Correspondence, Items, &c.

MR. DEARDORFF'S CUTS.—These have not been received by us, nor are they in the RURAL office. All cuts should be sent directly to D. D. T. MOORE, Rochester, N. Y.

RAISING LAMBS.—An English farmer, who has been farming in this country 35 years, writes us as follows:—"In raising lambs, nothing is so important as so to arrange matters that your lambs should all drop within one week, and in any week you should choose as best in the locality of the farm. I have raised many lambs for the London market, also for the New York market, and my plan has been attended with success. Thus, supposing I wished my lambs dropped in the *first week of April*, I go back *twenty weeks*, the time for putting the bucks to the ewes. Having ascertained that, *then for fourteen days previous to using the buck*, (the ewes being in fair condition,) I give each ewe half a pint of corn per day up to the time of using the buck. Then I divide my ewes into bunches of 50, putting them away from the others as far as I can, and put one buck to every 50 ewes. You will find that the corn has so invigorated the ewes that they are ready for the buck the moment you introduce him. There will be but little doubt that he will serve the 50 ewes within the first week, so that your lambs will all drop within the week you wish, thus giving you an even lot of lambs, and all ready for the market at the same time." Our correspondent doubtless writes of large mutton sheep. Half a pint of corn per day would be heavy feed for Merinos.

GOOD AND BAD CLOTH—"M. C. B." of Clinton, Mich., writes us:—"The undersigned having observed in the RURAL of Nov. 9th an article headed 'Good and Bad Wool,' would like to make a few suggestions. Having for some years been in the habit of buying factory cloth, I find that I have to pay a great price for it, and in some instances it is very poor, flimsy stuff. After it is made it looks very well for a time,—but after a little while the wearer is surprised to find that the outside or dressing wears off and shows a coarse, poor article; and farmers are obliged to sell their wool for so low a price, considering the price that they have to pay for the cloth, that they get no adequate return; or, to make the thing equal, they are obliged to make their wool weigh all that they can within the bounds of conscience. I do not wish to stand champion for all the dishonesty that is practiced in selling and fitting wool for market.—but I do think the manufacturers might with propriety take part of the lesson to themselves. I think there is quite as much dishonesty practiced in manufacturing wool as in growing and selling it."

REMEDY FOR PALE DISEASE.—By the sheerest inadvertence we published, week before last, a full blown advertisement, in the form of a communication from P. C. SWETLAND of Chesterville, Ohio, who claims to have discovered a remedy for pale disease. "I have got," says Mr. S., "the whole right to the medicine and to the *discovery of the disease.* There are two of us, and I have purchased his entire interest in it. I have applied for a patent, and if I succeed I will have territory to sell," &c. We scarcely, perhaps, need to say that we have no confidence in a remedy *thus announced*,—but we do say it, to the end that nobody may draw a contrary inference from our publication of it without dissent.

NAMES CLAIMED.—LOAN J. BURGESS of North Hoosick, N. Y., claims the names of Arcola for a ram teg, and Irene for a ewe teg. They are twins, got by Gold Mine, out of Little Queen. Both of the latter have received State prizes, and cuts and pedegrees of both have been published in this paper.

Dairy Department.

THE SECRET OF GOOD BUTTER.

THERE is no process of working or washing that will secure a good article of butter, or that will get all the buttermilk out till it has stood a short time, when it must be worked over the second time, after which it will keep a long time. Butter that has not been worked over the second time will not keep more than two or three days in warm weather. I don't care how much pains you take with it, the buttermilk that is left in the butter becoming sour, makes your butter rancid. I have bought and sold butter in this State, and know what I am talking about; and here is where the trouble begins, you are bound to sell all the buttermilk you can, and so long as dealers pay as much for buttermilk as they do for a nice article of butter we cannot expect you to do much better. I am satisfied that there can be just as good butter made in Indiana as is made in the cheese and butter regions of the Eastern States. But just so long as we pursue the suicidal policy of selling buttermilk with the butter, so long our butter will be quoted in Eastern markets as Western grease.

ABOUT COLORING CHEESE.

THE Utica Herald quotes from a letter from Sir JAMES MONTEITH to the Ayrshire Express, in which the practice of coloring cheese with anotta or scarlet vegetable substances is strongly condemned. It is not disputed that coloring improves the appearance of the cheese, but it is claimed that the matter used to raise the color is deleterious to the health of consumers. Besides, he asserts that the coloring matter used prevents the cheese ripening for a long time for the market. To this the Herald adds:—"We have no doubt that vegetable coloring matter of various descriptions may have an injurious effect upon the curd. Granting that may all be true, the practical dairyman has hardly suspected it. He knows that the early ripening of cheese depends, for the most part, upon its manufacture and curing. Thus, by care in manufacture, light salting and comparatively high heat in curing, a cheese highly colored with anotta, may be ripened for the table in thirty days, or even twenty days from the press. One great objection which the English urge against the American cheese is that it ripens too quick and goes to decay too soon. If color would arrest the process of ripening and decay, that might be claimed sometimes, perhaps, in its favor."

DAIRY ITEMS.

American Chedder.—F. W. COLLINS of this city, exhibited, at the late State Fair, a sample of cheese made on his farm in Otsego county which he christened "American Chedder." The Committee say of it:—"This cheese is in small sizes, varying from nine to twelve pounds. The skin of the cheese is very thin, while it is so close and impervious to the air as to hold the inside of the cheese soft and in good condition. This cheese we look upon as a great and valuable addition to the kinds made in our country." This opinion was backed up by a very handsome special premium.

Keep the Cows in Heart.—The editor of the Practical Farmer, Philadelphia, alluding to farm stock, especially milch cows, timely and truthfully remarks that "*uninterrupted* thrift at all seasons with all domestic animals should be the motto; and this depends on constant care and oversight" combined with a practical understanding of what is proper to be given to keep animals in good heart. With cows giving milk this oversight and care is of prime importance, as without it they will fall away in flesh; the flow of milk will diminish, and the profits expected to result from keeping them fail of realization.

Salt for Butter.—It has been the general impression, till within a brief period, that Ashton salt was better for use in making butter and cheese than Onondaga or any other in common use. At the recent State Fair there were a large number of packages of butter submitted to the inspection of the Committee on the article, some cured with Ashton and others with factory filled Onondaga salt. In their report the Committee say:—"We have no doubt that for the preservation of butter the factory filled Onondaga salt has no superior; and we think that this careful and rigid examination must satisfy our farmers that they can safely rely on our own domestic salt, made purposely for the dairy; and if there is any failure in the butter they will have to look to other causes for that failure.

Poor Butter.—Owing, probably, to the dryness of the season and the consequent short crop of pasture grass the quality of the butter coming to this market, the present fall, has, as a general thing, been much below the average quality. This is the statement of some of the more prominent dealers in the article and the cause of the general deterioration is the one here assigned. But, whether good or bad, the price is such as to give a majority of consumers a griping about the region where the purse is secreted.

The Poultry Yard.

THE THANKSGIVING TURKEY.

As Thanksgiving is rapidly approaching—a day closely associated with a prominent American bird, the Turkey—we give an illustration of one of these autumnal martyrs as suited to the time and season. In honor of this bird it may not be inappropriate to state that while the subject of selecting a national emblem was under discussion, BENJAMIN FRANKLIN suggested the propriety of assigning that honor to the Turkey—a position finally accorded to the more ravenous and aspiring Eagle. Of course our readers appreciate the excellence of the Turkey for the table, and will see to it that the birds are properly fitted to grace the destiny to which they are tending.

THE CRISP-FEATHERED FOWL.

THIS singular appearing fowl is supposed to be a native of Southern Asia or the East Indies. The curious appearance of its feathers, which are crisped and project outwards, as though they had been rubbed and ruffled in the wrong direction, has undoubtedly suggested its name. BEMENT says:—"This variety of fowl does not appear to possess any peculiar advantages, and is more interesting as a curiosity than valued for any practical purposes. The hens are not good layers, and their eggs are small, averaging little more than two ounces in weight. They are said to be good mothers, breed freely with other varieties, and the offspring is hardy and prolific."

POULTRY.—FIVE YEARS' EXPERIENCE.

A CORRESPONDENT of the Iowa Homestead, having devoted five years to the business of poultry raising, arrives at the following conclusions in reference to the Brahma fowl:

1.—The knowledge that these fowls are unequaled as winter layers.

2—That their eggs average larger and richer than those of any other breed.

3.—Their home-like domestic qualities qualify them for confinement in small yards, which with little or no disposition to roam, make them a desirable fowl for cities or villages.

4.—Their superior quality for the table cannot be denied. Kill and pick one and you will have something that will do for a meal for a fair sized family. One will weigh as much as two common fowls, and oftentimes more.

5—Their chickens are hardy, easily raised, and grow rapidly, and last of all, they are fine, handsome looking fowls, such as a man can take pride in showing to his friends.

These expressions will doubtless conflict with those of some others whose favorite fowls have a different appellation, but there is consolation in knowing that there is room for them to put in a plea for their favorites.

Rural Notes and Items.

A SWINDLING AGENT—*Mack at his old Tricks.*—Under date of "Racine, Wis., Nov. 16," Mr. W. G. ROBERTS writes us in this wise:

"Yesterday a man called on me pretending to be an agent for your RURAL, and his book showed that he had many names for your paper, beside mine, at $2.50 a year, postage free. He called himself *Parson* or *Pharson*. I saw a man from Iowa who says that there was a person there awhile ago in the same business, but there he went by the name of *McPherson*. Now, will you be so kind as to drop me a line, stating if he has sent you my subscription, and that everything is all right,—so that I may take a little care of the *sleek, longuey gent*, and try to find him *lodging* at the expense of the County if he is an impostor."

This *McPherson*, with several aliases, is a swindler, and has operated as a pretended agent for the RURAL nearly every winter for many years. Taking advantage of the reputation and popularity of the RURAL, he first operated in Canada West, getting several hundred subscribers in passing from Queenston to Detroit—pocketing the money and never sending us a dime or name. We next heard of him in Michigan and other Western States—then again in Canada. We once spent some fifty dollars in trying to catch and cage the scoundrel, but he *skedaddled* into the "confederacy," or elsewhere. We are now "after him" again, having telegraphed Mr. R. on receipt of above note. Though it's like unto the preacher talking to his attentive listeners about the wickedness of absentees, we again caution our readers to beware of this *McPherson*, and all other pretended *traveling* agents—for, as we have repeatedly stated, no such agents are employed by the RURAL NEW-YORKER. The only *safe way* to secure this paper a year is to remit $3 direct to us, or join a club being formed by some one you know—or form a club yourself.

SHEEP IN THE SOUTH.—A South Carolinian mentions in the Monthly Agricultural Report his experience with a few sheep His land was in Marion Co., and twenty-two sheep were put upon it last season. During the winter they were sheltered only on two occasions—once during a snow storm in January, and the same in consequence of a cold rain. Their food for a year, which was grass in the summer and cotton seed in the winter, together with salt, cost about $6.50. The wool was worth $25, and sixteen lambs worth as much more. The cost of keeping each sheep was about 28½ cents.

THE BEST POTATO.—Mr. JAMES LEONARD writes the N. H. Mirror and Farmer about potatoes. Having cultivated a great many varieties, some of them quite good, he gives it as his opinion that the Boston Red is the best variety extant. It is supposed to be an old potato; is of a rich, good flavor, and "keeps fresh and sound the whole year round." The only objection to it is a tendency to break open too soon after the process of cooking commences. It has a resemblance to the Davis Seedling, but is considered a better potato. On good soil it yields well and is less subject to disease than many other varieties.

AMERICAN DAIRYMEN'S ASSOCIATION.—The next Convention (or meeting) of this Association will be held at Utica, N. Y., Jan. 8—9, 1868. The address will be delivered by Prof. WILLIAM H. BREWER of the Sheffield Scientific School, Yale College. The subject will be "Cattle Breeding in its Relations to Dairy Farming." Those desiring information in regard to the discussions at the Convention, can obtain it by addressing G. B. WEEKS, Esq., Sec'y, Verona, N. Y.

A CHANGE OF BASE.—A correspondent of the Maryland Farmer proposes to substitute plowing matches for mock tournaments and base ball games, as a more healthful and profitable employment than either of the others. A plow manufacturing company in Baltimore seconds this motion, and promises a superior plow to the winner in the first contest for superiority.

AMERICAN POULTRY SOCIETY.—We have received the premium programme of this Society, which is to hold its first fall exhibition at Masonic Hall Lecture Room, No. 112 East 13th Street, New York, commencing December 3d, and closing on the evening of the 6th. The premiums are numerous and liberal.

The Publisher to the Public.

The Price of the Rural.—If any one objects to the price of the RURAL, please ask him or her to compare the paper in Contents, Appearance, &c., with any similar journal, weekly or monthly,—or with any reprint of a daily or trashy literary paper. State the FACT that the first cost of the RURAL (for Editorial and other Contributions, Engravings, &c., &c.) is far greater than that of any of its contemporaries,—and moreover that it is far cheaper now, at $3, than it was at $2 before the war, compared with the prices of provisions, clothing, etc. A little examination and figuring will satisfy any candid, intelligent person that the RURAL NEW-YORKER is really the cheapest paper of its class.

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the RURAL. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent. Our premiums are liberal and sure. Send for the list, which (together with show-bill, prospectus, &c.,) we send free. A little effort will secure a good club in almost any locality, and this is the best season to make the effort. Reader, will you please see that the matter is attended to in *your* neighborhood?

Premium List, Show-Bill, &c.—Our Premiums to Club Agents are more liberal than ever before, but we have not space to give a list of them in the RURAL. Premium Lists, Show-Bills, Specimens, &c., are promptly sent, free, to all applicants. Give us your address, and also that of any friends who may be disposed to form clubs, that you and they may see our offers of "Good Pay for Doing Good."

Our Club Rate.—The lowest Club Rate of the RURAL is $2.50, and if any agents offer it for less they must pay us that price. *Our* rates are invariable, and none are authorized to depart from them—though of course we cannot prevent agents from doing so, or even giving away the paper; that is their business.

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly.

Local Club Agents.—We want a live, wide-awake agent for the RURAL in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

How to Remit.—The safest way to remit for the RURAL is by Draft or Post-Office Money Order,—and either of these, if made payable to his order, may be sent at the risk of the Publisher.

HORTICULTURAL.

COVERING GRAPE VINES FOR WINTER.

All vines set last spring should be covered and protected for the first winter. This is important, and we know of instances where thousands of dollars' worth of high priced varieties have been lost for lack of this simple precaution. It is not a question of hardiness, for vines that are most distinguished for this quality often suffer exceedingly if exposed during the first winter; their period of growth has not been long enough to establish them thoroughly in the soil and impart their natural vigor and endurance. Soil is the best, cheapest and most convenient covering material; straw, leaves, or any litter that may afford a harbor for mice should be avoided, and in covering with dirt especial care should be taken to leave no holes near the vine or its roots, in which water may collect and stand. As the vines are to remain covered until the period of pruning is passed, this operation should be performed at the time of laying them down. Then coil the vines around the stock as closely as possible without injuring them, and cover with a sufficient depth of soil to prevent the storms of winter from laying them bare. It is not freezing which injures, but the sudden changes of temperature. Another advantage gained by covering is protection against frosts in the spring, as the buds are held back and do not push as early as if unprotected.

APPLE GROWING—PRODUCTION, PROFITS.

[As promised in a previous number of the Rural, we give below a synopsis of the opening address of Maj. Brooks at the Discussion on Apples, on one of the evenings at the recent State Fair. It is both spicy and instructive, and will well repay a careful perusal:]

Maj. Brooks prefaced his remarks by saying, "If wars cease according to prophecy, if the conditions of health shall receive respectful attention from all who are not ready and willing to die, if doctors get into a way of curing people, the world will soon be very full of inhabitants, and it will take a great deal to feed them."

The food question is the pressing question of all times, and should be considered, first, in reference to an abundant supply; and, secondly, in reference to *quality*. He denied that population would ever *necessarily* be "limited by the means of subsistence;" famine should not fix the bounderies of human life. He said God's laws for the increase of our species are in exact harmony with His laws for the development of sustenance. Some may shut themselves up in stone walls and die of starvation, but Nature's great storehouses, Ocean, Earth and Air, are full to overflowing with materials for man. It is our business to develop them, so that all who come may be fed and clothed. This beautiful world—*portal of the world beyond, and all it offers*,—should never be closed against any by sloth, improvidence, or crime. Woe to the man who shuts the gates of being and of bliss! We are here to work for a common interest;—all our *titles* are *leases* during good behavior. I advocate the enlarged cultivation of apples, because I believe that by no earthly process can so much food for man or beast be extracted from four square rods of ground, as by planting an apple tree in the center and giving it good cultivation. If this is so, the apple may become the *great fruit of the future*, as indeed it is of the present, from its ability to feed a great many people from a little land.

Maj. Brooks next compared apple products with the best yields in other departments. Gen. Mills, on the Genesee Flats, raised forty-seven bushels and eleven pounds of wheat to the acre on eighty acres. Capt. Scott of Covington, Wyoming Co., raised in 1822, *fifty* bushels of wheat to the acre on ten acres; it was drawn to Albany on wagons. Simon McKenzie of Caledonia, reached about the highest limits possible, *sixty* bushels to the acre. Gen. Mills raised 115 and John Sheldon 116 bushels of *corn* to the acre, near Mt. Morris. Four hundred bushels of potatoes were not very uncommon at an early day. Paul C. Sprague of Wyoming Co., on a fraction over one-eighth of an acre, raised one hundred bushels of potatoes, it being at the rate of *seven hundred bushels to the acre*. Onions have reached about the same figure, and Lyman B. Langworthy of Rochester, raised about twelve hundred bushels of carrots on an acre.

To be liberal, I will call wheat 60, corn 140, potatoes 700, and carrots 1,400 bushels to the acre. If any gentleman present has heard of bigger yields please name it. No one speaks. These rates give 1¼ bushels wheat, 3½ bushels corn, 17½ bushels potatoes, and 35 of carrots to four rods of ground. Now see what an apple tree has done. Maj. Bumphrey, Rochester, informs me, (and he has probably acquired a habit of telling the *truth*, for he has not been a *political editor* in a great number of years,) that he knew a tree in Massachusetts that gave in a single season 75 bushels of apples; and you will bear in mind that they grew on about four rods of ground. We have, then, seventy-five bushels of apples, occupying the same amount of land as 1¼ bushels of wheat, 3½ of corn, 17½ of potatoes, and 35 of carrots, estimating these crops at about the highest yield possible. Are not apples ahead? But I am not done yet. Colonel Hannum, a prominent and reliable citizen of Genesee County says he picked in Massachusetts apples for ten barrels of cider, being *eighty bushels* of apples, from a single tree, and A. J. Downing, in his Fruit Trees of America, informs us that 121½ bushels of apples grew on a single tree, in a single season, in the same State! I do not believe there was ever a grain or root crop from the same amount of ground, that ever made even a near approach to that, estimating the value of each for food.

I have taken *extreme* cases; but comparing ordinary yields, apples still maintain their supremacy. Beets or carrots cannot compete with apples, on account of the great expense of growing them; an ordinary yield of corn is about 35 bushels to the acre, and of apples about 160 bushels, or four bushels to the tree. Here we have 4½ bushels apples to one of corn; fed separately, I think corn is worth the most, but I will give a bushel of corn for 4½ of apples, for the purpose of mixing with grain rather than feed it to hogs clear, as all animals require succulent food.

When we consider that orchards are generally cropped with grain or roots, and do not really appropriate one-half of the land they are reputed to occupy, the comparison turns decidedly in favor of apples; and when, further, in these times, we bring into the account the great additional expense of growing the corn, all its claims to equality vanish out of sight. Corn, I think, comes nearest being a rival of apples. I compute the actual cost of raising a bushel of *wheat* to be as great as to raise fifteen bushels of apples.

Let us turn to the growing of apples for market. If a better apple country than Western New York was ever made, I never heard of it. Here the apple tree is hardy and healthy, and the fruit comes nearest perfection. Further North the growth is not free and fair; further South and West, if the flavor is as good, the texture is coarser, and its keeping qualities imperfect. Chicago dealers have a well known preference for our fruit. Mr. Bennet of Boston, informs me that New England fruit is failing, and advises us to plant largely of Russets, Baldwins, Greenings, &c., with full assurance of good prices and an increasing demand.

Let us look at profits. A great majority of orchardists estimate that Western New York trees yield an average of one barrel to the tree, besides culls. The average price on the Genesee Valley Canal for the last ten years has been $2 in the fall and $2.80 in the spring. This gives (at forty trees to the acre,) $80 per acre in fall, and in spring $112. The average yield of an acre to grass would not be more than $12 per annum, and of wheat or corn $25 for the same period. Tobacco, hops, the small fruits, &c., *with a great outlay of labor*, sometimes do as well, but they are an uncertain dependence; they must receive very prompt attention, require many hands, and a great outlay for labor; most of the small fruits are very perishable, and must be thrown upon the market at once, however depressed. However favorable this comparison for apples, I boldly claim that it would be still more favorable if apples received good cultivation;—*the apple crop might in this way be doubled.*

You well know that some trees do remarkably well when they have a fair chance; a tree in Middlebury gave eleven barrels of apples; four trees in LeRoy thirteen barrels each; fourteen barrels were obtained in Bethany, and fourteen barrels Baldwins were taken by Patrick McEntee of Perry, from a single tree, and sold to A. W. Wheelock for $60. Enos Wright sold from two trees $100 worth of apples. Two years ago Mr. Hammond, Supervisor of Middlebury, sold the product of thirty-three trees of Northern Spys for $900. Edmund Morris, of New Jersey, the admirable author of "Ten Acres Enough," (who, by the by, with the usual consistency of *preaching farmers*, has added *thirteen* acres to his "ten,") wishing to do some tall bragging, tells of twenty apple trees that produced one year $225. Now I have a story about twenty-two trees owned by Robert McDowell, York, Livingston Co., N. Y., grafted nineteen years ago to Dutch Pippins, Greenings, Russets, &c., standing thirty-five to forty feet apart, and sheltered by woods on three sides, the ground being annually plowed and manured thoroughly—soil sandy loam. He sold from these trees, reserving his culls, in 1865, 163 barrels of apples for $779.50. Chas. Cronkhite sold the apples, unpicked, on less than four acres lor $1,000; they were re-sold for $1,500. S. J. P. Smead of Bethany, Genesee Co., from *six acres* (soil, clay, and strong clay loam,) sold as follows:

1862	750	barrels for	$ 2,370
1863	590	" "	1,790
1864	600	" "	2,100
1865	810	" "	4,500
1866	157	" "	863
1867 estimated at	600	" "	3,000
	3,507		$14,623

Add to the above, copied from his income report, apples reserved for family use, and we have 100 barrels to the acre, and 2½ barrels to the tree annually for the whole six years! and paying him annually $400 to the acre. For practical cultivators there is another fact of great significance. This same orchard, after coming into full bearing for some ten years, received only *ordinary care*, and its returns were comparatively light. It was then heavily manured and plowed shallow, and remained in that state one year, when it was cross-plowed and dragged, and suffered to lie two years longer, and *all the time uncropped*; then it was manured again and the same treatment repeated. The results I have given you.

S. P. Lord of Pavillion, bought a *neglected*, and, of course, an *unfruitful* orchard of *seven acres*,—trimmed, manured and plowed it,—when it immediately commenced bearing, and during the next six years yielded him six thousand dollars. If this is not evidence tending to show that *good cultivation would double our orchard products*, I confess I do not comprehend the *nature* of evidence, and yet in my town it is well known that I am a Justice of the Peace in full blast!

You can read in the New Testament of an ancient cultivator that had got it into his head that digging and dunging a tree might help it. The faults of ordinary management are, first, the impoverishment of the soil by promiscuous cropping, and the withholding of mineral and other manures; second, no trimming, or "*bad trimming*," which my friend, J. J. Thomas, thinks is worse than no trimming. Trees have a tendency to produce a surplus of wood; if it all remains, the branches are feebly nourished, and some die of starvation, after robbing the others. I think that most trees need to be renewed, like grape vines, by an annual and moderate removal of small and superfluous branches—never large ones. I will add that trees when young show an inclination to branch low, which, I think, ought to be respected. Low heads greatly favor picking. Mr. Francis of York, picked from low trees thirty-two barrels of apples in a day. Low branches mulch the ground partially, and in a degree obviate the necessity of plowing.

The third great fault is the omission to fork over the ground, or plow it light, often succeeded by *deep and reckless plowing*, to the injury of the roots, and often the destruction of the tree. When the ground is regularly plowed every year or two, and at a uniform depth, the roots will establish themselves below the plowing, and if the soil is deep they will do very well. But if cultivation is omitted for several years, the *roots indulge their natural habit of running near the surface*, and then deep plowing destroys many of the trees' best supports. This is especially so on hardpan and cold, tenacious sub-soils, which drive the roots to the surface. I beg pardon of the Pomological Society, but I believe the roots know better where to go than any man can tell them. Nature's method of cultivation is by *covering the ground with leaves*, at once manuring the soil, and making it light and acceptable, as no other process can. *Mulching*, where leaves and litter can be obtained, is a wonderfully cheap and beneficial expedient, and in my opinion may well take the place of *plowing*, and the attendant *cropping*, which has doubtless done much to render a majority of our orchards unproductive.

I am satisfied by diligent inquiry that all very large yields come from an unusual amount of nourishment; the tree, by an adroit strategic movement, had backed itself up against a fence, a wood-pile, a morass, a barn-yard, a building, or something that would shield one side at least from its *remorseless plunderer, man*, and give it something to eat. A tree in Maryland, standing *in the yard near the house* of an old Governor, bore sixty bushels of apples. The tree described by Col. Hannum, bearing eighty bushels of apples, grew along-side of a *swamp, where were deep deposits*. I do not recommend large applications of barn-yard manure, but a *regular supply*, and a *variety* of other fertilizers, including ashes, lime, plaster, charcoal, bone dust, muck and, better than all, sods and soil from fence corners, road-sides and forests. The best of our virgin soils are more perfect than any art of man could ever make them. *We should beware how we rob them of essential elements by promiscuous cropping.*

Whoever embarks extensively in fruit culture should count the cost. He should be determined to watch and destroy insect enemies, supply all needed fertilizers, prune systematically and carefully, dig about his trees, plow shallow, or supply a dressing of leaves or other litter. All the land even in Western New York is not well adapted to apples. Light soils, or very tenacious clay, should be avoided; a strong clay loam is the best. There is not a great difference in the exposure, but the Southeast is preferable in this section.

Maj. Brooks cited Bennett, Rand & Co. and Curtiss & Co., of Boston, and Webster & Co., formerly of Milwaukee, extensive apple dealers, to show the superior quality of Western New York fruit, and especially its keeping qualities. He then brought forward distinguished medical authorities to prove that good apples were "eminently fit to be eaten;" in fact, should constitute a large portion of our daily food. He read letters which he had received from John H. Griscom, M. D., of New York city, and James P. White, M. D., of Buffalo, certifying that the apple, besides being nutritious, acted favorably upon the "biliary and other digestive functions," was an antidote for dyspepsia and other ailments, and should be supplied in much larger quantities as food for the people. He quoted Dr. Jackson of Dansville, Dr. Campbell of Avon, Drs. Hill and Gay of Buffalo, and Charles Downing, Esq., of Newburg, in favor of the enlarged cultivation and use of apples, and concluded by saying: "The apple, by its unparalleled productiveness, "its patience under abuse, its value as food, the "small labor required in its cultivation, its high "price in market, and the remarkable adaptation of our soil and climate to its growth, *is "worthy of more extended cultivation.*"

MAMMOTH APPLE TREE, (RHODE ISLAND GREENING,)
THAT PRODUCED TWENTY-SIX BARRELS OF FRUIT THIS SEASON.

Some three weeks ago Mr. N. R. Davis, of Youngstown, Niagara Co., N. Y., sent us a photograph (from which the above engraving was made) of an apple tree "bearing twenty-six (26) barrels of R. I. Greenings this season, as certified by the following named Committee, appointed to see the fruit gathered, viz: B. M. Root, retired physician; A. H. Skinner, practicing physician; Geo. Swain, Ex-Sheriff of Niagara Co.; Ira Reed, Dep. Collector of Customs." Mr. Davis stated that he held twenty-four barrels of the fruit at $4 per barrel (having sold part at that price,) and two barrels of culls at $2 per barrel,—making the amount for fruit produced in one season just $100!

Immediately on receipt of this letter we wrote to Mr. Davis for further information, asking as to the size of the tree, its age, attention or culture given it, etc.; also ordering a barrel of the fruit, and requesting a copy of certificate of Committee. In response, Mr. D. sent us a barrel of the apples, (very fair and well grown fruit,) and replied to our inquiries as follows:

"In reply to yours of October 30, would say that our Greening tree, bearing this year twenty-six barrels fruit, is over fifty years old. The trunk of the tree is about six feet in circumference. It is forty-four feet in diameter from extremity of limbs, and the extremity of the limbs is 132 feet in circumference. The tree is about twenty-six feet in height. Has had fair to good cultivation—nothing extra. The certificate of Committee was forwarded to Maj. H. T. Brooks, Wyoming Co., through I. S. Woodard, Esq., Hess Roads, Niagara Co. I presume this has been forwarded to you ere this. [It has not arrived.—Ed.]

"The farm was owned by Judge DeVaux, of Niagara Falls, some fifty or sixty years ago. There were about one hundred apple trees set, which at that time was thought to be rather an extravagant orchard. Most of those trees are now vigorous and healthy, and are very fine bearers. From ninety trees we have realized over six hundred barrels of apples this year. There are about 140 trees in this old orchard, some of which are not over twenty or thirty years of age, and not in bearing this year. For the past twelve years it has been cared for by its present occupant, and has been plowed and seeded either to oats, peas or buckwheat; has had a fair amount of manure."

Such is the history of the tree represented, as furnished us by its owner. We presume the statements of Mr. D. to be correct, and that the report of the Committee will confirm the same in regard to the quantity of fruit grown. Hence, we beg to call the attention of our Special Contributor, Maj. Brooks, to this "confirmation strong" of his assertions about the culture of the Apple in Western New York, (made in his address at the State Fair, and published on this page,) and to challenge apple growers in any section of the Union to furnish us the figures in regard to any tree which shall equal that of Mr. Davis in the quantity, quality and value of its fruit.

of the old and cheap sorts,) there would be less pockets fleeced and less disappointments to the purchaser of such. You will allow me to say, in answer to Doolittle's fling at me and my business, and self-praise of his own, that my books will show no order received from him for Mlamis and strawberry plants a year ago last spring, and that no plants have ever been sent out from *my* grounds that were "rotten when packed." If he has received a bill of plants from me, and had notified me on their receipt of such plants being in the box, they would have been duplicated at once.

If I thought it good taste, I might show the very bad success I had with a large bill of "Doolittle's" (!) (rightfully speaking of the "Joslyn,") I received from him a few years since, showing what the style of packing was and the character of the plants received. Suffice it to say, I am willing to compare correspondence received with him or any other party to show the satisfaction given to customers with plants sent out. At present, at Purdy's Fruit Farm, near Palmyra, N. Y. A. M. Purdy.

A FLORAL CURIOSITY.

The Alta Californian describes an "Everliving Rock Rose," or, as the Mexicans term it, *Siempre vive*," found in Lower California, as follows:

"There is a plant found among the rocks and mountain fastnesses of the interior of the Territory, of so singular a character as to deserve special mention. It bears among the Mexicans the appropriate name of '*Siempre vive*,' (always alive.) It is small, scarcely ever reaching the diameter of your hat rim. It has no stalk, except when it blooms—which, I think, is but once a year—and then a delicate stem rises from a center of emerald formed by closely lapping leaves which spread out near the ground almost horizontally. This stem rises to the height of a few inches and bears on its apex a cluster of delicate flowers, sometimes of white and sometimes of scarlet color. Its chief singularity, however, is to be found in its wonderful vitality, which makes it seem almost a sentient being. It disdains all terrestrial aid, and flourishes best where the rocks are the loftiest and most precipitous, and where is to be found the least quantity of soil. They have but little root, which is satisfied with an interstice supplied with a handful of dry sand. They draw their sustenance entirely from the air and from the dews nine months of the year. During the remaining three months, the only ones we are favored with rain, an occasional shower deepens the emerald. When severed from the rocks they quietly fold themselves up 'like the tents of the Arabs,' and wait for years, if called upon, for the drop of water which is to furnish their natural sustenance. After lying in a dry box for many months without a particle of soil attaching to their roots, they will unfold in twelve hours after being placed in a bowl of water, spread their fan-like leaves, and resume their natural green."

THE VALUE OF CABBAGE.

The Southern Cultivator contains an article on the comparative value of various kinds of food, and, among other farm products, compliments the cabbage thus: — "It has been chemically examined, and has been found to be richer in red flesh forming matter than any crop we grow. It contains more fibrine, or gluten, of which substance the muscles are made, and hence is richer in the materials essential to the growth and strength of animal life. Wheat contains about 12 per cent., beans and peas about 25, and dried cabbage about 35 per cent. of this all-important material. It appears from careful analysis, that the young plant, before being headed, or outside leaves of those that have formed solid heads, are much more valuable for feeding stock than the white center of the full grown vegetable, and therefore the most nutritious, if not the most desirable, for the table. From the fact that it is so rich in nitrogenous matter, it deserves more extensive cultivation. It stands a hard frost; is very productive; for milking cows, it increases the flow of milk and its quality, and butter made from it is free from unpleasant flavor."

New Advertisements.

SEND FOR "SOMETHING NEW."—PAYS $5 to $7 per hour. Send three stamps and get SAMPLES free, that sell for $6. Address HOSEA B. CARTER, No. 2 Peak Square, Hampstead, N. H.
☞ 35,000 SOLD IN TEN DAYS. ☜

IMPROVED CLOTHES DRYER—AGENTS WANTED—Sells readily for indoor use—every housekeeper wants it. Agents are making $10 per day. Send two 3 cent stamps for circular or sample Dryer by Express for $1.50. L. W. DISBROW, General Agent, Honeoye Falls, N. Y.

AGENTS.—LLOYD'S $100.000 REVOLVING DOUBLE MAPS OF EUROPE AND AMERICA are just out; only $4. 3,000,00 names on them. "How to canvass well" sent. Ladies and men $20 a day made. J. T. LLOYD.
No. 23 Cortlandt St., New York.

FARM FOR SALE.—A desirable Farm of 120 acres, well stocked with choice fruit; good buildings; well watered, and good timber lot; lying in Penfield, 7½ miles from Rochester, on plank road. Terms easy. For particulars inquire of the subscriber. A. P. ROSS, 100 Monroe St., Rochester, N. Y.

FIFTY Persons in every town wanting the Best Fireside Monthly, full of good Reading, Instruction, Amusement, "Gayeties and Gravities," should send for the "Household Messenger," London Ridge, N. H. Specimen Right A Volume, post-paid, only FIFTY CENTS.

A GOOD FARM FOR SALE.—I Want to retire from farming and offer to sell my farm of 175 acres of choice land, (known as the Bradish farm,) under high state of cultivation, good improvements, forty acres of wheat on the ground (well summer fallowed,) located on a good road 1½ miles from Batavia village, N. Y. Pay made easy, (to suit purchaser.) For particulars see the undersigned, on the farm, or address him at Batavia, N. Y. DANIEL PUTNAM.

LADIES READ THIS.—IT IS THE best chance ever offered to Ladies. We will give any person sending Clubs in our Great One Dollar Sale (the best in the country) a Silk Dress Pattern, Pair of Blankets, piece of Sheeting, Wool Long Shawls, &c. Send 50 cents and receive four slips and Circular, or send for Circular. Agents wanted everywhere. Ladies preferred. Address CUTTER & CO.,
901-4t 31 Exchange St., Boston, Mass.

WANTED—A GOOD EXPERIENCED Canvasser in every county in the U. S. To such, male or female, will guarantee $300 per month. Apply at once to C. RICH & CO., Poughkeepsie, N. Y. 901-tf

SENECA BLACK CAP vs. MIAMI.

Doolittle's proposition accepted and Weeks notified. Now, I hope the readers of the Rural, and all others interested in fruits, will watch for this decision. As for myself I shall cheerfully pay the amount I agree to if the "Seneca" is decided the best, and would here say that if some such course as this was pursued with all of the new fruits brought out, (a large share of which prove worthless, or of no more value than many

Ladies' Department.

HAPPY WOMEN.

BY PHEBE CARY

Impatient women, as you wait
In cheerful homes to-night, to hear
The sound of steps that soon or late,
Shall come as music to your ear:

Forget yourselves a little while
And think in pity of the pain
Of women who will never smile
To hear a coming step again.

Babies that in their cradles sleep,
Belong to you in perfect trust;
Think of the mothers left to weep,
Their babies lying in the dust.

And when the step you wait for comes,
And all your world is full of light,
O, women, safe in happy homes,
Pray for all lonesome souls to-night.

Written for Moore's Rural New-Yorker.

A CHAPTER FOR HOUSEWIVES.

BEEFSTEAK AND COFFEE—WITH AN INTRODUCTION.

Mr. Editor:—I think a great many Rural readers would be very glad to attend the lectures of our interesting little French gastronome, M. Blot, and hear what he has to say on that very appetizing subject, cookery. But only a few of us are so near Cooper Institute that we can leave our households to listen to his instructive and chatty discourses. I hope the interest M. Blot is awakening among our city folks may extend to the ruralists, so many of whom have all the means at their disposal for setting the finest tables in the world. What a happy thing it would be for our American people if M. Blot could marshal a host of culinary reformers and send them on a "home mission" into all the kitchens of our Union! To make all our women skillful cooks would promote the comfort and well being of their homes far more than to take them all out of their kitchens several times a year and send them struggling up to the ballot box.

I do not entirely agree with M. Blot in all his views. Much of what he says suits the meridian of Paris, but becomes false reckoning at New York. Our climate is not the climate of France, and our people are not Frenchmen by descent or in taste. I do not suppose a hundred M. Blots, *blowing* with all their might, will ever induce the American people to become to any great extent soup eaters, or to abandon our well-known taste for good puddings. M. Blot is a strong believer in soups, and considers puddings a stupid and barbarous invention; but so inbred is the liking for this last dish, which taste we inherit from our English ancestors, that climate and nature must change before we relinquish it.

It is really surprising that eating such large quantities of fresh meat as we do, it so seldom comes upon any of our tables in such a style as to be at once the most grateful to the taste and most easily assimilated by the organs of digestion. We *read* of steaks that are rich, tender, juicy, delicious! How often do you eat one, Mr. Editor, unless at your own table? What a pity that while we are making so many sumptuary laws in this country we should not introduce a clause into the new constitution abolishing the use of frying pans. Why, dear me, Mr. Editor, if I ever *do* get a vote and get into any legislative body the first thing I shall propose will be an enactment prohibiting the unwholesome, unsavory and ruinous practice of quenching and smothering all the fine, delicate, sapid juices of beefsteak in a flood of hot grease. Yes, Mr. Editor, I shall go for putting down this abominable practice by law, for in truth I believe it has produced as much mischief as tobacco or tight-lacing.

Why can't we learn to broil our steaks, and have them crisp on either side, with a delicate rosy tint running down the middle? In the first place, in order to realize our ideal, we must begin at the meat cart. The habit with our butchers is almost universal of cutting their steaks just about one-third of an inch thick. Not all the line of French cooks from Brillia Savarin to M. Blot could take such a piece of meat and make good steak of it, though they might, with their inexhaustible culinary skill, convert it into something very good; for a thoroughly accomplished French cook will make a crow taste like a chicken. Until your butcher is fully drilled in your tastes and habits you must go to him and very pleasantly, but with firmness, insist that he cut *your* steak thick, no matter what he does for your neighbors. Not much less than an inch, no matter from which of the steak-yielding parts it is cut. In these days of high prices, the sirloin and porterhouse are delicacies beyond the command of most purses, but after numerous experiments and frequent calculation I have become settled in the conviction that when I buy a pound of good juicy *round* I am purchasing as much food as the cost of a pound will buy. Some people say they can't afford to buy beefsteak. The truth is, Mr. Editor, they can't afford to go without it. Beefsteak is like advertising—it costs and it pays; you are getting your money's worth.

Having procured steak of the proper thickness and quality, lay it in a clean earthen dish with a tight cover, to keep it from absorbing odors, and set it in a cool place until you are ready to broil it. If the weather is very bad lay a clean cloth over it and sprinkle dry salt on the cloth. This will be necessary during only a small part of the year. Just before your family assemble, and all the other dishes are ready, bring out your steak plate, lay a lump of butter in the middle of it, and set it where it will become quite warm. Have a fire of hot coals, (anthracite coal is better than any other fuel for this purpose,) and if the construction of the stove admit of it, though your fuel ordinarily be wood, remember to throw in about two quarts of small coals half an hour before meal time. As soon as the gas which emits the blue flame is expelled from them they are ready for broiling. Use a folding wire gridiron sometimes called a toaster, lay your steak on it, sprinkle both faces with a little black pepper, and place over the coals. The heat should be such as to crisp the side next the coals immediately. If it begins to burn, turn it, and keep turning it every half minute for about five minutes, or until each outside third is firm under the knife, leaving the middle third thoroughly heated, but not stiffened. Then put it upon the melted butter on the hot platter, adding salt to taste. Let the family be all at their places when this delicacy is served, and in cool weather let all their plates be warmed. Now, Mr. Editor, I will agree that if any of your readers, after following these directions closely, and using good butter, report a failure, I will furnish M. Blot's cook-book, or another one as good, gratis; for, as a woman and a housekeeper, I cannot wish a greater earthly boon for any of my friends than the satisfaction of pressing their forks into just such morsels of juicy, toothsome steak.

One more tit-bit of advice, if the length of this column will allow. I hope your readers all know how to make good coffee, but I am very much afraid that some of them do not even know what good coffee is. In the first place let me be earnest and if possible eloquent on this fundamental point. Let no one dream that she can make good coffee by using the abominable mixtures which are sold in those shiny square packages in the shops, "ready ground for use." Not a pinch of that detestable black powder ever saw the island of Java or the coast of Brazil. Would you sip ideal coffee, nectar fit for the gods, select your coffee raw, parch and grind it yourself; parch it very evenly, at first over a slow fire, and let the heat increase. Remove when it has the color and gloss of a ripe chestnut, and put immediately into a tight vessel. Allow for each person a large tablespoonful. Fifteen minutes before breakfast time mix with the ground coffee part of the white of an egg, adding a little cold water; stir it well together and add boiling water; let it boil from two to five minutes only, keeping the coffee-pot at the lid and spout as tight as possible. Let the milk be scalded, and place in each cup, if you can, a tablespoonful of cream. The milk and cream together should fill the cup at least half full. Then add the noble infusion; it will leap from the spout of your coffee-pot, showing the color of amber and exhaling the odor of musk.

If in the beginning you purchased the genuine Asiatic berry, and follow these ceremonials religiously, then will you set before your happy guests a beverage that will deserve the lofty encomium pronounced upon coffee by Anasari Djezeri Anbali, son of Mahomet:—"Coffee is as innocent a drink as the purest milk, from which it is distinguished only by its color. Linger with thy coffee in the place of its preparation, and kind gods will hover above thee and share in thy feast. Thus the graces of the saloon, the luxury of life, the society of friends, all unite to form a picture of genuine happiness. Drink with confidence, and regard not the prattle of fools who despise it without having felt its charms, and condemn it without foundation." L. E. L.

Stamford, Conn., Oct., 1867.

BE HAPPY.

A cheerful temper, a kindly heart, and a courteous tongue, can not be too carefully or too sedulously cultivated. On the other hand, a disposition to be gloomy and captious, to be bitter and ill-natured, to be cynical and slanderous, can not be too cautiously avoided. The one habit, too, is as apt to grow and become powerful as the other. If we permit ourselves to look constantly on the dark side, and to view every thing with distrust and jealousy, we shall seldom be able to realize and enjoy any thing that is bright, beautiful, kindly or generous. There is, moreover, nothing so calculated to impair health, deface beauty, and take away from the human countenance all those rosy, shining lights which are admirably suited to brighten and adorn, as a disposition to fret, vex, and be miserable. The soul is thus reflected through the human countenance, just as it is often mirrored in the eye.

A Good-Night Kiss.—Always send your little child to bed happy. Whatever cares may trouble your mind, give the dear child a warm good-night kiss as it goes to its pillow. The memory of this, in the stormy years which may be in store for the little one, will be like Bethlehem's star to the bewildered shepherds; and welling up in the heart will rise the thought: "My father; my mother—*loved me!*" Lips parched wtih fever will become dewy again at this thrill of useful memories. Kiss your little child before it goes to sleep.

A Happy Woman.—A happy woman! Is she not the very sparkle and sunshine of life? A woman who is happy because she can't help it—whose smile even the coldest sprinkle of misfortune cannot dampen. Men make a terrible mistake when they marry for beauty, for talent, or for style; the sweetest wives are those who possess the magic secret of being contented under any circumstances. Rich or poor, high or low, it makes no difference; the bright little fountain of joy bubbles up just as musically in their hearts.

An argument in favor of enlisting female soldiers, may be derived from the sentence of Montague, that "Men are generally more afraid of women, than women are of them."

Choice Miscellany.

HAPPIEST DAYS.

The clouds in many a windy track
Are sailing east and west,
And sober suns are bringing back
The days I love the best.

The poet, as he will, may go
To summer's golden prime,
And set the roses in a row
Along his fragrant rhyme:

But as for me, I sing the praise
Of fading flowers and trees,
For to my mind the sweetest days
Of all the year are these:

When stubbly hills and hazy skies
Proclaim the harvest done,
And Labor wipes his brow, and lies
A dreaming in the sun—

And idly hangs the spider on
Her broken silver stair,
And ghosts of thistles, dead and gone,
Slide slow along the air—

Where all is still, unless perhaps
The cricket makes ado,
Or when the dry-billed heron snaps
Some brittle reed in two—

Or school boy tramples through the burs
His tangled path to keep,
Or ripe mast, rustling downward, stirs
The shadows from their sleep.

Ay, be that wills it so may praise
The lilies and the bees;
But as for me, the sweetest days
Of all the year are these.

Written for Moore's Rural New-Yorker.

RAVELINGS.

BY T. RAVELER.

NO. II.—DEMONSTRATIVE PEOPLE.

I don't like demonstrative people. The sincerity of those persons who are continually making a great "to do" over everything, I am apt to question. Quiet, unpretending forms of expression are the most natural, and mean the most. The heart never gets up on stilts. When the hands and tongue do, the heart has little part or lot in the matter. That friendship which speaks only through warm hand-clasps, and inarticulate sympathy, is the truest. That sorrow which is breathed forth simply in low moanings, hushed to the falutest sobs, cuts deepest into the heart's core.

Demonstrativeness *in toto* is below par with me. If in love, I might bid high for repeated demonstrations of affection from my adored. Undoubtedly I should. But being in love, I have come to believe, upsets all a man's philosophy. Mine isn't upset. I look upon things without the stratagems which love seems so universally to cause. Therefore affectionate demonstrativeness—billing and cooing—in public, is my especial aversion. Why in the name of Cupid can't young ladies and gents do up all their tender business, if it's got to be done, at home, instead of parading themselves and their "pheelinx" directly in the face and eyes of everybody?

Amaranda and Augustus come into the car, and take the first seat in front of me. Of course any one with half an eye, even, can see that she is his Amaranda, and he her "dear Augustus." I am assured, at once, by the flow of conversation which they maintain, that they are not yet married, because married people don't think it worth while to talk to each other only at rare intervals; and I know they are approaching that catastrophe by the manner of both. Well, by-and-by the arm of Augustus rather bashfully creeps along the back of the seat until it finally encircles her sylph-like form, and Amaranda looks up into his eyes with such an expression as the countenance of a dying deer may be presumed to wear, and down goes her head, waterfall and all, upon his shoulder. Then the conversation dies away into whispers, or low articulations, or—ceases entirely. Quite as likely the latter. Why should he speak, when through his arm the electric message of love is gliding, and her form thrills in response? Why should she say aught when it is *his* bosom she is leaning upon?

Now, much as I dislike demonstrativeness in general, this in particular puts me in a terribly disagreeable humor. It reminds too keenly that I am a bachelor. And though I cling to my bachelorism, I am a trifle inconsistent, and feel for the moment that there are other mortals more highly blessed than myself. *I* haven't any Amaranda—why should *he* have? There isn't any pretty little simpleton of a girl to lean her head upon *my* breast, and look so touchingly, so harrowingly, into my countenance. The only feminine companion I ever have in my journey is an old maid aunt—Jerusha Forshrew—and any one who knows her will readily admit that she isn't just the person to enact one part of a love scene. I take her with me, now and then, for the same reason that I eat pickles. Something sour and sharp makes the sweets go down with a better relish. What soured my Aunt Jerusha, I don't know. She probably has her own story, and I leave her to tell it. Age alone hasn't made her what she is. For she's not the oldest, nor the most pinched-up old maid you ever saw. My mother was her elder sister by nearly a score of years. So my aunt has not seen so many more years than have I. If all the acids of life didn't seem to be feeding her nature, I should think she might lose some of her angularness, and, with a few of the artificial aids which they know so well how to use, come to rival many of her sex who pride themselves upon their youth and prettiness.

Aunt Jerusha doesn't make a bad traveling companion. But I don't want her with me always. Pickles are not good as a regular diet. When Amaranda and Augustus do the love scene I find my aunt's company less satisfying than ever. If a younger and more susceptible sat in her place, why, may be—but pshaw! I forget that I am not demonstrative. My coat sleeve would rebel against doing what that of Augustus takes so kindly to. And yet there was a time when—— Ah, me! May be, after all, that the tableau just in front of me is the more provoking because it sets me thinking of what never more can be.

The wisest of us have seen our foolish days. You will remember the time, my brother bachelor, when you sat in the arbor with *ma belle* Kate, and whispered sweet words into her willing ear. You were demonstrative then; and you told more thrilling things than your tongue was responsible for. Your time for telling all these has gone by. You have grown older, and, you think wiser. "Yes, we have all seen our foolish days, you echo,—and yet there's a bit of a sigh floats up from your heart as you think of yours. And your eye lights up with a tenderer glow than it has known in a twelve-month, at the recollection I have awakened. You thought life was a beautiful poem then. You have come to believe it only a dull, prosy essay.

——An essay. And is life any more? We essay—we attempt—all along through the years. Do we get further than this? Do we accomplish—do we complete? Always essaying—what have we done? The care of each day is to attempt to do.

"Sleep knits up the raveled sleeve of care."

So every waking moment is but an unraveling. And of what?

These ravelings of mine may be often broken and disconnected,—little bits of thread which I pick out, here and there, from the tangled web of a rambling and restless life. If I slip away from my pretended subject it will not do you any good to tell me to mind my knitting. Another has done the knitting—I'm only amusing myself by picking it apart.

—But about demonstrativeness. I have intimated that I have a dislike for it in general and an especial aversion for it in particular. Professions don't mean anything. Feeling is valuable only as it is delicate and refined. That brazen-faced sentiment which has no objection to an *expose* among outside lookers-on, lacks, it seems to me, the finer elements which would make it lasting. It is only a thing of the hour. Something of this philosophy I learned too young. The wonderfully sweet words of my step-mother—(may she rest in peace!) the tender accents which she gave to "*dear* Tommie," when there were visitors present,—I soon came to know were succeeded by others of a very different tone when we were left alone. From that time I lost faith in professions, and conceived a poor opinion of sugar-coated pills. There are too many sugar-coated things in the world that are dreadfully bitter and disagreeable at the heart. Gloze a mean morsel over with sweetness as much as you may, soon after swallowing it you will suffer from sickness at the stomach.

If love upsets a man's philosophy and makes him demonstrative, a dozen other things *shape* his philosophizing, and bend it to the same end. Ditto a woman's. Woman is of the human family, and has about all the little selfishnesses and personal purposes, spites and jealousies, ambitions and aspirations that man is heir to. Only they are done up in prettier parcels, and there may be a difference in the quality of the article. But demonstrativeness for a purpose is better than this sickly kind "my dear Augustus" indulges in. Philosophy upset isn't so good as that which is bent to a certain aim. On the whole, demonstrative people whose mainspring is either love or sorrow, are the ones to set little store by. Pretty Mrs. Widow lost her husband, and makes a great flourish of mourning. Of what account are her costly black dresses and very cheap tears? If she would pack her dresses out of sight, and shed her tears when people were not around, they would mean more. I always think, when I see her wiping her eyes at mention of her "dear departed," what a pretty town crier she would make.

No, let me reiterate, I don't like demonstrative people. That is, I should like them better if they would hide their demonstrativeness under a bushel, and not make such a parade of it. Especially the lovely kind. I may be like a certain retired actor. It is said of him that after leaving the stage he never could be prevailed upon to enter a theater. Indeed, he would not pass the door of one if he could avoid it. He did not wish to see what he could no longer take part in. Just my case, exactly. So let me adjure every Augustus to keep out of my range of vision when he and his Amaranda are fancying themselves "all the world." I much prefer that they should waste their demonstrative sweetness, or their sweet demonstrativeness, upon the desert air.

Pets.—Pets should always be tolerated, for they have their proper place in every household. If they furnish to the young imaginary play-fellows, if they help older people to forget the cares of the present, and soften in them the austerities of this hard world's life, if, above all, they can be made morally significant, let us not contemn them as unworthy of our regard. Frolicsome kittens, sweet singing birds, brave old dogs—and shall we not add merry-hearted children—have brightened and gladdened and sweetened this world to many.

"Forty years once seemed a long and weary pilgrimage to make. It now seems but a step; and yet along the way are broken shrines where a thousand hopes fade into ashes, footprints sacred under their drifting dust, green mounds where the grass is fresh with the watering of tears. We will garner the sunshine of these years, and with chastened steps and hope push on toward the twinkling where the waters are still and the storms never beat."

Sabbath Reading.

Written for Moore's Rural New-Yorker.

IN THANKFULNESS.

BY A. A. HOPKINS.

I fold my hands in idleness, to-day;
My heart is yielding its thank-offering.
"Of little worth am I, O Lord," I say;
"And little can I to Thine altar bring,
But that I fain would give to Thee always;"
And in my heart I chant a psalm of praise.

I backward look upon my life, and see
Above it, through the years, a Presence bent,
And know what came, of good or ill to me,
Was by that Presence in all kindness sent;
And if some joys I want, in thankfulness
My heart goes out for those I do possess.

The skies above me wear a sunny smile;
The clouds may come—it will not wholly fade;
And sunshine creeps into my life, the while,
With warmth such as but it and love e'er made.
My finer being feels a thrill divine
As on my way the pleasant sunbeams shine.

There may have been some cherished blessings lost—
I may have felt some momentary pain;
My will, by God's, may often have been crossed:
But losing much has only been my gain:—
And thankful for the lost, as for the won,
I fold my hands and say "Thy will be done!"

To-day is mine. To-day is very broad:
It has the fullness of the Infinite.
It reaches from my narrow life to God,
And holds within it a supreme delight.
It has the work, and partly the reward—
The rest will come to-morrow, praise the Lord!

THE GRANDEUR OF THE BIBLE.

If you have ever tried it, you must have been struck with the few solid thoughts, the few suggestive ideas, which survive the perusal of the most brilliant of human books. Few of them can stand three readings; and of the memorabilia which you had marked in your first reading, on reverting to them you find that many of those were not so striking, or weighty, or original, as you thought. But the Word of God is solid; it will stand a thousand readings; and the man who has gone over it the most frequently and carefully is the surest of finding new wonders there.—*Rev. James Hamilton.*

I have for many years made it a practice to read through the Bible once a year. My custom is to read four or five chapters every morning immediately after rising from my bed. It employs about an hour of my time, and seems to me the most suitable manner of beginning the day. In what light soever we regard the Bible, whether with reference to revelation, to history, or to morality, it is an invaluable and inexhaustible mine of knowledge and virtue.—*J. Q. Adams.*

When I commenced my duties of professor of theology, I feared that the frequency with which I should have to pass over the same portions of Scripture would abate the interest in my own mind in reading them; but after more than fifty years of study, it is my experience that with every class my interest increases.—*Prof. Leonard Woods.*

I have always found in my scientific studies, that when I could get the Bible to say anything upon the subject, it afforded me a firm platform to stand upon, and another round in the ladder by which I could safely ascend.—*Lieut. Maury.*

"I KNOW THY WORKS."

In all our changeful life there is no hiding-place where our Saviour cannot find us. Alike in the clear, bright sunshine, or in the darkening gloom of the winter storm, his eye is over his people, and his infinite knowledge weighs them in the balance. When the hill is steep, and briars and thorns grow up its steep ascent, he is watching the weary flock, and helps and pities them, as they strain up the mountain side. When the road lies through velvet lawns, and beside peaceful waters, the Shepherd gazes tenderly, yet fearfully, upon them, for these are the "Enchanted Grounds," where there is danger that the pilgrim fall into a fatal sleep.

Jesus knows the works of his people. He knows whether they are walking on the skirts of the dread forest of the world, or whether they are earnestly striving after a closer union to himself. He knows when they extend a helping hand to the pale children of sorrow, and when they shut their ears to the cry of the desolate. Their motives are all open before him. Men judge by results. Christ sees the secret spring.

Let the thought that our Maker knows our works stimulate us to do and dare for him. When the spirit is weary in well-doing, let it lift its eyes to Jesus, who went about doing good. In the hour of prayer let it take encouragement, because He who knows of its secret wrestlings will hear and sustain. Upborne by the everlasting arms, and looking to the Author and Finisher of our faith, let us press on to the joy that is set before us.—*Christian Intelligencer.*

Helping the Minister.—"I am past usefulness," said an old lady to her minister; "the Lord spares my days, but I can do no good now." "You are doing a great deal of good," said the minister. "You help me to preach every Sabbath." Of course she was very much surprised. Help her minister preach! "Why, how?" "In the first place," said he, "you are always in your seat at church, and that helps me. In the second place, you are always wide awake, looking right up into my face, and that helps me. In the third place, I often see tears running down your cheeks, and that helps me very much."

It is harder for a penurious man to be honest than for a gourmand to keep a fast.

The Reviewer.

THE PHILOSOPHY OF HOUSE-KEEPING: A Scientific and Practical Manual for the Preparation of All Kinds of Food, the Making up of all Articles of Dress, the Preservation of Health, and the Intelligent and Skillful Performance of Every Household Office. By JOSEPH B. LYMAN, Author of the "Prize Essay on Cotton Culture," etc., and LAURA E. LYMAN, Author of "Prize Essay on House-Keeping." [12 mo.—pp. 560.] Hartford: Goodwin & Betts.

THE question what shall we eat, and wherewithal shall we be clothed, immediately concerns every one. It is intelligently and attractively treated of in the handsomely gotten up book before us. This is not merely a cookery book. We have had enough of such. It covers broad ground, and treats of nearly everything bearing upon house and home keeping in a very sensible yet happy manner. Each of its twenty-six chapters is a well written essay upon some subject of deep importance to housewives, and the careful perusal of which would be of much profit. In works of a less scope than this, Economies of Dress, Infancy, Domestic Hygiene, Domestic Architecture and Ornamentation, &c., are not included, and these add very greatly to its value. If the book could be placed in every home, and its suggestions heeded, it would avail greatly for good; hence we hope it will have an immense sale. It is sold by Booksellers generally.

WAITING FOR THE VERDICT. By Mrs. R. H. DAVIS, Author of "Life in the Iron Mills," "Margaret Howth," etc. [8 vo.—pp. 361.] New York: Sheldon & Co.

There is unusual power in this book. It is a story of the late civil war, though it opens fifteen years before the contest began. In it the slaves of the South are delineated as they were when waiting for the verdict of the country—a verdict that should grant them all the glorious opportunities of freedom, or should shut them out from its possibilities forever. The delineations are drawn in a masterly manner. Dr. BRODERIP is, perhaps, the strongest character pictured. But for several notable illustrations of what the black man is capable of attaining to, we might consider his picture too highly wrought. In very many particulars this story is as remarkable as "Uncle Tom's Cabin." Its movement is sometimes abrupt, but there is always a rare grace in the sketching of details, and much vividness in the grouping of events, while the frequent touches of pathos are often exquisitely tender. In a certain sense the verdict of the nation concerning the negro is still unspoken;—popular perusal of this book might in some degree influence it. Sold by ADAMS & ELLIS.

SOUND. A Course of Eight Lectures Delivered at the Royal Institution of Great Britain by JOHN TYNDALL, LL. D, F. R. S., Professor of Natural Philosophy in the Royal Institution and in the Royal School of Mines. [12 mo.—pp. 335.] New York: D. Appleton & Co.

IN the preface of this work the author says:—"In the following pages I have tried to render the science of Acoustics interesting to all intelligent persons, including those who do not possess any special scientific culture." He has succeeded admirably. By treating the subject experimentally, throughout, it is relieved of anything like dryness, and is, indeed, rendered really fascinating. Every lecture is rendered perfectly lucid, and is supplemented by a summary that tersely grasps its distinctive points. We heartily commend the book to all who have a taste for philosophy. Sold by ADAMS & ELLIS.

THE SEXTON'S TALE, AND OTHER POEMS. By THEODORE TILTON. New York: Sheldon & Co.

THERE are thirty-five poems in this little volume of 173 pages. That from which it takes its name can hardly be considered the best, but is, with one exception, the longest. Some of them have attained wide publicity through the newspapers, and are well worth preserving in a more permanent form. In them all there is shown much facility of versification and delicacy of rhythm, with here and there a touch of fancy which tells of genuine poetic inspiration. They are presented in fitting garb. Typographically considered the book is a perfect gem. Heavy tinted paper—beautiful type—elegant binding, English gilt,—these do credit to the publishers. For sale by ADAMS & ELLIS.

TEN MONTHS IN BRAZIL. With Incidents of Voyages and Travels, Descriptions of Scenery and Character, Notices of Commerce and Productions, etc. By JOHN CODMAN. Boston: Lee & Shepard.

IN this neatly printed and attractively bound volume of 208 pages a steamboat captain, whose vessel was sometime employed in traffic along the coast of Brazil, gives us piquant sketches of Brazilian customs and manners, and gossips happily of many entertaining things concerning a country which, though a part of our own continent, is less known to us than nearly all of Europe. The writer is a good observer—somewhat prejudiced in some respects, we fancy—and is shrewd enough to turn all he sees to good account. Sold by DEWEY.

MODERN PALMISTRY; Or, The Book of the Hand. Chiefly according to the Systems of D'ARPENTIGNY and DESBAROLLES. With some account of the Gipsies. By A. R. CRAIG, M. A., Author of "The Philosophy of Training," etc. New York: American News Company.

HERE we have 220 twelve mo. pages for the curious. The science of Palmistry—if it be a science and not merely a speculative theory—is of very ancient origin. It had a place among the Egyptians four thousand years ago, and since then has been in vogue among various wandering tribes—believed in by them doubtless, and winning some converts from among more civilized people. The lines of the hand may tell unerringly of the possessor's fortune, but we confess to a lack of faith in their indices. Sold by DEWEY.

THE GHOST. By WM. D. O'CONNOR. With two illustrations by THOS. NAST. New York: G. P. Putnam & Son.

A VERY charming little Christmas Story is this, so handsomely printed and bound. It is fancifully wrought out, but it teaches a beautiful lesson. "In the name of the SAVIOUR, I charge you, be true and tender to mankind," is the theme it enforces; and we wish the words might touch the hearts of all grasping, niggardly men of wealth as they did that of Dr. RENTON, to whom the Ghost came with such happy effect. For sale by DEWEY.

THE YOUNG MAROONERS, ON THE FLORIDA COAST; Or, ROBERT AND HAROLD. By F. R. GOULDING. New and Enlarged Edition. [12 mo.—pp. 446.] Philadelphia: James S. Claxton.

AN attractive book for youth, which several years ago had a large sale in this country, and which has since passed through many editions in England, is here seen in a new and beautiful dress. It is a story which parents can safely place in the hands of their children, its aim being to impart useful information in an interesting manner. Sold by E. DARROW & KEMPSHALL.

Useful, Scientific, &c.

FABER'S LEAD PENCILS.

FROM a letter written from Nuremburg, in the Kingdom of Bavaria, to the Utica Herald, we take the following interesting account of Faber's lead pencils, which are believed to be superior to those of any other maker:

Every school boy in America has seen lead pencils bearing the name of A. W. Faber, but all do not know where they are made, the amount of labor bestowed on them, or the difficulty of manufacturing a really good article. I visited yesterday, in the village of Stein, three miles from here, this famous manufactory, and perhaps a few historical notes in relation to it may not be uninteresting to your readers.

In the year 1760, Kasper Faber settled in this little village, and commenced the manufacture of lead pencils. During his life the quantity made was not so great but the products of the week's work could be taken, on Saturday, in a basket to Nuremburg and Furth for sale. His son, Anton Wilhelm, whose name the pencil now bears, did not increase the business, and his grandson had little better success. On the death of the latter, in 1839, his son, the present proprietor, then twenty years of age, succeeded to the business. This young man had then been spending three years in Paris, working at his trade, and devoting himself to improving the method of making pencils. Conceiving that he had made an important discovery, he returned home, and with the greatest difficulty, by mortgaging all the estate that had fallen to him, succeeded in borrowing eighty dollars, with which to commence business. He expended this small sum in making pencils according to his new method, which consisted in part in giving them different degrees of hardness, a thing before unknown, which he distinguished as at present, by numbers. He took these to Munich and other cities, where they were tried by the best artists, who were so pleased that they gave him very flattering certificates; but on returning home he found the proceeds of his eighty dollars expended, and he had no other resource than the banker who had already befriended him. The banker, on learning that he had not brought the money to pay the obligation, denounced him as a swindler and sent him away. The young man, however, afterward succeeded, by means of his certificates, in regaining his confidence, and received from him another small sum.

From that time he continued to enlarge his works and extend his business, until now over five hundred persons are employed, not including a large amount of labor outside of the factory, making weekly over 225,000 pencils. He has taken his two brothers into the business, one of whom has the management of a house in New York, to which the leads, ready for setting, are taken from here. He is now considered as a millionaire, and has been made Baron by the King of Bavaria, and given a seat in the councils of the Kingdom. Such instances of success are not very uncommon in America, but they are so rare here as to be regarded as a sufficient ground for a grant of nobility. The cedar for the wood of the pencils is brought from Florida, no other having yet been found suitable. The graphite is mixed with clay, and after being ground and moulded into the shape in which it is used, is subjected for several hours to a very great heat. The darker and lighter shades, and the different degrees of hardness, depend upon the amount of clay and the degree of heat to which it is subjected. Only the granular graphite found at Borrowdale, Cumberland, England, is suitable for first-class pencils. Ninety-two sets of stone, about the size of common mill-stones, are required to be kept constantly in motion to grind the lead for Faber's works.

There are many manufactories of pencils in and near this city, employing in all from 5,000 to 8,000 persons, and making over 220,000,000 annually.

A FLEXIBLE STONE.

A GREAT geological curiosity has been deposited in the museum of the Hartley Institution at Southampton, England, consisting of a piece of flexible stone about two feet long, seven inches wide, and more than one inch in thickness, having the appearance of a rough sandstone, which bends with a slight pressure like a piece of India rubber or gutta percha of the same size. This interesting specimen of geology has been placed in a glass case constructed for it, fitted with a lever, by touching the key of which on the outside of the case the flexibility of the stone is shown. It was presented to the Hartley Institute by Mr. Edward Cushen from his relative, Mr. R. S. Munden, who obtained it from Delhi, India. In its natural position the stone is said to run in thin layers in the soil in which it is found, but is so rare in India that it finds a place in the museums of Calcutta. There is a similar stone, but not so wide as the one under notice, in the British Museum, and another in the museum of the School of Mines, but specimens are very rarely to be met with. Although the stone has a gritty appearance, no grit or dust is thrown off by the motion given to it when under pressure.

A RAILWAY NOVELTY.

A RUSSIAN engineer exhibits, at the Paris Exposition, a railway invention which has attracted considerable curiosity. The object is to save the power gained on a descent, now lost in the friction of the brakes, with wear and tear, and use it in an ascent. To do this, the engineer has attached to the locomotive two very heavy fly wheels. Going down hill they act as a break, and the force they gather will carry a train up an equal rise, less the friction. Here a model train loaded with water runs down a sharp incline, the water runs off, and the force of the fly wheel carries the train back to the place of starting. In this way a short line, taking coal down an incline—from the pit's mouth, for example—could be worked without any power but that gained by each descent of the train.

THE LATE EX-GOVERNOR ANDREW, OF MASSACHUSETTS.

EX-GOVERNOR JOHN A. ANDREW, of Massachusetts, (who died of apoplexy at Boston on the 30th ultimo,) was born at Windham, Maine, May 31, 1818, and graduated at Bowdoin College in 1837. He immediately entered upon the study of the law in Boston, where, in 1840, he was admitted to the bar. Until the outbreak of the war he practiced his profession in that city, attaining special distinction in the Fugitive Slave cases of SHADRACH, BURNS and SIMS, which arose in that city under the Fugitive Slave Law of 1850. He was elected a member of the State Legislature from Boston in 1858. In 1860 he was elected the twenty-first Governor of Massachusetts since the adoption of the Constitution of 1780, by the largest popular vote ever cast for any candidate. He was specially energetic in placing the militia of Massachusetts on a war footing, in anticipation of the impending conflict between the government and the seceded States; and, after the war had actually begun, was equally active in raising Massachusetts' contingent of volunteers on the various calls for troops. He was twice reëlected Governor, and during the three terms was one of the most urgent in impressing upon the Administration at Washington the necessity of adopting the emancipation policy, and of accepting the services of colored troops. The meeting of Governors at Altoona, mainly at Gov. ANDREW'S instance, had these objects in view, and was the forerunner of the Proclamation of Emancipation. His third reëlection, in November, 1862, over Gen. DEVENS, the Conservative candidate, was by 25,000 majority. On the expiration of this term he declined renomination, to attend to his private business, as he was unable to sustain the pecuniary sacrifice involved in holding the office. Soon after he was tendered and declined the Presidency of Antioch College, Ohio. The distinguished ability which shone out in his administration as Governor of Massachusetts, the many sterling qualities which were summed up in his character, his social address, and the charm of his conversational powers, which were brilliant, together with his clear and forcible style as an orator, will ever remain impressed on the memories of all who knew him.

We get a better inside view of the character of Gov. ANDREW from what the lawyers say of him, than from the public discourses and eulogies. Mr. T. P. CHANDLER, at a meeting of the Suffolk Bar, said he was fond of conquering in a cause; he was full to overrunning with fun and drollery; he was a mimic; he loved profoundly the New England character, and thoroughly understood it; he had no selfish ambition, but did with all his might what fell to him to do; he loved children; he was fond of ballad music and psalmody; he was given to racy anecdote; his rise at the bar was slow, and he had but just begun to take the front rank in the profession; he was faithful to his clients, and especially tender of their rights; and he had a marvellous power of work in him. He was a remarkable man, scarcely yet in the prime of his powers.

Various Topics.

THE SANCY DIAMOND.

THE great Sancy Diamond, which stands ninth in the glittering and very restricted aristocracy of the world's big diamonds, is to be sold, and while it is on show at one of the first jeweler's, the story of its life and troubles travels round Paris. And, indeed, since it was found on the battle field in the sword hilt fallen from Charles le Temeraric's dying hand, its vicissitudes have been great, and far too numerous to recount in full. At one time Henry IV borrowed it from De Sancy, to give it as a guarantee to the Swiss for the troops they had lent him; and the messenger to whom De Sancy had confided it, disappeared before he reached the King. A long and anxious time elapsed before any one learned what had become of the faithful servant, but it was at last discovered that he had been attacked and assassinated. The body was found, exhumed, opened, and in the stomach lay poor Sancy! The messenger had swallowed it to preserve it from the hands of the assassins. The precious stone went on leaping from impossibility to impossibility, until it reaches the scene of its last trouble, which is laid in Lyons, about twenty years ago. Monsieur le Comte Demidoff and his wife were visiting Lyons with the amiable writer, Jules Janin. The day was hot and the Comtesse threw off her shawl, and taking out the pin, in which was mounted the celebrated diamond, asked Jules Janin to put the jewel in his pocket. They passed the day in looking at the sights in the town, and in the evening went to the theater. "*Apropos, mon ami,*" said the Count, between the acts, "did you give the pin to the Comtesse?" Poor Jules Janin bounded on his feet, plunged his hands convulsively into his waistcoat pockets, and then, without uttering a word, rushed from the box. During the headlong course back to the hotel all the incidents of the day, all the horrors of his situation, pressed on his brain like a nightmare. He remembered that after their walk he had changed his dress; that he had left the door of his room open, because the *garcon* was coming to arrange it; that the waistcoat containing the diamond had been thrown upon a chair; that the *blanchisseuse* was due that day; and that the waistcoat was to be washed. A complication of horrors! His fears were groundless; he found his door open; he had procured no light in his haste, but rushed into the darkness toward the fatal chair, when he perceived that the room was full of bright rays, and, flashing and glittering on the floor, lay the Sancy. The *garcon* had arranged the room, the *blanchisseuse* had come, the waistcoat had been taken to be washed, but the diamond had slipped out and was saved, and so was Jules Janin. But he still remembers with horror the episode of the Sancy diamond.—*Home Journal.*

LOST TIME.

LET any man pass an evening in vacant idleness, or even in reading some silly tale, and compare the state of his mind when he goes to sleep or gets up next morning, with its state some other day, when he has spent a few hours in going through the proofs, by facts and reasoning, of some of the great doctrines in natural science, learning truths wholly new to him, and satisfying himself, by careful examination, of the grounds on which known truths rest, so as to be not only acquainted with the doctrines of themselves, but also to be able to show why he believes them, and to prove before others that they are true; he will find as great a difference as can exist in the same being—the difference between looking back upon time unprofitably wasted, and time spent in self-improvement; he will feel himself, in one case, listless and dissatisfied—in the other comfortable and happy; in one case, if he did appear to himself humble, at least will not have earned any claim to his own respect; in the other case, he will enjoy a proud consciousness of having, by his own exertions, become a wiser and therefore a more exalted nature.

REGULATED affections are as necessary as regulated morals, and when a mind has been spent and frittered for years on a number of objects, there must come a period when it will not respond to any feeling, and will remain inert and colorless, without aim or hope, having satiated itself on the most unwholesome diet which the world could prepare for it.

Reading for the Young.

THE NAUGHTY KITTEN.

BY PAULINA.

Oh, you thief with pretty face!
Is it not a pity
You should get into disgrace,
Naughty little kitty?

I had thought it would be nice—
So did Ben and Mary;
You should hunt and kill the mice
Down in mamma's dairy.

But she knew you better far,
Said, "You cannot risk her,"
Now, you look the thief you are—
Cream on ev'ry whisker.

Written for Moore's Rural New-Yorker.

THOUGHTS FOR BOYS.

PARENTS do wrong in keeping their children hanging around home, sheltered and enervated by parental indulgence. The eagle does better. It stirs up its nest when the young eaglets are able to fly. They are compelled to shift for themselves, for the old eagle literally turns them out, and at the same time tears all the down and feathers from the nest. 'Tis this rude and rough experience that makes the king of birds so fearless in his flight, and so expert in the pursuit of prey. It is a misfortune to be born with a silver spoon in your mouth, for you have it to carry and plague you all your days. Riches often hang like a dead weight, yea like a millstone about the necks of ambitious young men.

Had BENJAMIN FRANKLIN or GEORGE LAW been brought up in the lap of affluence and ease, they would probably never have been heard of by the world at large. It was the making of the one that he ran away, and of the other that he was turned out doors. Early thrown upon their own resources, they acquired the energy and skill to overcome resistance, and to grapple with the difficulties that beset their pathway. And here I think they learned the most important lesson of their lives—a lesson that developed their manhood—forcing upon them Necessity, the most useful and inexorable of masters. There is nothing like being bound out, turned out, or even kicked out, to compel a man to do for himself. Rough handling of the last sort has often made drunken men sober. Poor boys, though at the foot of the hill, should remember that every step they take towards the goal of wealth and honor gives them increased energy and power. They have a *purchase*, and obtain a *momentum*, the rich man's son never knows. The poor man's son has *the furthest to go*, but without knowing it he is turning the *longest lever*, and that with the utmost *vim* and *vigor*.

Boys, do not sigh for the capital or indulgence of the rich, but *use* the *capital* you have—I mean those GOD-given powers which every healthy youth of good habits has in and of himself. All a man wants in this life is a skillful hand, a well informed mind, and a good heart. In our happy land, and in these favored times of Libraries, Lyceums, Liberty, Religion and Education, the humblest and poorest can aim at the greatest usefulness, and the highest excellence, with a prospect of success that calls forth all the endurance, perseverance and industry that is in man.

H. K. F.

North Chili, N. Y., 1867.

HOME AMUSEMENTS.

WE here give illustrations of two simple but quite amusing performances, one of which might almost induce the young folks to believe in magic did we not fully explain the manner in which it is done. "The Erratic Egg" is a very common egg indeed, probably one that "Old Speckle" laid, but it can be made to do rather an uncommon thing.

The Erratic Egg.

You see the two wine-glasses, and the egg in one? Well, the feat is to transfer the egg from one wine-glass to the other, and back again, without touching it or the glasses, or allowing any person or anything to touch them. Perhaps you think it cannot be done, but just blow smartly on one side of the egg, and see if it does not hop right over into the next glass; then blow on the other side if you want it to hop back.

THE OLD MAN'S FACE.

There isn't any trick about "The Old Man's Face." All that is required for producing it is a person's hand, a handkerchief and a little India-ink. The engraving shows how simple the arrangement is, and it only needs a little practice to get up a capital face.

"PAPA," said a bright-eyed little girl one day, "I believe mamma loves you better'n she does me." Papa held doubts on that subject, but concluded that it was not best to deny the soft impeachment. She meditated thoughtfully about it for some time, evidently considering her father's silence as unfavorable to her side. "Well," she said at last, "I spose it's all right; you're the biggest and *it takes more* to love you."

The chameleon, who is said to feed upon nothing but air, has of all animals the nimblest tongue

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

A NEW QUARTER of the RURAL commenced Oct. 5, and Volume XIX will begin January 4, 1868. Now, therefore, is a good time to subscribe and form Clubs as subscriptions can begin with October or January or any time between. The 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, will be sent on trial, or as specimens, for ONLY FIFTY CENTS.

GOOD PAY FOR DOING GOOD

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., NOVEMBER 23, 1867.

NEWS OF THE WEEK.

New York State Items.

THE Constitutional Convention re-assembled on Tuesday, the 12th inst. Resolutions in honor of the late Hon. D. L. Seymour, Delegate at Large, were adopted, and an adjournment until the succeeding day voted in respect for the memory of the deceased.

On the 14th inst., the Convention discussed and adopted two Sections relative to the Canals, one of which provides that the Comptroller and Attorney-General shall be the Commissioners of the Canal fund, the other providing that the Governor shall appoint an Auditor of the Canal debt.

The Utica, Chenango & Susquehanna Valley Railroad was opened to Waterville on the 14th inst., by an excursion train of nearly three thousand people and a banquet at Waterville, at which numerous speeches were made.

The Hon. Wm. A. Darling has been nominated for Mayor of New York city by the Republicans, while Fernando Wood is a candidate for the same office supported by the Mozart branch of Democracy, and John T. Hoffman the Tammany candidate.

The Cole-Hiscock murder case was up before Judge Peckham, at Albany, on the 11th inst. Messrs. James T. Brady, Amasa J. Parker and Wm. J. Hadley appeared for Gen. Cole, and District Attorney Henry Smith and Lyman Tremain for the People. United States Senator Cole accompanied his brother from the jail to the court room. When asked what he had to say to the indictment, Gen. Cole pleaded not guilty. Mr. Hadley moved a postponment until the next Oyer and Terminer, and in support of the motion submitted an affidavit in regard to the absence of several material witnesses and the illness of two very important ones.

A destructive fire occurred in Syracuse on the morning of the 15th inst. It broke out in the looking-glass establishment of Edwin Beeny, Genesee street, which was destroyed, as were also Borton's tobacco store, a large building and several others of inferior consequence. Estimated loss, $80,000; insured, $27,000.

From Washington.

IT is understood the impeachment investigation will be resumed in a few days. General Grant and Col. Hillyear will be re-called.

Orders have been issued from the War Department for the establishment and organization of an artillery school at Fortress Monroe, and also making the school and post an independent command.

The Postmaster General has transmitted to the President for his approval two postal treaties recently concluded between the United States and Switzerland and the North German Union, including Prussia.

It is reported on good authority that Secretary McCulloch recently tendered his resignation, and the President requested him to withdraw it. The Secretary complied.

Secretary Welles is still seriously ill; and his friends are to-day much alarmed as to the issue of his sickness.

U. S. Attorney-General Stanberry states that the opinion imputed to him concerning the legality of the meeting of Congress, as fixed by the last session, is a forgery.

An order has been promulgated from the War Office, honorably mustering out Major-General Daniel E. Sickles and Brigadier-General R. Scott from the military service of the United States, to take effect January 1st, 1868. The first named will still hold rank as Colonel in the regular army. Scott was a volunteer officer attached to the Freedmen's Bureau.

It is understood to be the decision of the Treasury Department that unless the holder of 7.30s shall present them for conversion into 5.20 bonds at maturity, the option to make such conversion is lost, and the 7.30s will afterwards be paid in greenbacks.

About fifteen Senators and thirty Representatives have arrived in Washington, some of them from the extreme borders of the Pacific States.

The Judiciary Committee have postponed the Maryland business, and taken up the impeachment question.

From the West.

THE annual meeting of the Society of officers of the Army of the Tennessee was held at Mercantile Library Hall, St. Louis, on the evening of the 13th inst. The address of welcome to the members of the Society was delivered by Surgeon E. C. Franklin. The regular annual address was delivered by Gen. Sherman.

A subscription for the benefit of Garibaldi was opened in San Francisco a few days since, and $2,000 were collected.

The formal transfer and delivery of Russian America to the United States Government took place on the 13th inst., Captain Pestrehoff, Acting Commissioner, on behalf of the Russian Government, and Major-General Rousseau on behalf of the United States.

Representative Ashley, of Ohio, has prepared and will introdnce in Congress on the first day of the session, a bill designed to prevent the Ohio Legislature from re-districting the State. It provides that a State shall only be re-districted every ten years after the taking of the census.

The Indians in Eastern Oregon are committing depredations on settlers, and troops have been sent there. The Indians in Idaho are also giving much trouble.

From the South.

As E. A. Pollard, the historian of Lee and his Lieutenants, was passing in front of the Maltby House, a few days since, he was approached by a son and nephew of Henry A. Wise, named John and Douglas Wise, each of whom fired a shot at Pollard, one of the shots passing through his right arm, he having his wife on his left arm at the time. Pollard at once drew his pistol, but was unable to raise it to give a return fire on account of the wound he had received; and the ball from his weapon struck the pavement.

The Democrats have made in Maryland the cleanest sweep ever known in our politics. They have carried every officer in the whole State, from Governor to Constable. The Legislature in both branches is unanimously Democratic.

Prof. Harkness of the National Observatory, on special duty at Richmond, reports that the meteors fell at the rate of 1,500 an hour on the morning of the 14th inst.

Chief Justice Chase arrived in Richmond on the 13th inst., and presided in Court. Mr. Davis is expected there on the 23d inst.

The cost of registration in Virginia was $239,000. The cost of the military establishment in the State for the last ten months was $5,000,000.

Latest European News.

LATE dispatches received from Italy state that the feeling against the French on the part of the Italians has reached a perfect furore. The authorities have taken precautions to prevent another outbreak, which was imminent; and more French troops have been dispatched from Toulon for Civita Vecchia. King Victor Emanuel and the Prime Minister Menabrea are very unpopular with the people. Baron Ratazzi, the former Prime Minister, has openly joined the radical party. King Victor Emanuel has called out the reserves of the Italian army and ordered the formation of three large camps. General Garibaldi is still closely confined. The Florence Italia however, scouts the fear of a coup d'etat by the insurgents. The same authority asserts that the national Diet will meet in a few days.

The trial of Garibaldi has been postponed, it being considered doubtful whether any of the courts have jurisdiction in his case.

The standard semi-official journals of this city say the sons of Garibaldi have not been captured, but are still at large, though concealed.

England, France and Austria have come to a common understanding as to the policy to be pursued by them hereafter in the Eastern question.

It is stated that a terrible explosion recently took place in one of the mines of the Ferndale Colliery, in that county. All the miners 300 in number, were at work at the time. At the last accounts the mine was on fire, and it was feared that but few lives would be saved.

Telegrams have been received at London stating that a second typhoon had occurred at Macao, in China. The damage to property was immense; beyond this no details have been received.

THE METEORIC SHOWER.—The shower of meteors that was advertised to come off a year ago, and failed to appear, was only twelve months behind time. It was seen in nearly all parts of the country on the morning of the 14th inst., and is pronounced the most brilliant seen in America since 1833. At the Naval Observatory, Washington, one thousand meteors were counted in the twenty-one minutes between 4:14 o'clock and 4:35 o'clock. It is probable that one-half were not seen; so that it may be estimated that 2,000 really fell in the course of twenty-one minutes.

Prof. Watson, of the Michigan University, reports that according to his observation the meteors fell at the rate of fifteen hundred per hour, about 4 A. M. Many unusually brilliant ones were observed at Vassar College, Poughkeepsie. The night was not altogether favorable for observation, there being a full moon and some clouds.

FROM MEXICO.—All the members of the Court Martial which tried Santa Anna, with the exception of the prosecutor, have been sentenced to six months' imprisonment for the mildness of their verdict, and have already been incarcerated in the fortress of San Juan d'Ulloa. On the 30th ult., President Juarez commuted the sentences of the Imperial Generals and Colonels, both native and foreign, to four years' imprisonment, field and staff officers to three years, and line officers to two years. Foreign adherents of the Empire, including soldiers who served in the Imperial forces, are ordered to leave the Republic. The higher civil officers of the Empire are sentenced to banishment, and the lesser officers to imprisonment or surveillance of the police.

IOWA has now 1,145 miles of railroad complete and in running order, which have cost in construction $45,480,000. When the roads now under contract are completed, Iowa will rank seventh as a railroad State.

FROM THE WEST INDIES.—The news from Porto Rico is of the most disastrous character. The late gale there was awfully destructive of life and property. All the towns have been more or less desolated by wind and water. One thousand shops have been laid in ruins, and three hundred have been seriously damaged. In some instances the houses along entire streets have been demolished, and the roadway entirely hidden by the ruins. No news whatever has been received regarding the effects of the storm in the central portion of the island, where, in the savannas, numerous herds are pastured; but elsewhere the cattle have been killed and the fields swept entirely bare. The loss is incalculable. The merchants on the island have demanded that flour, corn, provisions, &c., shall be entered duty free. During the late terrible gale the little island of Tortola, of the Virgin group, entirely disappeared, being completely submerged, it is said, for eight hours. Everything living, man or animal, upon it, perished.

FROM CANADA.—On the night of the 15th inst., Mr. McGee made a long rambling speech, in which he advised the Government not to let the period for the suspension of the habeas corpus act expire, for he believed that as soon as an opportunity occurred there would again be an attempt made to do in Canadian cities what the Fenians are endeavoring to do in Great Britain. The Government will, during the present session, submit to Parliament a plan for the establisment of a Government Savings Bank. The Provincial notes in circulation on the 6th of November amounted to $3,918,242; specie held in reserve, $800,000. Discount on American invoices for the ensuing week, 28 per cent.

DEATH OF GEN. GOULD.—It becomes our painful duty to chronicle the sudden death of Gen. JACOB GOULD, long an esteemed and prominent resident of this city, which sad event occurred on Monday morning last. Gen. G. held many positions of trust and honor during the last forty years of his life, and his death will be widely mourned. He died of apoplexy, and was nearly 74 years of age.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, NOV. 19, 1867.

OUR local money market continues about as heretofore. The banks are generally able to meet the wants of their regular customers. There is not much change in financial matters at the East, though it is reported that discounts are more easily obtained than for two or three weeks past.

Gold continues rather weak. Sales were made in New York yesterday at 129¾.

The general depression in business continues. Business men, in almost every department of trade, feel uncertain in regard to the future, and are very cautious about extending their operations. Very few new enterprizes are commenced. Should financial men seem to anticipate extreme moneyed embarrassment in the immediate future. The same fears were entertained a year since; everybody was cautious, and business operations were contracted in consequence. The caution practiced doubtless had much effect in warding off what was so much feared. Similar apprehensions now, if they should result in checking undue speculation, and in the contraction of heavy indebtedness, may prevent—at any rate, greatly alleviate—the moneyed difficulties apprehended in the future. The course the Secretary of the Treasury shall pursue, and the action of Congress, will have an important bearing upon the financial condition of the country. The Secretary's report is looked for with much interest.

There has been a great yielding of prices in the last year. Breadstuffs, it is true, have not come down in the last twelve months. This is owing to the depletion of stocks before the last harvest, and to the deficiency of the European harvest. Besides, the American grain crops were at first reported in excess of the reality, and the over-estimate, when ascertained, induced dealers to think the crop was short.

Manufactures have largely declined, and there is a corresponding decline in the raw material. Wool has declined fully 15 cts per pound; cotton, 12 cts.; leather, 9 cts.; iron, $14 per ton. The wholesale price of standard sheetings in New York a year since was 33 cts per yard—now 14¾ cts. Prime madder prints were sold by New York jobbers a year since at 25 cts. per yard—now the published quotations are 12½ cts. per yard. The decline in prices is dangerous to dealers, but wholesome in its general results, and shows that we are returning to the normal condition of things. Prices would find their proper level much sooner, were it not that speculators manipulate the gold market so as to keep it at an unreasonably high premium. Ere long they must relax their grasp and gold will go down. Let it go. We hope soon to witness a return to specie payments.

The wool market is dull and prices are low, though for the last week there has been a little better inquiry for fine lots. Holders for a few weeks have seemed to lose confidence in the future of the market, and have been anxious to realize. Eastern stocks are considerably reduced, which now gives a little better hope for the future. At least, a further decline is not anticipated. The sales in Boston last week foot up 860,000 lbs., at a range of 32½@64c. for fleece.

WHEAT AND FLOUR.—Prices continue high, but somewhat irregular in the eastern market. In our local market prices are about the same as last week.

Rochester Wholesale Prices Current.

☞ You will know what your Prize is before you pay for it. Any Prize may be exchanged for another of the same value. ☞ NO BLANKS!

Opinions of the Press.

The New York Gift Company are distributing many valuable prizes. We have examined their manner of doing business and know them to be a FAIR DEALING firm. Their plan is more satisfactory than "Presentation Festivals," as they DRAW every day and the subscriber need not pay for the prize drawn, unless suited. —*Gazette, N. Y., Oct. 24th.*

The Gift Enterprise business as usually conducted for the *pretended* benefit of some charitable purpose, compelling purchasers of tickets to wait months for the distribution, at a "Musical Festival" several times postponed, has impaired public confidence in such affairs. The only fair system of distribution is the old and popular one of SEALED TICKETS, stating the prize, which will be delivered immediately, on payment of one dollar. That is the plan of H. BARTON & CO., at 599 Broadway, the most attractive place of the kind now in operation. They are doing the largest business, and deserve their success. You cannot draw a $100,100 farm, there, but have a reasonable *chance* for a good prize, as we know many that have been drawn, and the firm is reliable.—*Morning Advertiser, Oct. 25th, 1867.*

☞ Satisfaction guaranteed. Liberal inducements to Agents.

☞ Six Tickets or One Dollar. 13 for $2; 33 for $5. All letters should be addressed to

H. BARTON & CO., 599 Broadway, New York.

THE WESTERN RURAL is an ILLUSTRATED DOUBLE QUARTO AGRICULTURAL, HORTICULTURAL and FAMILY WEEKLY, now in its FIFTH VOLUME, and *has already reached the largest circulation of any Agricultural Journal west of New York!* Published at Chicago and Detroit—distinct editions. Agents say it is the best paper to canvass for they ever tried.

TERMS.—$2,50 per Year; $2,00 in Clubs of Four and more.

For Specimen Copies, Premium List, Posters, etc., address **H. N. F. LEWIS,** Publisher Western Rural, 84 and 86 Dearborn Street, Chicago, Ill.

, New subscribers for 1868 receive the remaining numbers for 1867 FREE, from the time names are received.

THE REMAINDER OF THE YEAR FOR NOTHING!!

The Country Gentleman.

All NEW *Subscribers to the* CULTIVATOR & COUNTRY GENTLEMAN *for* 1868, *paying in advance, previous to the close of* 1867, WILL RECEIVE THAT PAPER WEEKLY *from receipt of remittance to December* 31*st*, WITHOUT CHARGE.

THE CULTIVATOR & COUNTRY GENTLEMAN, is published in large weekly Numbers of 16 to 20 pages each, and designed to include EVERY DEPARTMENT of Agriculture, Stock-Raising, Horticulture and Domestic Economy.

The Publishers prefer using the following extracts from well-informed sources, rather than to speak for themselves:

The Maine Farmer speaks of THE COUNTRY GENTLEMAN as "STANDING AT THE HEAD OF THE AGRICULTURAL PRESS OF THE COUNTRY."

The Scottish Farmer calls THE COUNTRY GENTLEMAN "THE BEST OF ALL THE AMERICAN NEWSPAPERS devoted to matters of Rural Economy."

The Gardeners' Monthly says that THE COUNTRY GENTLEMAN is "Conducted with a Degree of Talent equal to any European Journals, and superior to most of them."

The Canada *Farmers' Advocate* says:—"We are in receipt of Agricultural publications from various parts of the world, but for truthful accounts, well written practical articles, and general management of the paper, we have seen NONE AT ALL TO COMPARE with THE CULTIVATOR & COUNTRY GENTLEMAN, published in the United States."

TERMS.—The Terms are lower than those of *any other paper* of similar standing:—One copy, **$2.50** per year; Four copies, **$9;** Eight copies, **$16.**

SPECIMEN COPIES FREE OF CHARGE.

☞ Prospectuses, Showbills, &c., now ready, applications for which are invited. Address

LUTHER TUCKER & SON, *Publishers,* ALBANY, N. Y.

WHITE MEN MUST RULE AMERICA!

CLUBS FOR 1868---CLUBS FOR 1868.

THE BEST NEW YORK WEEKLY PUBLISHED.

NEW YORK DAY-BOOK FOR 1868.

THE NEW YORK DAY-BOOK is a straightforward, Radical Democratic paper, with a larger circulation than any other Democratic Journal ever published on this Continent, and it enters on the threshold of 1868 more prosperous and more hopeful of the great cause it upholds than ever before. Standing on the foundation of the Declaration of Independence, that "all (*white*) men are created equal," and *therefore* entitled to equal rights, it is opposed to all forms and degrees of special legislation that conflict with this grand central TRUTH of Democrary, and over all, and above all, does it combat that monstrous treason to American liberty, which, thrusting the negro element into our political system, MUST OF NECESSITY wreck the whole mighty fabric left us by our fathers. God has created white men superior and negroes inferior, and *therefore* all the efforts of the past six years to ABOLISH this work and equalize with negroes—every law violated, every State Constitution overthrown, every life sacrificed, and every dollar expended, are NECESSARILY just so many steps towards national suicide; and the simple and awful problem now upon us is just this—shall we recover our reason and retrace our steps, or march on to Mongrelism, social anarchy, and the total ruin of our country.

THE DAY-BOOK, *therefore,* demands the restoration of the "Union as it was"—A UNION OF CO-EQUAL STATES UPON THE WHITE BASIS, as the only hope, and the only means possible under heaven for saving the grand ideas of 1776, and the fundamental principles of American liberty, and if the real friends of freedom, and the earnest believers in that sacred and glorious cause in which the men of the Revolution offered up their lives, will now labor to expose the ignorance, delusion and treason of the Mongrel party, IT WILL SUCCEED, and the white Republic of Washington be restored again in all its original beneficence and grandeur.

THE DAY BOOK will, however, hereafter be more than ever devoted to all the varied purposes of a *news* paper. Conscious that it reaches thousands of families who take no other journal, beyond perhaps their local paper, it will continue and improve its "NEWS OF THE WEEK" Summary, so as to present a transcript of the World's events in each issue. Its "FAMILY DEPARTMENT" will embrace the best original and selected stories. Its "AGRICULTURAL DEPARTMENT" will be fully sustained, and being the only paper of its class made up EXPRESSLY for Country circulation, it is confident that it is worth double the price of a weekly hurriedly reprinted from a daily. It gives full and complete Reports of the New York and Albany Cattle Markets; Grain Provision and Cotton Markets, and a Weekly Review of Financial Matters, together with the Markets, by Telegraph, from New Orleans, Chicago, Charleston, Philadelphia, &c., &c., up to time of going to press.

Terms—Cash in Advance:

Address JAMES VICK, Rochester, N. Y.

ESTABLISHED 1861.

THE

GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors,

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to "*collect on delivery*."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ₱ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ₱ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ₱ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ₱ lb.
Gunpowder (Green,) $1.25, best $1.50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

CLUB ORDER.

Edwards, St. Lawrence Co., N. Y., June 3, 1867.

THE GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street, New York.

DEAR SIRS:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. Asking as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige

Your ob't servant, DAVID C. McKEE.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* **Licenses Granted.**

PLASTIC SLATE FOR

ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope. Non-combustable, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

Put up in cans of 1 pound, 2 pounds, 3 pounds, 6 pounds and 12 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No time is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 893-39t

H. P. WESTCOTT'S ADJUSTABLE

DASH CHURN.

First Pat'd Aug., 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING Co is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G Co., at Farma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

AGENTS WANTED—$10 TO $20 A DAY, to introduce our new patent STAR SHUTTLE SEWING MACHINE. Price, $20. It uses two threads, and makes the genuine Lock Stitch. All other low priced machines make the CHAIN STITCH. Exclusive territory given. Send for circulars. W. G. WILSON & CO., Manufacturers, Cleveland, Ohio. 922-13t

ARE THE CHILDREN AT HOME.

Each day when the glow of sunset
Fades in the western sky,
And the wee ones, tired of playing,
Go tripping lightly by,
I steal away from my husband,
Asleep in his easy chair,
And watch from the open doorway
Their faces fresh and fair.

Alone in the dear old homestead
That once was full of life,
Ringing with girlish laughter,
Echoing boyish strife,
We two are waiting together;
And oft, as the shadows come,
With tremulous voice he calls me,
"It is night! are the children home?"

"Yes, love!" I answer him gently,
"They're all home long ago;"
And I sing, in my quavering treble,
A song so soft and low,
Till the old man drops to slumber,
With his head upon his hand,
And I tell to myself the number
Home in the better land,

Home, where never a sorrow
Shall dim their eyes with tears!
Where the smile of God is on them
Through all the summer years!
I know!—yet my arms are empty,
That fondly folded seven,
And the mother-heart within me
Is almost starved for heaven.

Sometimes, in the dusk of evening,
I only shut my eyes,
And the children are all about me,
A vision from the skies;
The babes whose dimpled fingers
Lost the way to my breast,
And the beautiful ones, the angels,
Passed to the world of the blessed.

With never a cloud upon them,
I see their radiant brows;
My boys that I gave to freedom,—
The red sword sealed their vows!
In a tangled Southern forest,
Twin brothers, bold and brave,
They fell; and the flag they died for,
Thank God! floats over their grave.

A breath, and the vision is lifted
Away on wings of light,
And again we two are together,
All alone in the night.
They tell me his mind is failing,
But I smile at idle fears;
He is only back with the children,
In the dear and peaceful years.

And still as the summer sunset
Fades away in the west,
And the wee ones tired of playing,
Go trooping home to rest,
My husband calls from his corner,
"Say, love! have the children come?"
And I answer, with eyes uplifted,
"Yes, dear! they are all at home!"

The Story Teller.

Written for Moore's Rural New-Yorker.

THE MYRTLE LEAF.

A THANKSGIVING STORY.

BY A. A. HOPKINS.

CHAPTER I.

When Clyde Hammond enlisted in the —th Regiment of New Hampshire Volunteers, and said good-bye to the old home which nestled half hidden in the Androscoggin Valley, he carried with him something more than the memories which linked him so strongly to the old place and the aged pair remaining there. It was a simple little something, and possessed of very trifling meaning, one would think. Clyde thought differently. It was not a picture, and yet it was a more beautiful one than artist ever painted, as he saw it. It was not a story, but a sweeter than it told to him never was listened to. It was merely a myrtle leaf—an evergreen token that he carried carefully next his heart all the way to the front, and which he guarded almost reverently through the memorable days that crept by after his regiment was assigned to actual duty.

It was the best company he had, often. He fell into the habit of taking it from its resting place, when the camp fire gave out its flickering light and he fancied his comrades were asleep, or when alone on picket, and looking at the pretty picture it sketched for him, or listening to the whispered tale it breathed. But he concealed it from all other eyes. There was a touch of holiness about it, somehow, and he felt that a curious gaze would desecrate it. Once his messmate, Lieutenant Lange, came upon him suddenly, as he sat holding the fragile leaf by its stem, half lost in a dreamy reverie, and his abrupt "Why, what on earth is the man dreaming over?" caused Clyde to blush as rosy as did ever a young girl caught in reading her first love letter. He showed it to Lange, then; smiling furtively as the Lieutenant casually remarked—

"Only a myrtle leaf, to me; but to you"—

Lange stopped there. He had no wish to appear curious or inquisitive, and knew, beside, that Clyde Hammond kept his own secrets until such time as it pleased him to confide in others. They were friends—these two; friends in that degree known only to those who face death together almost daily. Each knew that there was manly stuff in the other,—that, whatever should come to him in the fortune of war, the other would be a true helper in so far as in him lay.

Through several severe engagements they had battled bravely, and, when their first year of service was ended, had well earned the name of veterans. Hammond had been promoted from the ranks to a Lieutenantcy, which promotion pleased him no more than it did his friend Lange; and while in their hearts there was a deep sense of gratitude for the good fortune that had thus far attended them, they looked forward to further efforts in behalf of their country with a lively anticipation. It was hardly possible that throughout the future strife both should go unscathed, and Hammond, looking more frequently than ever at the dry and brittle token he still cherished, thought fondly of the little fingers that once pressed it, and wondered if they would ever again be clasped in his.

Then came one of those bloody conflicts which tested so sorely the loyal ranks, and the reports of which fairly chilled us as they thrilled over the North-land. It was at Antietam, I think. The —th New Hampshire Volunteers were in the thickest of it, and suffered fearfully. In a charge which the regiment participated in, towards evening—a headlong, blind sortie, through a piece of wood—Hammond and Lange became separated, and after a retreat had been effected, the former was missing. Just at twilight, while the battle was yet raging along another part of the line, Lange ventured again into the wood. He hoped to find his friend alive, and to be able to bring him in. Many a form with the soul gone out of it, he stumbled over in the shadows; and many a poor wounded fellow looked pitifully up at him as he closely scanned the features of those lying around. His search was rewarded, finally. In a little hollow, by an old stump, Clyde lay, a bullet hole through his body, and the red current of life oozing out slowly. He could talk yet.

"I'm pretty near done for, old fellow," he said, through a bit of a smile, "but I am glad you came. You can deliver a message I began to fear must always go ungiven. You remember the myrtle leaf, Lange? Well, there's a little girl away up there among the granite hills, who gave it to me the night before I left home. She's made the place more gladsome for the old folks than it might have been, for she's a merry-hearted body, and like a daughter to them. But she's not my sister, though my companion as such for a dozen years, and she was to be my wife when I got back."

His voice trembled perceptibly, but he swallowed a draught from Lange's canteen and continued:

"That's what the myrtle leaf meant to me; but its over now, and I want you to put the leaf in a letter and send it to Nell, along with a few words just to let her and the others know that I'm not coming. You'll do it, won't you? you know where it should go."

Lange found the simple keepsake, where it had all along been carefully hidden, and at that moment Clyde fainted entirely. Firing near at hand compelled Lange to move back to his regiment, and with never a thought but that his friend was among the dead, he that evening wrote the promised message to the little girl up among the mountains, and inclosed in it the myrtle leaf she had given when she gave her troth.

CHAPTER II.

It was midsummer-time when the message reached its destination—midsummer amid the gray New Hampshire hills. There had been breaths from the sunny South which were wafted even into the peaceful valley where the Hammond homestead was situated, and which had a taint of blood in them. But none of them had breathed upon the senses of the little home circle that now waited anxiously for news from their "boy in blue." He had been kept safely so long that they were beginning to think him proof against the dangers of war, but when news of the battle came and was not speedily followed by assurances of his welfare, they doubted. In the midst of their anxious doubting and hoping, the message came.

It was just such an one as came to many and many another home—just such an one as cut to thousands of other hearts—saving, perhaps, the leaf of myrtle. This sanctified, in a certain sense, the grief of Ellen Vane to herself. She had not known of his keeping it. He never had mentioned it in his letters, and she had almost forgotten the giving of it. How much it had been to him—how much her memory had been to him—the little faded leaf eloquently told. As something sacred, therefore, she laid it aside. And as he had brought it forth often, to see the picture which it hid from all others, so she as often drew it from its receptacle, to read in it a sadder story than ever a young heart ought to know, and to see in it a sadder picture than ever loving eyes ought to behold. The dry leaf was to her a semblance of others of its kind, which she saw evermore running over a lonely grave.

Midsummer died away in a smoky haze; the harvest moon came and went with its silver sheen; Autumn put on its many-colored robes of royalty and reigned in splendor. Over the Hammond farm, meanwhile, the sunlight and moonlight seemed to shine dimly. Things were not as they used to be before the reading of that terrible message. Nell was a merry-hearted body, as Clyde had said, but her merriment was not now as genuine as formerly. She saw the picture of that lonely mound, alas! too often; and when a grave comes into a heart the laugh goes out. The old folks, whom she endeavored to comfort, seldom spoke of their loss in her presence, but together they spoke of him who was slain with a fond tenderness, and of their lonely future with a shade of despondency lightened only by the faith that it would soon be brighter "over the river."

The dull, leaden days of November crept on apace. There was a chill in the hearts of Ellen Vane and those whom she knew as father and mother; there was a chill in the air around them. The snow came drifting silently down, at length. During all the weary day preceding Thanksgiving the feathery flakes floated through the still atmosphere, while the fields grew white, and the trees nodded to each other with new and spotless plumes, and the

A PENNSYLVANIAN.

A MISSISSIPPIAN.

CITIZENS OF THE UNITED STATES, ACCORDING TO POPULAR IMPRESSIONS.—No. III.

seringo-bushes disappeared in strangely grotesque forms. Before the twilight settled over the new earth with an uncertain dimness, Ellen drew forth her myrtle leaf once more, and dreamed over, as she looked upon it, the brief happiness that gladdened her young life, seeing still, through the thin veil of her dream, the grave that she fancied would never be shut out from her sight.

Morning dawned—Thanksgiving morning—calmly, clear and beautiful. Arrayed in its white robe the world seemed as pure as in the long-gone Eden-days. The hush of a holy silence was on the air—such a hush as might prelude the *Laus Deo* of all heaven's angels. It was a fit day for thank-offerings.

Thanksgiving should be honored at the Hammond farm-house as it had been honored there for half a century. Less joyfully, perhaps,—there would be no merry gathering, no happy meeting of old and young, no laughing evening games—but not the less sincerely honored. The outbreathing of thankfulness in the old man's prayer, after the morning meal, was no less fervent because of a tremor in the voice which uttered it. He could give thanks even amid his mourning.

Throughout the forenoon Ellen busied herself in preparing the Thanksgiving dinner. She took a sad kind of pride in making it rich and generous, like the old-time ones when they spread a more ample board, and feasted and made glad. Yet she thought sorrowingly of those, for they were the last. There would be no more. There might be something of gladness in the days to come, but they would not be like those gone by.

The last, her heart echoed, as the turkey, done to a delicious brown, was set upon the table. And as she thought of the myrtle leaf, she placed a fourth plate upon the board, and set a fourth chair by it. It was a sudden fancy of hers, prompted, she hardly knew by what, and when, at that moment, some one rapped at the outer door, her foolish little heart gave a sudden leap that frightened her.

"Have you invited a guest?" the father queried, as she stepped to give admittance.

She had no time for a reply. Not pausing for bidding to come, the visitor raised the latch, and entered. Her heart leaped again, and then stood still, and the daylight faded out of her sight for a moment as Clyde Hammond folded her in his arms.

"I gave up the myrtle leaf, my darling, but I clung to life," he whispered.

And as he told his story of slow returning to consciousness from that death-swoon on the battle field—of the weary months in Southern hospitals—and of the sickening longings for home—there were tears in the eyes of parents and betrothed, and a *Laus Deo* in the heart of each; while the thank-offering that went up from the old hearthstone was the frankincense and myrrh of souls that had known bitter sorrow, but were now filled with exceeding joy!

Wit and Humor.

THE IMAGE OF ITS FATHER?

A French journal relates that two ladies leading a little sucking pig by a string entered the Agen railway station three days back, but before taking their tickets asked whether they would be allowed to carry their pet into the carriage with them. This was refused, and the two intended travelers went away; some time after they returned, one of them carrying what appeared to be a baby, with its face carefully covered over. They took their tickets and were about to get into the train when the station-master, who had not forgotten their previous request advanced, and remarking "Oh, what a beautiful child!" passed his hand over its head. A grunt of satisfaction was the reply to his caress. The ladies, finding that their scheme was discovered, preferred to abandon their journey rather than travel without their strange companion.

"Oh! the Snow, the Beautiful Snow," will soon boast as many parodies as "Excelsior." List to these imaginative lines on the "Tail of the Pup:"

"Oh! the pup, the beautiful pup!
Drinking his milk from his beautiful cup,
Gamboling around so frisky and free,
First gnawing a bone, then biting a flea.
Jumping,
Running,
After the pony;
Beautiful pup, you will soon be Bologna."

Doctors and Quacks.—Dr. Jenner once sent a couple of ducks to a patient with the accompanying epigram:

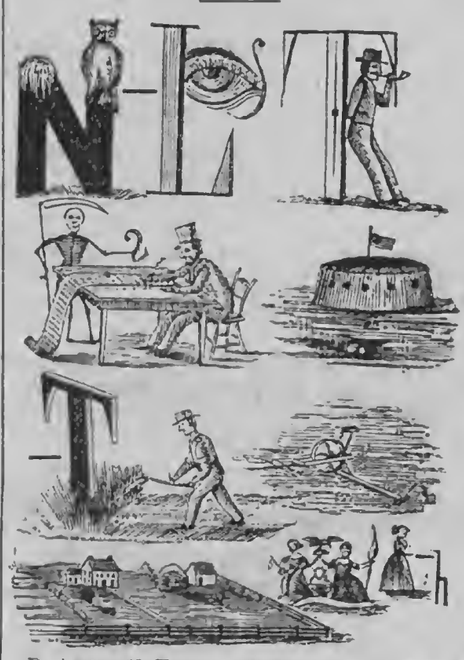
"I've dispatched, my dear madam, this scrap of a letter,
To say that Miss Lucy is very much better;
A regular doctor no longer she lacks,
And, therefore, I've sent her a couple of quacks."

Impromptu, in answer to the foregoing:

"Yes, 't was polite, truly, my very good friend,
Thus 'a couple of quacks' to your patient to send;
Since there's nothing so likely as 'quacks'—it is plain—
To make work for 'a regular doctor' again."

Corner for the Young.

ILLUSTRATED PRIZE REBUS.



Rochester, N. Y. G. B. H.

☞ To the person (residing out of this county) forwarding the first correct answer to the above Rebus (within two weeks) we will send the Rural New-Yorker for 1868,—or for one year from Oct. 1, 1867, if preferred.

☞ Answer in three weeks.

MISCELLANEOUS ENIGMA.

I am composed of 32 letters.
My 29, 1, 8, 12, 24 is an insect,
My 21, 23, 2, 27, 22 is a kind of tree.
My 25, 30, 29, 19, 3, 18 is a tool.
My 11, 4, 25, 20 is a measure.
My 31, 32, 5, 30, 22, 21 is a city in Europe.
My 7, 21, 26, 13, 17, 28 is a species of dog.
My 6, 10, 14 are alike.
My 19, 11, 25, 9 is an insect.
My whole is a Proverb.

ANSWERS TO ENIGMAS, &c., IN No. 929.

Answer to Illustrated Rebus:—Oxygen gas forms all combustible materials.

Answer to Miscellaneous Enigma:—Necessity is the mother of invention.

Answer to Anagram:
'Twas "faith and work," that vexing question,
They found not easy of digestion;
While Dan alone for "faith" contended,
Jane equally "good works" defended.

Answer to Mathematical Problem:—11,00803.

The correct answer to Illustrated Prize Rebus in No. 928 of the Rural has been forwarded by several individuals. To Alida Cadey, Nunda, N. Y., is accorded the prize, her's being the first correct rendering. Many amusing answers have been given, which we should like to publish. We have space for but two. One friend, writing from Glendale, Ohio, says: "The prize rebus in your paper, No. 44, is a puzzler. I have studied on it all day—till I have got a headache—with the following final result: 'Fallacies and policies are increasing small characters.' This is the very best I can do for it. I think rebuses are a humbug—they are so apt to give one the headache."

Another friend gives a poetical rendition, thus:

"Below the falls in a boat,
Isaac and I came o'er;
But appeared like mere specks
To the man who was lame on the shore."

Which is an odd way of putting it, to say the least. Here is the answer:—"*Water I sees and I screams.*" (Water ices and ice creams.)

THE BEST IS THE CHEAPEST!

ELECTION IS OVER!

PROSPERITY ABOUNDS!
WINTER IS COMING!

AND NOW IS THE TIME TO *SUBSCRIBE FOR*

MOORE'S RURAL NEW-YORKER,

THE GREAT TOWN AND COUNTRY WEEKLY.

THE RURAL is the Leading and Largest-Circulating Newspaper of its Class on the Continent,—superior in Value and Variety of Contents and Beauty of Appearance. It embraces a greater and better variety of Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with many Engravings, than any other Journal in the English Language,—for it comprises Departments devoted to or including

Agriculture,	Choice Literature,
Horticulture,	Science and Art,
Sheep Husbandry,	Education,
Grazing, Dairying,	Youth's Reading,
Rural Architecture,	General News,
Domestic Economy,	Commerce, Markets,

With Illustrations, Tales, Essays, Music, Poetry, Rebuses, Enigmas, &c., &c.

The Rural New-Yorker is a *National Journal*, circulating in every State and Territory of the Union, and also in Canada, Europe, &c. It Employs the Best Talent in all Departments. Its corps of Editors, Contributors, &c., comprises many of the most experienced and successful Farmers, Planters, Wool Growers, Breeders, Graziers, Horticulturists, Gardeners, &c., and includes Authors, Scholars, Scientists, &c., of note and ability. In brief the Rural is *Ably Edited, Profusely Illustrated, and Neatly Printed—Practical, Scientific and Useful—Moral, Instructive and Entertaining.*

Whether located in Country, City or Village,

YOU WANT THE RURAL,
YOUR FAMILY WANT IT,
YOUR NEIGHBORS WANT IT,

For it is adapted to the wants of all, and has thousands of enthusiastic friends and admirers in Cities and Villages, aside from its immense circulation among the Rural Population. Remember that it is *not a monthly* of only 12 issues a year, but

A LARGE AND BEAUTIFUL WEEKLY OF 52 NUMBERS!

THE RURAL NEW-YORKER comprises Eight Double Quarto Pages—is published in superior style, with Copper-faced, Type, Good Paper, and more and better Illustrations than any other Journal of its Class. A Title Index, &c., at close of Volume, complete for binding.

TERMS—Only $3 a Year. To Clubs of ten, $2.50 per copy. A new Quarter begins Oct. 1, and Vol. XIX in January. *Now is the Time to Subscribe and form Clubs.* Great Inducements, Premiums, &c., to Local Club Agents, and one wanted in every town. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free,—or we will send the 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, on trial, or as specimens, for only Fifty Cents. AMERICAN INSTITUTE, New-York		1863	1865

The "UNIVERSAL" is the only Wringer ever awarded a FIRST PREMIUM at the great Fair of the

AMERICAN INSTITUTE.

The above is the largest FIRST-CLASS PREMIUM LIST ever obtained by any article whatever of American manufacture, and more than FIVE TIMES greater than that obtained by any other Family Wringer. These Premiums were all taken on the UNIVERSAL FAMILY CLOTHES WRINGER at the times specified.

We do not attempt to mislead the public by advertising an old list of premiums, without date, by the "M. W. M. Co., manufacturers of," &c., taken mostly on Power Wringers—combined Wringers and Washers, and other articles not now in the market for family use—as is done by some of our would-be competitors.

OVER 300,000

OF THE

UNIVERSAL CLOTHES WRINGERS

Have been sold, which is more than the sale of all other Wringers combined, and the late improvements on the "UNIVERSAL," have greatly increased the sale. Sold to Dealers, Jobbers, and the Trade everywhere.

The celebrated "DOTY CLOTHES WASHER;" also, the new "LIGHTNING MEAT-CHOPPER" always on hand for sale. The Wringers and Washers are kept on hand in Cleveland, Chicago, Louisville and St. Louis and forwarded from these points at nearly New York prices. Terms Circular free.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

SELECTION AND PREPARATION OF WINTER FOOD FOR ANIMALS.—No. I.

THE unusual attention drawn to this subject of late, by experiments, discussions and essays, induces us to lay before the readers of the RURAL a brief resumé of this whole question, than which there is none more important to the farmer. We propose to take these up in their order.

First,—Inquiring into the qualities of food to be sought for in the various purposes for which animals are fed.

Second,—The best method of preparing food—cutting, cooking, &c.

SELECTION OF FOOD.

Very little attention has been given by the practical feeder to the selection of food to produce a certain result. The breeder should be well versed in the chemical qualities of foods, and of their adaptation to build up the various parts of the animal. The trainers of celebrated pedestrians and pugilists understand this matter much better than the farmer. WESTON, on his great walk to Chicago, is permitted to eat little else than beefsteak, chicken, eggs, &c., or what will give strength and endurance to the muscles. The race-horse is fed on oat-meal and eggs for the same purpose. The laborer who has constant strain upon the muscles, requires a diet containing much nitrogenous or muscle-forming matter, such as lean meat, beans, cheese, &c. The English and Scotch laborers are able to endure great fatigue on bread and cheese, because cheese is composed principally of casein or muscle-forming food. And when rearing young animals, we desire to expand the frame and muscular system rather than to lay on fat, we should select a food for that purpose rich in gluten or its equivalent. For developing the muscular system, foods are valuable in proportion to their amount of nitrogenous matter. And of this, corn and rye contain 12 per cent.; oat-meal and wheat bran 18 per cent.; oil meal, peas and beans 22 to 25 per cent.; wheat straw 3, corn fodder 8, meadow hay 11, pea straw 12, and bean straw 16 per cent. This is only flesh-forming matter. Of heat and fat-producing matter, these foods contain:—Corn 78, rye 69, oats 73, wheat bran 63, oil meal 51, peas and beans 50, meadow hay 53, wheat straw and corn fodder 35, bean straw 33, and pea straw 45 per cent.

This shows how to mix an appropriate food for young animals. Even the wheat straw, containing only 3 per cent. of flesh-forming matter, possesses 38 per cent. of nutriment, and when mixed with bran in the proportion of two quarts to the bushel of straw, makes a food on which animals will grow rapidly. It will be observed that oil meal, peas and beans are very desirable food for developing the flesh, and as they possess a large proportion of phosphate of lime, will also furnish material for the bones. The legumin of the pea and the bean, and the casein of the oil-bearing seeds, are identical with the casein of milk. This is an important fact, as it shows the propriety of feeding pea, bean and oil meal to cows to increase the production of milk. We have found from experiment that pea meal is, practically, more valuable when fed alone in producing milk than oil meal, but the best result was produced from mixing equal weights of oil and pea meal and two proportions of bran. This blends all the qualities requisite for the best feed for milch cows. That food which will produce the best quality of milk, will also develop the young animal into the finest proportions.

Corn meal contains so large a proportion of starch, which goes to keep up the animal heat and produce fat, that it should be used for the purpose of fattening animals rather than to produce milk or grow the young animal. We have found it much inferior to peas or oil meal or bran in producing milk. It will be observed that pea and bean straw and corn fodder possess too much nutriment to be neglected. When mixed with more concentrated food and steamed, they make an excellent substitute for hay. To feed with coarse fodder, the carrot, beet, parsnip and turnip make excellent winter food.

But the successful stock feeder, while studying the chemical composition of the various kinds of food as important suggestions, will, nevertheless, depend only upon practical results to guide him. It is not difficult nor expensive to bring all these foods, or those he can conveniently obtain, to the test of actual comparative experiment upon his own premises.

CUTTING.

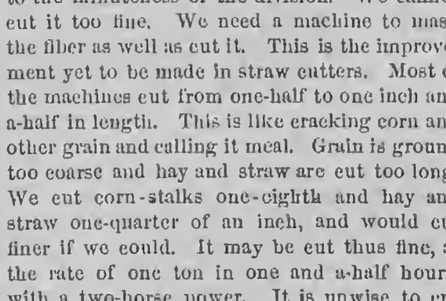
Upon the subject of cutting the food of animals there are still different opinions, but we have yet to find one who has made a thorough experiment and not found it beneficial. When we reflect that herbivorous animals in a state of nature crop only green, succulent food, and that we have subjected them to the use of dry, woody fiber, it is only reasonable that we should assist them in its mastication. We can by no method of cutting and cooking render hay, straw and coarse fodder more soft and succulent than green grass. We are in no danger of outdoing nature in that respect. And if it is beneficial to cut fodder, it is beneficial just in proportion to the minuteness of the division. We cannot cut it too fine. We need a machine to mash the fiber as well as cut it. This is the improvement yet to be made in straw cutters. Most of the machines cut from one-half to one inch and a-half in length. This is like cracking corn and other grain and calling it meal. Grain is ground too coarse and hay and straw are cut too long. We cut corn-stalks one-eighth and hay and straw one-quarter of an inch, and would cut finer if we could. It may be cut thus fine, at the rate of one ton in one and a-half hours, with a two-horse power. It is unwise to cut by hand for more than a few animals. No machine should be used which has not perfect working feed rolls to deliver the hay with regularity to the knives.

But there is another important argument in favor of cutting: that it enables the feeder to mix food of different qualities and values—hay and straw, corn fodder and hay, pea straw and hay, good and poor hay, &c.—thus saving all and many times paying the expense of cutting. And besides, it renders it easy to mix meal, bran, roots, &c., with the coarse fodder for any purpose desired.—E. W. S.

RURAL FARMERS' CLUB.

A Safety Gate Latch.

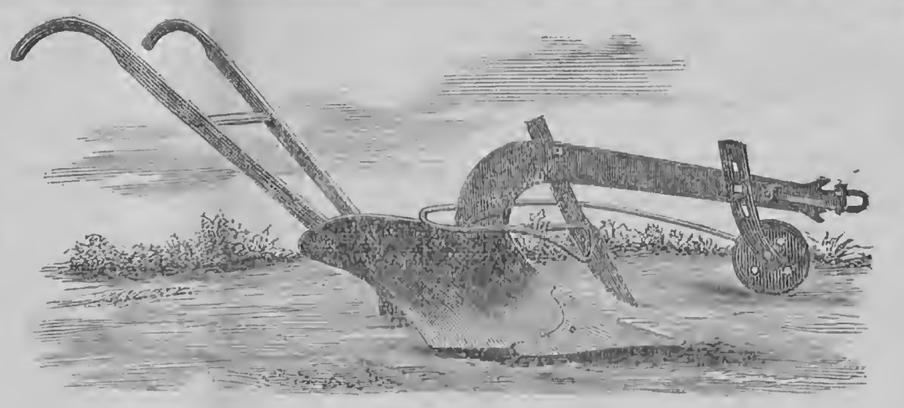
J. NIXON sends us from Utica, Iowa, the following plan of a gate latch which he has used for several years, and one that neither stock nor wind will open. A, represents the latch and



staple, the former being five inches long, one and one-fourth inch wide and one-fourth inch thick; the latter is three and one-half inches long. B, is the mortice in the post for the latch to play in; it is six inches deep, four high, and about two wide. A front view of the latch is also shown.

Care of Horses' Feet.

J. WARING, Columbus, O.:—"The most important thing connected with the care of horses' feet is the shoeing, and I think farmers are very apt to neglect caring for this as they should.



COULTER-CLEANING PLOW ATTACHMENT.

OUR engraving represents a simple attachment to a plow, intended to keep the coulter free from obstructions when plowing in stubble or turning under long manure. It consists of a rod of iron, one end of which is attached to the wheel of the plow in such a manner that its turning will give the rod a backward and forward motion. The rod passes along under the beam and is bent around its base, or the shank of the plow in wooden-beamed ones, just above the mold board and forms a loop against the coulter. This loop working backward and forward works off all obstructions from the coulter.

Every observer knows that a great many horses are lamed by neglect in shoeing, or by doing the work badly. In the winter time a great deal is neglected; shoes are left on too long, sometimes all winter, and the hoof becomes contracted and ill-shaped. If farm horses are not to be worked in winter or driven much on the road it is better to pull their shoes off at once. A little driving on soft roads, or working in plowed ground, is good at any time for the feet when shoes are pulled off that have been on for a long time. It is a very great risk to let horses run a long time without re-setting their shoes—after two months it becomes a long time—and it is equally risky to drive on slippery roads without being well shod. In nailing on shoes be careful not to nail very near the heel, and give the shoe spread enough so it will not contract that important part of the foot."

Renovating a Worn-out Farm.

S. S. C., Madison Co., N. Y., writes us as follows:—"I have a farm, the soil of which is a very light gravel, and it has been plowed and the crops drawn off for some twelve or fifteen years. The soil is badly exhausted; now which is the quickest and cheapest way to restore it to productiveness? Horse and cow manure can be had for one dollar per two-horse load. Is it better to pay that for manure or buy hay and stock each fall and feed on the farm? Or is some other way cheapest and best?"

Here is a fine subject for readers of our Farmers' Club to speculate on. What do you say to it? In this case apparently neither underdraining nor subsoiling are needed. For ordinary farm purposes we think S. S. C. can hardly afford to buy much manure at the price named. We should advise first, the getting of a good sod on the land. If it has been plowed and cropped continuously, grass will probably succeed much better than is expected, because it is a new crop in the rotation. Put the land in good tillage; sow clover in the spring, if it fails sow timothy in the fall. But sow clover and get it to grow if possible; top dress with manure at seeding time. Then if you can afford it, and wish to renovate the land as quickly as possible, let the clover go down on the field without pasturing or mowing. After one season of this, corn will grow on the inverted sod with the aid of what manure you can put on it. Feed the corn to stock and make more manure; sow barley or oats after corn, and seed again with clover. Sow plaster on the clover. Aim to work into a judicious rotation, to feed profitably all the products of the soil to stock, in order to make manure, and plow under a great deal of clover and clover sod.

Fish Guano for Corn.

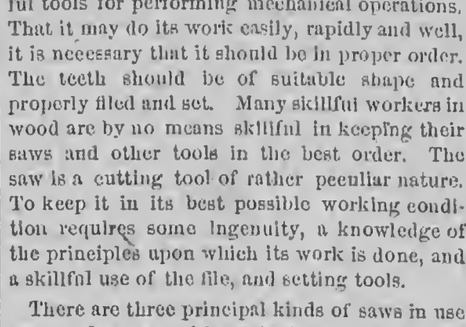
WE are in receipt of a sample of very nice corn from Mr. M. STEBBINS, Deerfield, Mass. It is a yellow, twelve and sixteen rowed variety, bearing some resemblance to the Dutton, though from the appearance of some of the ears, we "guess" it is a hybrid obtained by mixing varieties. Of its culture and yield Mr. S. writes:—"I raised this corn on fish guano alone. No other manure was used, and '*it was an enormous outlay*;' why, it cost $32 per ton; STEBBINS' corn costs him $1.50 per bushel!' Let us see. Seventy-five bushels at $1.50 per bushel bring $112.50. The expenses are one ton fish manure, $32; plowing and harrowing, $5; planting, $2; hoeing, $6 per acre. The corn fodder pays for harvesting. Profits, $67.50. One-half of the manure is left in the soil. "Then, isn't 1,000 pounds of fish just as good as 2,000?" queries some one. Well, let us see: there is a neighbor who has a good soil, on which he puts 1,000 pounds of fish; cost of planting, cultivating, &c., is the same as mine, and he gets about forty bushels per acre and the quality is inferior. Still, the cry is, "farming don't pay."

SAW FILING AND SETTING.—No. I.

THE saw is one of the most common and useful tools for performing mechanical operations. That it may do its work easily, rapidly and well, it is necessary that it should be in proper order. The teeth should be of suitable shape and properly filed and set. Many skillful workers in wood are by no means skillful in keeping their saws and other tools in the best order. The saw is a cutting tool of rather peculiar nature. To keep it in its best possible working condition requires some ingenuity, a knowledge of the principles upon which its work is done, and a skillful use of the file, and setting tools.

There are three principal kinds of saws in use among farmers, without including circular, or rotary saws. These three are the common cross-cut hand saw, the slitting hand saw for working lengthwise of timber, and the large hook-tooth cross-cutting saw. The teeth of each of these saws require to be shaped and sharpened in a peculiar manner to accomplish the work for which they are intended.

It is the object of saw teeth to cut rapidly ahead, affording themselves room in the channel or kerf which is made, for the easiest possible working of the instrument in its passage back and forth. In cutting across the grain of timber it is necessary the fibers of wood should be cut at each side of the groove the saw makes, so that the chips or dust can be readily removed. The teeth of a cross-cut saw are therefore shaped so that the cutting of the ends of a chip is always effected a little in advance of the chiseling operation which loosens and removes it.



A, in figure 1, represents a tooth of this shape seen from the inside of it. It is filed beveling, as shown, so that the line B, B, is a sharp cutting edge like the edge of ordinary shears, and B is consequently almost a point instead of a chisel-edge. B, represents teeth as seen from the outside.

Fig. 3 represents a groove or kerf made by an ordinary cross-cut saw in good order. The ridge continually left at the bottom of the groove shows the manner in which the saw does its work. From a consideration of the manner in which the cutting is effected, it will be seen to be quite necessary that the cutting edge of the teeth on the line, B, B, in fig. 1, should be straight at all events, not rounded as seen in the defective teeth shown in fig. 2.

This illustration (fig. 2,) also exhibits a very common defect from the unskillful use of the file, by which every other tooth is shorter than the rest. The surface touched by the file, of all teeth of this kind, should be a perfect plane, not *rounded* or *uneven*, and the lines forming the cutting edges straight, excepting the deviation caused by the "set." The cut of this outer edge and of the extreme point is very important in cross-cutting saws. Where there is any failure of this, the saw will not freely cut its way. Much pressure and friction result against the sides of the teeth and blade of the saw and it works with difficulty.

In fig. 1 the teeth, A, A, A, are seen from the inside, those marked B, B, from the outside. By setting the points of the teeth are bent from the inside outwards. In very fine-toothed saws the whole tooth is thus bent or "set," but in ordinary hand saws and the like, not above ¼ to ⅓ of the length of the tooth should be taken. The object of the set being that the cut of the teeth should be somewhat wider than the thickness of the blade, and enough of the point of the tooth should be taken in the set to enable it to carry forward the dust as fast as it is loosened. If too little of the point of the tooth is set, the chips will rise and slip by the side of the teeth. If too much of the length of the tooth is bent out there is unnecessary friction in passing through the kerf. In all cases the widening caused by the set should be the least possible with the easy working of the saw. L. W.

GATES AND POSTS.

IF our odd JOBS are not done up this fall, the *weather*, that old scape-goat for human delinquencies, is not to blame. Our days of grace have been multiplied beyond all legal precedence.

"Taking the opportunity," I have been overhauling some gates and bars—don't smile at *bars*; they are older than you—oh, that's the objection to them! Three or four boards, light and strong, can be soon removed, and where they are but seldom used, are cheaper and more durable than gates. Some of the modern gates are cheap and do not require very strong posts, but I am persuaded that if the old *swing gate* had never been seen, and I could get it patented, I could beat all competitors—with less lying.

More care should be exercised in setting posts. It is very absurd to go through all the formalities of preparing posts, and setting and hanging gates, and have them tumble down in four or five years. The difference in the first cost of the timber is but a few shillings;—the final difference between a good post and a bad one is a good many dollars. A gate does not ordinarily come down without a great deal of tribulation, loss of time, and, perhaps, damage to crops—it is pretty sure to take a bad time to come down; it is much handier to have it stay up, and if you take *good, seasoned, swamp white-oak*, and set firm, it will stay up thirty or forty years to my certain knowledge. I have such posts which have stood over forty years, and they bid fair to stand twenty years longer, while the best of rock elm rots down in ten or fifteen years, and poor brash oak in less time. I have a red beech that has stood thirty-seven years. Every farmer ought forthwith to put out a long row of locusts for future use; they are probably better than white oak. Soft maple is said to last well for posts. Lime and ashes, leached or unleached, are preservatives, and so is coal tar applied hot; but *look out for good timber* for gate posts.—H. T. B.

FEED AND BUTTER.—In a recent discussion before the Herkimer County Farmers' Club, Judge OWEN gave his views as to the influence of various kinds of feed for cows for the production of butter. He did not think turnips of much value in this respect—much less than potatoes which were regarded as beneficial for a change. The best results had been produced by feeding Indian meal—about two quarts twice a day to each cow. A number of experiments were made in preparing the meal, but the best results followed from feeding it in a dry state. With this quantity of meal and a small allowance of hay, a Holderness cow produced fourteen pounds of butter per week. The highest point reached was forty-one pounds in fifteen days, besides thirty quarts of milk, in the mean time, for family use.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

N. Y. WOOL GROWERS' ASSOCIATION.

THE Annual Meeting of the N. Y. State Sheep Breeders' and Wool Growers' Association will be held in Syracuse, December 12th, at 1 o'clock P. M.

HENRY S. RANDALL, *President.*
H. D. L. SWEET, *Secretary.*

THE attention of the Sheep Breeders and Wool Growers of New York is called to the notice of the Annual Meeting of the State Association, published above.

IMPROVEMENT OF AMERICAN MERINO WOOL.

H. D. TELLKAMPF (of the extensive wool house of TELLKAMPF & KITCHING, New York,) has enclosed us a paper read by him at a meeting of the National Association of Wool Manufacturers, Nov. 7th, on the improvement of Merino wool in the United States. We have not space to publish it entire, but shall call attention to some of its principal suggestions. Esteeming Mr. T. a gentleman of great integrity, and of extensive information in the wool *trade*, we shall aim to discuss his views courteously,—but at the same time we must speak our own candidly.

The paper starts with the proposition that this year's clip of wool "as a general thing has shown that too little care has been taken with the sheep" from the great number of fleeces which are more or less "matted and yellow" (cotted,) which Mr. T. pronounces unhealthy, causing a loss in working, and injuring the quality of the manufactured fabric. He attributes this to exposure of the sheep to inclement weather, irregular feeding, etc., and justly claims that well cared for flocks will be healthier, the mortality in them less, and the product of wool larger and more valuable.

We then have the following propositions:

"There is prevailing in this year's clip the influence of the Vermont breed, resembling the old Negretti Spanish breed, well known for many years for its heavy grease—causing in most cases the points or tops of the staple to become charged with a dark, hard substance, similar to pitch, and for this reason called in Austria and Germany *pitch tops*, which are dreaded by the manufacturers, who cannot scour this wool by the regular process, and have the trouble and expense of clipping the tops by hand, to say nothing of the loss of weight to them, seldom less than ten per cent. They have found at the same time that a wool without a perfect staple will not work or finish as well as that of a full or entire staple. Furthermore, the wool of this breed proved to be lacking in the necessary felting qualifications, and does not produce as valuable and salable fabrics as that of Silesian and Saxony Escurial breed."

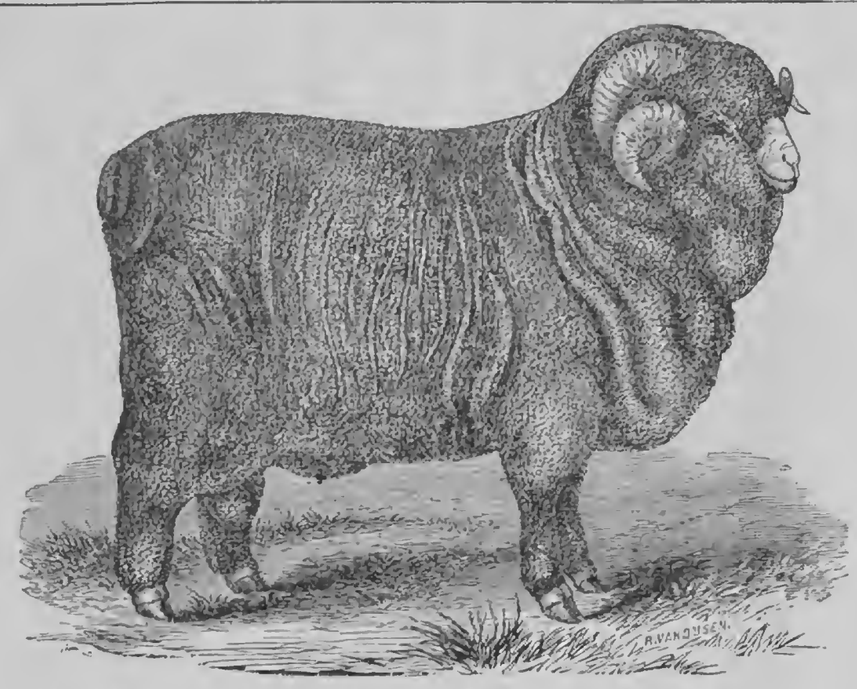
He complains that the production of this heavy "pitch top" wool is increasing; expresses astonishment that the wool growers of Pennsylvania, Virginia, Ohio and New York, "producing for years superior and higher priced wool than Vermont," could be induced to make such a change "merely for the production of heavier fleeces;" but he adds:

"A single or double Vermont crossing, but no more, of the flocks in this country, might have led to some good similar effects with those experienced in the superior Escurial breed of Saxony and Silesia, where the breeding in-and-in for years had weakened the strength of the animals and the fiber of the wool. But for this mixture of blood, nothing but the best breed of Negretti was considered advisable or has proved beneficial. It is very obvious that we have too much of the Negretti blood in our flocks, and to counterbalance it favorably, the Escurial breed of Silesia and Saxony must be used without delay."

After making some further comparisons between the Negretti and Escurial Merinos, unfavorable to the former, he proposes importations of the latter, either by the growers, or a company of manufacturers who shall distribute them at cost, adding a moderate commission. But he thinks nothing would "speak plainer to the growers" than the establishment of a sheep farm of 400 or 500 acres in a healthy neighborhood near New York city, on a capital of about $100,000. He thinks it would do to commence with a flock of 200 ewes and eight or ten rams, but he recommends double those numbers. He closes by suggesting some details in regard to sales, expenses, selections, management, subscriptions, &c.

Let us review some of Mr. TELLKAMPF'S propositions in the order in which they are made. He objects to Vermont, or as it is now generally termed "American Merino" wool, which he describes, at least by implication, as "*in most cases*" covered by a "pitch top" which must be cut off at a loss of ten per cent. in the weight. Who has heard of this before? We certainly have heard of individual instances of this kind, but in all our conversation and correspondence with *manufacturers* on the subject of the usual condition of our American Merino wool, and on the special subject of its "grease and gum," we never heard an intimation of the general fact asserted by Mr. TELLKAMPF. Moreover we have been directly cognizant of the mode of scouring hundreds of fleeces clipped from American Merino rams and ewes of the heaviest and oftentimes the yolkiest and darkest colored fleeces, and we *know* that no difficulty was experienced in scouring them clean, without clipping off the outer ends. Mr. TELLKAMPF is mistaken in this particular.

And who before has discovered that American Merino wool is "without a perfect staple" and lacks "the necessary fulling (i. e. felting) qualifications?" Not our American wool manufacturers certainly, for if so, the leading ones in the United States have gratuitously both stultified and falsified themselves on this very subject. Their National Association has in addresses, reports and other papers adopted by it and circulated throughout the country, repeatedly and emphatically borne testimony to the very great excellence of American wool for all the fabrics to which it is applicable.



MESSRS. SHORT'S RAM "TIGER," (at 4 years old.)

"TIGER" was bred by WM. R. PITTS of Honeoye, Ontario Co., N. Y., and purchased when a lamb by J. C. & S. T. SHORT of Hemlock Lake, Livingston Co., N. Y. He was got by the Cub Ram, by Old Dick, by Old Robinson of Vermont. Dam of Cub by the Peck & Leach Ram, bred by Mr. CUTTING of Vermont. Dam of Tiger, bred by J. C. TAFT of West Bloomfield, N. Y., and got by his Gardner Ram by Young Matchless, by Wooster. Weight of fleeces respectively 19¾, 25⅛ and 28⅝ lbs.

If Mr. TELLKAMPF merely means to say that American Merino wool has not *equal* felting properties with that of Escurial Saxon sheep, he is perfectly correct. Everybody knows that the latter is the finest, and that the finer Merino wool is the higher is its felting properties. If he means to say that American Merino wool is not as well adapted as the Escurial Saxon for the manufacture of broadcloths, and other fabrics requiring the same kind of wool, he is also correct. The wool of the improved heavy fleeced American Merino is both *too coarse* and *too long* for fine broadcloths and some other special fabrics. But what of that? It *is* signally adapted to manufactures which consume fifty or a hundred times as much wool as do the broadcloth and other manufactures of the United States requiring the finer wool. Records whose accuracy Mr. TELLKAMPF will not dispute (see them in Practical Shepherd pp. 91–94,) prove that when the class of sheep now recommended by him (the Escurial Saxons) abounded in this country, their wool did not sell for enough more than that of the Spanish or American Merinos to come even near the additional cost of producing it.

Mr. TELLKAMPF may be unaware of the fact—he may not have been a resident of the United States then,—but we can inform him that prime Electoral sheep, prime Escurial Saxons have been imported into and tested in the United States when our broadcloth manufactures were far more extensive than they now are,—and that [illegible] the delicacy of the constitutions of these sheep, their lightness of fleece and its small additional price over American Merino wool, they proved wholly unprofitable and were almost universally abandoned.

To prevent misapprehension on the part of any of our readers, we wish them to note the fact that the Silesian sheep imported into the United States by Mr. CHAMBERLAIN, do not belong to the class recommended by Mr. TELLKAMPF. Mr. C.'s earlier importations were crosses between Negrettis and Infantados—without the Escurial blood. His last importation was of pure Negrettis. They are fine wooled, large, strong sheep, with abundance of yolk,—but we venture to assert that not one of them has any of that "pitch top" on its wool which requires to be clipped off, and which Mr. TELLKAMPF declares to be a characteristic of the variety.

When the demand for medium fine wools for manufacture in our country is 50 or 100 per cent. greater than the demand for broadcloth wools; when the American Merino concededly supplies medium fine wools which are entirely satisfactory to the manufacturer, and which, by their unusual strength and wearing qualities, are peculiarly profitable to the consumer; when the sheep itself has proved peculiarly hardy, productive and profitable (when any breed of fine wool sheep are profitable)—we ask if it would be judicious to attempt to convert the American Merino sheep generally into a broadcloth wool sheep, by crosses with the Escurial Saxon? We confess, with all due respect for Mr. TELLKAMPF, that the proposition strikes us as a self-evident and unmitigated absurdity.

Had he made a different proposition, viz: that the Escurial Saxon be again introduced to meet a special demand in our market—on the sound hypothesis that the United States should as far as practicable produce all the wools which are consumed in them—we could have made no objection to the experiment, though we have supposed that we already had enough sheep in the country bearing broadcloth wools to start with, viz: the "Silesians," and the descendants of older importations which are still to be found in Southeastern Ohio, and adjacent portions of West Virginia and Pennsylvania. If Mr. TELLKAMPF thinks otherwise, and if the manufacturers fail, (as we have no doubt they will,) to adopt his proposition to import sheep for the purposes mentioned, we suggest that he himself import one or two hundred of his favorite sheep, and attempt their introduction among American sheep farmers, in such way as he deems best. To a gentleman of his large wealth the loss, even if the experiment should not succeed, would be of no consequence, while in the opposite event both the credit and the profit would be due to his philanthropy and enterprise. Let us see these sheep at our Fairs alongside of the American Merino, the Silesian and the other fine varieties mentioned. Should the Chicago Exposition be decided on, there will be abundance of time to import a lot of twenty-five, fifty, or a hundred Escurial Saxons from Germany for exhibition there, to test the pulse of public opinion concerning them. The good motives of the importer and exhibitor will at least ensure them a kindly reception, and, we doubt not, proper appreciation. If the verdict is favorable, Mr. TELLKAMPF will have opened a good business for himself or for others; should it be unfavorable, he will learn his mistake.

Condensed Correspondence, Items, &c.

YOUNG ROGERS' SCOURED FLEECE.—With the cut and pedigree of Mr. A. LEACH'S ram Young Rogers, recently published in the RURAL, we accidentally omitted to state the weight of his scoured fleece. We have a letter of HUNT Brothers, proprietors of Custom Woolen Mill, North Bloomfield, N. Y., stating that the fleece weighed, as they received it, 23 lbs.; that when cleansed and dry it weighed 7 lbs. 3 oz., and that they "considered it more than ordinarily clean." A sample is forwarded to us. It appears clean, and is of fair quality.

CUTS—PEDIGREES.—We must again request that gentlemen be more particular about stating to us that cuts of their sheep are in the RURAL office, until they are assured of the fact. If properly forwarded by express or mail they ought. It is true, to arrive there as promptly as a letter. When the owner so forwards them, let him inform us, giving time and mode of forwarding, and then we will ourselves ascertain whether and when they reach their destination. The [illegible] RURAL office on the 19th of November, or it would have appeared, with the pedigree, last week. There are still in the office cuts of sheep whose pedigrees have not been sent to the editor of this department. Let them be sent to us, or let the owners write us that they wish the cuts published without pedigree.

PALE DISEASE.—In regard to this malady, T. P. SKINNER, Sego, Perry county, O., writes us:—"The disease is tape-worm, and the remedy is pumpkin seeds, steeped in warm water (not boiling hot.) Either take the outside hull off, or grind the seed; pour a half gallon of warm water over a pint of seed, let it steep two or three hours, and give each sheep affected about two gills once or twice a day for, say three days, and if it does not cure the disease it is because the sheep is reduced so low that it can not rally at all. The way I got the information was from a conversation with my brother, C. J. SKINNER, M. D. of Somerset, in this county. After near one-half of my tegs had died in the fall of 1865, I had examined them carefully and found every one to be infested with tape-worms. I asked what would kill them. His answer was that pumpkin seed was a remedy for the human race in such cases, and bade me try it on my sheep. I did so, and the result was that not one died thus treated, unless reduced to a very low state. Last year I prevented the disease by simply feeding the seeds to the sheep, and this fall the disease has not appeared in my flock."

If the pale disease is actually caused by tape-worm, the remedy above stated is undoubtedly a good one. So would be oil of turpentine administered in cathartic doses. But we are not prepared to believe that this worm, so rarely the cause of death in other animals, produces so widespread destruction in sheep; that is, we are not prepared to believe so without proofs which Mr. SKINNER, if he possesses them, has failed to furnish. We ask him for the facts which show that the disease is produced by tape-worm. Let him give us the details of premortem or post mortem examinations which establish that conclusion. In how many instances has he found tape-worms in the intestines of sheep? *Where* did he find them in the dead subject? What were the size, length and other appearances of the worms? We suggest to him to submit some cases to his brother, Dr. SKINNER, for post mortem examination, and request him also to communicate to us the result. Let others who find the "pale disease" in their flocks do the same. If Mr. S. has actually ascertained the cause of the disease, he has made a very important discovery.

POULTRY SHOW AT TORONTO.—The Canada Farmer states that the fall exhibition of the Ontario Poultry Association, which took place at Toronto on the 6th and 7th of November, was a highly creditable and successful one. The number of entries was 298, exceeding the spring exhibition by nearly one hundred. Nearly the same number of entries was declined in consequence of being offered too late. The most noticeable birds were of the Cochin China, Brahma Pootra, Gray Dorkings, Spanish, Hamburg, Poland and French varieties. The display of turkeys, ducks and geese was a creditable one. In the turkey line, BURR H. NICHOLS of Lockport, N. Y., exhibited one which weighed over 40 pounds and walked off with the first prize. We infer from this second show of the Ontario Association that its future prosperity is not problematical.

Bee Department.

BEES.—COMBINING AND WINTERING.

I SEE that some one in the RURAL suggests that weak swarms be united so as to make one strong hive out of two small swarms. As most do not have movable combs they cannot do it in the manner recommended; yet it is desirable to unite them. The trouble is how to unite, *honey and all*, in immovable combs; that he does not answer.

Objection, too, is made to wintering in cellars. This is merely a fancy, without a fact to sustain it. You might as well say to winter wife and child in a house with comfortable coal stoves that keep fire all night weakens them, as to say bees are weaker because kept in shelter and in a cellar. Now when I began bee keeping I was told that to take off honey boxes would cause them to "run out" and "be worm eaten." But yet I kept on. It was in vain I said lift my hives, they are strong in honey. Those that I have taken fifty and seventy-five pounds of honey in boxes off of, are twenty to thirty pounds strong in honey in the brood chamber; what more do you want? So I have seen more than one man who sulphured to death his bees, run out of them; but mine do not,—and that, too, when every year, I get more and more box honey, as I learn better how to do it. So you will not be surprised when I say not the least of *my success in box honey and in strong swarms lies in the wintering in the cellar.* For see the reason. It is that in the cellar they have less to do of that incessant breathing or panting in the cold, that you see, whenever you open a hive in a cold day. *This panting to heat up the hive makes the hive roar with the buzzing labor all winter long, when out of doors and unprotected*, as any one can prove by putting his ear to an out-door hive any cold winter day. In the cellar, the temperature being right, they are very still, and have none of this lung-panting labor to do, which is a great gain. In the cellar, too, they eat less of the surplus honey in the brood chamber; and the consequence is that they use it in the early spring to raise brood or young bees, and thus you get powerful swarms, much more so than without it.

If you can get better calves, colts and lambs by wintering their parents out in the middle of a large lot, without shelter, then you can get better bees, out of doors, by the cold, that they were never calculated to endure; for the bee came from warm climates originally. But to winter well in a cellar needs several things. The first is *good ventilation of the hives.* This I give by one hole at the top of the hive one inch in diameter covered with gauze wire; and at the bottom of the hive covering the entrance by gauze wire. This is to prevent the bees, if a few warm days come, from getting out and being lost or annoying you in the cellar. And to be secure against the accidental closure of the entrance by dead bees, I make a hole one inch in diameter one and a half inches above the entrance, and cover it with gauze wire. The reason why ample ventilation in the cellar is absolutely necessary is to prevent the dampness of the combs that would otherwise come by the cold of the cellar. The second requisite of the keeping of bees in the cellar is to have a cellar as near 35 or 40 degrees of the thermometer, (FAHRENHEIT'S scale,) as can be. If the temperature rises above 45 degrees the bees get uneasy, buzz and try to get out; and many die in their uneasiness. If the temperature is only six or eight degrees above freezing they are quite quiet all winter long. The third element of success in wintering in the cellar is that it be still. Noise excites the bees. Then they hum and get the hives very warm, and many die in the attempt to get out. They also eat more if disturbed. So the cellar should be as free from noise as can be. Yet the common walking in the cellar and overhead gives but little trouble. The bees soon get used to it and do not mind it. The fourth requirement is darkness. To have bright light, or indeed any light at all on the hives, causes the bees to try and find light places and heat. So the greater the darkness the better for wintering quietly.

If all these requisites are had the bees in a cellar are quiet, and the winter soon passes away to them; they eat but little, sleep or rest a good deal, just as they do when they cluster outside of a hive for days in the summer, when there are no honey plants or honey box room, and are not over full of fecal matter; some die and fall to the bottom boards; and they come out in the spring good and strong; do better every way, *and are far less care to the kind hearted bee keeper* than the out-door, cold, heartless plan of raw cold and ice.

The only out-door plan that I approve of is to get the hives close together in rows and back to back, so as to make them front in opposite ways. Then box them by a cribbing, so that the entrances will be open, and fill in the spaces between the boxing or cribbing and the hives with sawdust or chaff, at least four to six inches thick. By this plan any number of bees can be wintered well out of doors. If the hives are all of one pattern, and the cribbing just spoken of is made in good sections, and the sawdust kept dry, the same cribs and dust will answer for years. This lets the bees out, and yet packs them warm. Bees, I again repeat, have no mysteries, but are to be managed on the same common-sense principle as anything else.

I am not a very old bee keeper, yet I have learned by experience that nine-tenths of the old bee lingo are false. That a good understanding of the bee and its habits, and common-sense makes my bees do well. That leads me to discard all silly fears of the cellar, and use it because I know it saves me and the bees a great deal of labor and toil, and honey too.

Ithaca, N. Y., 1867. S. J. PARKER.

THE Chicago cattle yards have 150 acres floored with plank. There are pens for 75,000 cattle, 20,000 sheep, and 20,000 hogs.

Rural Notes and Items.

ABOUT GIVING PREMIUMS FOR CLUBS.—As we occasionally receive a letter complaining because we give premiums for clubs, with the suggestion that subscribers would be better pleased were we to expend upon the paper the amount thus paid to agents, we offer a few brief remarks on the subject. We believe that our premium system *pays* both the Subscriber and Publisher—and the former quite as much as the latter, for the great *increase of circulation* it annually brings enables us *to expend more money in improving the Contents and Appearance of the paper than we could possibly do otherwise.* Compare the RURAL with papers which do *not* give premiums, and we think you will discover that we *make the best paper*, even while paying *the most liberal premiums*—the fact being that giving the premiums so *increases* our circulation, and consequent means, that we can, as we do, continuously improve the paper; and this little FACT demolishes the theory of those mistaken or narrow-minded souls who suppose or pretend that because we give premiums we must expend less upon the RURAL. The pages of our present volume (now nearly completed,) prove that we have expended far more during the past year than ever before upon the paper,—*for the benefit of its subscribers*,—and yet we have paid more in premiums! How, then, have subscribes lost by our liberality? On the contrary, has not every one gained thereby? We think so, decidedly,—for our expenditures for Contributions, Illustrations, &c., &c., have exceeded, by several thousand dollars, those of any preceding year. And we hope and expect to do still better during the ensuing year,—having assurances of such an increase of circulation as will enable us to both enlarge and improve the RURAL.

THE SEASON—WATER WANTED.—The "remarkably dry spell" still continues. November is usually liberal in its dispensations of snow and rain.—but the present month is a striking exception to the general rule. Up to the present writing (Nov. 23d,) the fall of rain and snow combined would scarcely equal the depth of half an inch, in this region. The season has been a remarkable one, on many accounts, but especially conspicuous for the lack of aqueous liberality. The sale of water in the streets is a novel feature in the commercial transactions of the "Flour City."

Drouth in the West.—Since the above was placed in type we have received the Prairie Farmer (Chicago) of Nov. 23, which speaks dolefully of the want of water—stating that "the 'oldest inhabitant' has never known a season of drouth so extended. No rain of consequence, in many localities, since June. Cisterns long ago gave out; wells are fast failing; and sloughs and small streams are dry. The effects are most disastrous."

AGRICULTURAL JOURNALS.—*Changes and Improvements.*—As the new year approaches we note proposed changes (which will be decided improvements) in several of our exchanges. For example, *Colman's Rural World*, a semi-monthly at St. Louis, (published by NORMAN J. COLMAN,) is to be issued weekly on and after Jan. 1st, with C. W. MURTFELDT, Esq., an excellent writer and experienced farmer, as associate editor. And the *Journal of Agriculture*, (late Farmer's Advertiser,) another St. Louis semi-monthly, published by L. D. MORSE & Co., is also to become a weekly at the above named date. MESSRS. COLMAN and MORSE are on the right track, as the farmers and horticulturists of the country are too progressive for monthlies and semi-monthlies. We give both of the proposed weeklies a cordial greeting in advance, wishing each abundant success.

A BRAG COW.—Mr. ASA W. FENNING of this city, saw a cow recently, the property of GEORGE MCKEE of Manchester, Conn., which weighed 1,400 pounds. The animal is a grade Durham, and is as remarkable for her milk and butter products as for weight. The family used what milk they wanted at the time of Mr. F.'s visit, and made from the remainder 18¾ pounds of butter per week. In this instance size and power go hand in hand, whatever may be the case in others. A calf from this cow ran with a farrow cow till it was six months old, when it was slaughtered. Its weight was 400 pounds. Who has a cow that can excel this one in productiveness, or a calf of like age of superior meat weight?

RECLAIMING A DESERT.—It appears that the French, in their occupation of Algeria, are gradually reclaiming the great Desert of Sahara from its sterility. There are four boring brigades engaged in putting down artesian wells, over one hundred of which are now flowing, and around which shrubbery and fertile gardens are multiplying. Two thousand have already been formed, and one hundred and fifty thousand date trees planted. These wells are relied upon to render the desert fruitful and beautiful.

THE HEN FEVER.—This disease—one occurring at repeated and short intervals—is again taking an active form. Poultry Associations are being organized in various States and sections thereof, and fairs announced, showing that the fever is about taking a general run through the country. This is as it should be. Chickens, turkeys, ducks and geese are good, severally and aggregately, and blessed be the man or society which shall give the production of them a new impetus.

WHEAT IN THE SOUTH.—According to notices in the Southern papers, it seems that the quantity of ground sown to wheat this fall will exceed that of last more than fifteen fold. Owing to the disorganized state of labor there, and the domestic tax on cotton, the growing of the latter will be much diminished the coming year. Wheat and corn promise better, as they are exempt from the tax and less liable to damage from unpropitious weather.

STEAMING FOOD FOR CATTLE.—One of our readers asks for the benefit of experience respecting the steaming of food for cows and other cattle. The best methods of steaming, the best kinds and mixtures of food, the proper quantities to be fed, and the saving effected by the process, are all questions of great interest to him, and no doubt to thousands of our readers besides. Read the leading article on our first page, and the continuation of the subject.

BIDDY'S FREAKS.—A few weeks ago Miss LAURA BROOKS of Brooks Grove, showed me two distinct eggs *firmly united at the ends*—regular Siamese twins; and as if that was not enough, another egg, almost black, having been laid in that way apparently to show that questions of color were not confined to *our* sort of folks.—H. T. B.

A TALL OAT CROP.—The Livingston Republican states that C. A. JACKMAN of Lima, in that county, raised the past season from eighteen acres of ground 1,300 bushels of oats. This is at the rate of 72 2-9 bushels to the acre. Until better advised, we place Mr. J. at the head of the oat department.

HORTICULTURAL.

THE NURSERY BUSINESS—FRAUDS, &c.

EDS. RURAL NEW-YORKER:—Why not more radical discussion—what need of so many mistakes in the nursery business? Granting it is difficult, complex in itself—that it has been of most sudden, rapid growth in this country, have we not gone far enough to begin to get some thorough system against mistakes and botch-work generally in the tree business?

Mr. Nurseryman, do you like botch-work poked upon you;—say you subscribe for the RURAL, and Mr. MOORE picks up the first paper that comes to hand, possibly one of last year's issue, and mails to you. To be sure it's a paper, but is it the one you want, or would you prefer regularly the latest issue? I know, too, on the other hand, the possibly undue sharpness of feeling suspicion in many minds towards nurserymen, so that it is oft-times utterly impossible to please, or enforce reason, between parties. It is all of the same piece,—mutual distrust, ignorance of their own wants, and the real necessities of the case. If the buyer realized one supreme fact—how utterly he was at the mercy of the seller as to the genuineness of the variety called for or bought, he would, *above all*, insist on the most absolute integrity and thoroughness in or knowledge of the business.

I do not propose a long essay; only to call the subject up. It is high time there began to grow out of all our vast nursery and fruit business a science as near perfection as possible, and with laws, checks and balances against mistakes and fraud; how far toleration should go and where exposure of the most public and unsparing character should be applied.

Now, all nurserymen, it may be said, are under the ban alike—there seems little encouragement for profound skill and integrity as against the worst knaves. Wearing out the patience of one locality or set of customers, it seems perfectly easy to find another just as open and easy prey—and so the dreary round continues. A scoundrel in other callings soon gets "spotted," and, except he can buy the police or change his quarters often, meets little encouragement.

Why not essays on the best system throughout of nursery and tree-dealing? Should agents or dealers be tolerated, and under what conditions and penalties? Why not some central light, sun or office, over seeing, managing for the craft of growers and buyers alike, and blasting the infamous rogues. It is truly a public necessity, and would be productive of infinite good. Growers and dealers should, and I believe will, gladly coöperate here for good. Surely none but rogues could suffer, and then there would be far greater encouragement for integrity and worth. Why has this been neglected so long? Who does not scorn to belong to a business, one of whose greatest encouragements seems this darkness and cloaking and covering up and impunity?

One thing would seem tolerably sure, that no man has a right in the nursery business who does not know most varieties by their growth—that new and old varieties should be defined in distinctive, leading characteristics of growth as well as fruit, for the common protection of every propagator and buyer. One other thing, that no man should be tolerated in the nursery business who does not labor unceasingly for absolute correctness.

Who will tell us how these needful points shall best be secured for this great and growing interest? Individual and co-operative effort can, and, if rightly directed, will—speak on!

EARNEST.

REMARKS.—The above communication is from one of the leading and most extensive nurserymen in the country. It would be well, indeed, if some safe guard could be thrown around the nursery business, whereby planters would be protected from sharpers and irresponsible dealers. At present we know of no better way for the buyer to follow, than to deal directly with well known and responsible parties, and shun unknown travelling agents and "tree peddlers."—EDS.

DISCUSSIONS AT POMOLOGICAL SOCIETIES.

THE editor of the Germantown Telegraph says he has all along had doubts of the advantages of a National Fruit Society, and adds:—"We cannot discover what it can accomplish practically in the way of promoting fruit-growing beyond attracting attention to the subject. Even State Societies are too large for useful purposes. We can readily see how much better the object can be attained by County and Township Societies. The adaptability of the various kinds of fruit to the different soils could be discovered without any trouble. At the St. Louis meeting the grape and pear swallowed up everything, there not being an honr to spare for the apple, which is the fruit of fruits."

Our impression is, that in nine cases out of ten, the discussions in the local societies are restricted pretty much in the same way. At each of these meetings the smaller fruits are generally considered first, and the discussions so protracted as necessarily to abridge the time devoted to the larger classes—especially the apple.

THE BEECH FOR HEDGES.

THE Maine Farmer is of the opinion that a firm, compact and durable hedge may be made by planting beechnuts along the line designated for the hedge. In proof of this it quotes from a "Hand-Book of Information for emigrants to New Brunswick," published at St. John, N. B., in 1854. The author says:—"Very solid and elegant hedges may be made with young beeches placed seven or eight inches apart, and bent in opposite directions, so as to cross each other

FIG. 1.—TRICYRTUS HIRTUS.

FIG. 2.—ANEMONE.

and form a trellis, with apertures five or six inches in diameter. During the first year they are bound with osier at the points of intersection, where they finally become grafted, and grow together. As beech does not suffer in pruning, and sprouts less luxuriantly than most other trees, it is well adapted for hedges. The red beech is reared without any difficulty from the seed; it grows rapidly, and if the soil is in good order, a handsome and sufficient hedge may be produced in five or six years."

NEW PLANTS.

IT is with great pleasure that we notice new and rare hardy flowering plants, because, through their being hardy, they withstand our cold winters, and push forth in the spring, stronger than in the preceding year, and in due season give forth an abundance of flowers, amply compensating their owners for the little care required of them. Not so with tender plants and annuals; these require annual sowing and planting, and in the fall of the year have to give way to Jack Frost, the destroyer of all tender vegetation. I herewith furnish you for illustration two specimens of choice and rare, hardy herbaceous plants. Figure 2 is *Anemone Honoime Joubert*, a beautiful large white *Anemone* that blooms in the beginning of September, and continues in blossom for a space of three weeks or a month. This is a member of a numerous family; there being over twenty varieties of tuberous rooted, and over forty varieties of herbaceous anemonies. Figure 1, *Tricyrtus Hirtus* is destined to become quite a favorite with the lovers of hardy plants. It is one of the most novel flowers that we possess, and we have no doubt that it would be readily mistaken by tolerable good judges for an orchid; its color is a lilac ground, spotted with chocolate spots, and blooms quite freely. Its habit is good, growing from about fifteen inches to two feet in height, and blooms about the same time as the *Anemone* mentioned above.

Rochester, N. Y., 1867. JOHN CHARLTON.

HORTICULTURE IN UTAH.

ST. GEORGE, Utah, Oct. 24, 1867.

DEAR RURAL:—The excessive heat of summer has given way to pleasant working weather and cool nights—just cool enough to *feel* frosty in the early morning, *without* the frost. Our crops are generally harvested; sorghum worked up, producing a superior article of sirup; peaches fairly gone, and grapes generally made into wine or raisins. Thus far the grapes first introduced, viz., Old Mission and Isabella, are the principal sorts now bearing; the Black Hamburg, Black Cluster, Chasselas and several other kinds are beginning to fruit, and many other sorts will soon be bearing. Col. WALTER E. DODGE of this city planted the first small vineyard of two acres of Isabellas, five years ago, and this year he is making over 1,000 gallons of wine. The Isabella here outdoes itself—grows immensely, is very prolific, and of good size and improved flavor. This region being entirely volcanic, the soil is generally poor and highly adapted to the growth of the grape, and I think not long hence it will be noted for producing fine wines and raisins.

Pears also grow well, are exceedingly prolific and bear early. At our autumnal fair there were several specimens on exhibition very fair in size and of delicious flavor. Apples thus far appear to do rather poorly in various localities, yet in some situations they seem to do fairly. There is considerable mineral in the soil throughout this region, comprising salt, niter, alkali and salts, and where any of these are too strongly developed the apple seems to feel it most. Peaches do finely, grow large and of excellent flavor, and the trees are very prolific in bearing, as well as plums, apricots and nectarines. Cherries not fairly tried; strawberries do well, but most other small fruits seem affected by the alkaline mineral.

This colony is yet young—only six years old—and yet the show of fruit at our fair was wonderful. Great interest is generally taken in the production of fruit, and much pains to import all the choice varieties. A Pomological Association was formed here over two years ago, and meetings once a week have regularly been held since. The Club have erected a building to meet in at an expense of nearly $2,000. It is a live institution.

Throughout all this mountain region showers of rain are seldom, so we have to turn the rivers and springs, make dams, canals, ditches and water sects, and once a week irrigate all our gardens, orchards, vineyards and fields, or they are lost. This makes double labor to raise anything. So we have to take small parcels of ground and cultivate well. I have a new fruit, just the past season come to bearing, a hybrid, cross between the cherry and plum. The tree is erect and looks like a plum, but the fruit most resembles the cherry. It ripens early—immediately after strawberries—bears second year, is very prolific, and buds well on peach stock.

Sweet potatoes grow well, and thus far we have not had frost enough to kill the tops.

J. E. JOHNSON.

COAL-TAR NOT SAFE FOR COATING FRUIT TREES.

A FEW years ago coal-tar was highly recommended as a coating for fruit trees, in the fall to prevent the girdling by mice, and in spring to protect against the borer, &c. As it was easily obtained, numerous trials were made. The first reports were favorable, as it did not appear the following year to injure the growth of the tree, and its pungent odor is very disagreeable to insects, mice and rabbits. Serving as it did the important purpose of protecting the tree against these enemies, if not injurious to the tree, it deserved to be highly prized; but on further examination, it was found to penetrate the outer bark, destroying its vitality, hardening it into a horny crust, excluding the air, stunting the growth of the tree, and if very young and tender, frequently killing it. We have found, in every instance, that the outer bark was killed, but as it did not interfere with the upward flow of the sap, the tree appeared to thrive as well the following season as before, yet afterwards, unless the bark was slit upwards, it did not grow as well. This tar is strongly charged with ammonia, and when applied to growing vegetation without great dilution, will kill it at once. The bark of a tree is porous, and anything which excludes the air is injurious when used as a coating.

GAS-LIME.

This is a preventive of injury by mice and rabbits, if put about the tree in a fresh state in the fall. In the passage of the gas through the lime, it becomes charged with ammonia, sulphur, &c., giving it a very offensive odor, keeping off all vermin as long as this smell lasts. We have found the application of gas-lime very beneficial to the tree, using one peck to a tree three or four years set. When composted with muck and manure it is an excellent fertilizer for oats, barley and wheat. At most gas works they are anxious to get rid of it, and will thank any farmer for taking it away. We regard it as valuable as lime slackened in any other way. It is well worth hauling, as a return load, ten miles by farmers who come into the city with produce. At present it most goes to waste, or is used to fill lots in cities. The unfavorable reports made on its use were caused, no doubt, by too heavy an application. Two loads of this lime composted with four to six loads of muck or scrapings of the barn-yard, are enough for an acre. But we think its best use is, first, to top-dress fruit trees, and the balance may go to other crops.—E. W. S.

PROTECTING TREES FROM MICE AND RABBITS.

EDS. RURAL NEW-YORKER:—I see in many papers much discussion on this subject, and inquiry for a preventive. Last winter mice were more than usually destructive, and even in nursery grounds thousands of trees have been destroyed in this county. In seasons when large quantities of snow remain late these little troublesome pests work under the snow and bark the lower part of the tree, while the rabbit goes on the top and gnaws the bark above. I have a method that is entirely effectual against mice, and unless the snow is very deep against rabbits also. It is entirely practicable in orchards.

I take common barrel staves (any other thin stuff will of course do as well,) and with a brace and bit bore four holes in each. This may be very quickly done by putting a dozen or more together in a vise. Three of them are then strung upon two pieces of string and tied around the tree, the staves forming a triangle, and if the edges are straight entirely prevents anything from getting to the bark. Of course, should the snow be very deep a rabbit might reach above the top of a stave, and in that case something of greater length would be necessary.

Greece, N. Y., 1867. E. W. L.

Horticultural Notes and Queries.

KEYES EARLY PROLIFIC TOMATO.—ABNER WINDER North Lewisburg, O., writes us that he "planted the above named variety by the side of several others, giving it precisely the same treatment, and that it ripened no earlier than the Fegee or Tilden. The vines were productive but the tomatoes small and knotty."

This tomato was sent out by a well known and responsible firm in Boston, with very positive assertions respecting its qualities and earliness. We have received no reports (and we have had a good many,) which justify the correctness of those assertions, or reflect any credit on the transaction.

TRANSACTIONS INDIANA STATE HORTICULTURAL SOCIETY.—We are indebted to J. S. DUNLAP, Esq., Treasurer of the Indiana State Horticultural Society, for a bound copy of its proceedings for 1867. It is an interesting little book of about one hundred pages, full of valuable horticultural information and experience specially adapted to that part of the West. The fruit list is important to planters of trees and vines, and the essays are practical and comprehensive.

OHIO POMOLOGICAL SOCIETY.—The annual meeting of this Association will be held at Sandusky Wednesday, Thursday and Friday, Dec. 4th, 5th and 6th, '67. There will be an exhibition of fruit and discussions on horticulture. A general invitation is extended to fruit-growers, both to attend in person and furnish specimens of fruit which they may desire to have examined and reported on. Packages may be sent by express to M. H. LEWIS, Sandusky.

STRAWBERRIES ALL THE TIME.—The Editor of the Waterbury (Ct.) American states that DARWIN WARNER, of that place, has furnished him with nice ripe strawberries every month since June. The last instalment was received the first week in November, "which for size, beauty of appearance and flavor, would compare favorably with those grown during the earlier weeks of summer."

SALE OF A VALUABLE VINEYARD.—The Raleigh (N. C.) Register notes the sale of the most extensive vineyard in the "Old North State," the property of Dr. JOHN WELLER. The purchaser was Dr. GARRETT, and the consideration paid was 600 acres of land in another section of the State and $8,000 in cash. The vineyard contains many varieties of the grape, but the Scuppernong is the favorite for wine purposes.

CATALOGUES, &c., RECEIVED.—Catalogue of Fruit, Plants and Vegetable Seeds. Address M. O'KEEFE & SON, Rochester, N. Y.

Domestic Economy.

CIDER VINEGAR.

EDS. RURAL:—In answer to the request of your correspondent "D. C. M. of Virginia," on the subject of making cider vinegar, I will state what little experience I possess on the subject. The whole chemical process consists in producing the vinous, or first fermentation, in which large portions of fixed air (carbonic acid) are given out,—and the second process is exposing it to atmospheric air, whereby oxygen is absorbed, producing the acidifying principle or acetic acid.

The common practice of exposing it in casks, whereby a very small surface is exposed, is so slow a process that it cannot be tolerated in manufacturing the article to any extent. It therefore becomes important to use a process by which a very large surface is exposed, by using casks lightly packed with hard wood shavings and the cider allowed to filter slowly through them, and running along wooden troughs—the longer distance the better—into a tank from whence it is again pumped back to the first reservoir; and to make it a quick and profitable operation, it must all be performed in an artificial heat of not less than 100 degrees of the thermometer.

There is a loss by evaporation, which may be made up by adding water. In fact, good, pure, rich cider will bear reducing, often one-quarter, after the first fermentation. The longer these apparatus are used the more rapid will be the conversion.

The great bulk of the vinegar in market is made from malt, and some by chemical processes—some of it very good—but it does not possess the flavor and sainbrity of pure elder vinegar. There may be some improved manipulations in the large manufactories of which I am not advised, but by the above process I have seen it successfully produced. AGRICOLA.

CHICKENS DRESSED AS TERRAPINS.—Boil a fine, large, tender chicken; when done, and while yet warm, cut it from the bones into small pieces, as for chicken salad; put it into a stewpan with one gill of boiling water; then stir together until perfectly smooth, one quarter of a pound of butter, one teaspoonful of flour, and the yolk of one egg, which add to the chicken, half at a time, stirring all well together; then season with salt and pepper. After letting it simmer about ten minutes, add half a gill of Madeira, and send to the table hot. We have tried this and know it be excellent—a little better *some* would say than the terrapin itself.—*Germantown Telegraph.*

APPLE FRITTERS.—Make a batter, not very stiff, with one quart of milk, three eggs, and flour to bring it to a right consistence. Pare and core a dozen large apples, and chop them to about the size of small peas, and mix them well with the batter. Fry them in lard, as you would doughnuts. For trimmings, take powdered white sugar or good molasses. They are good with either.

GOOD WAY OF COOKING ONIONS.—It is a good plan to boil onions in milk and water; it diminishes the strong taste of that vegetable. It is an excellent way of serving up onions, to chop them after they are boiled, and put them in a stew pan, with a little milk, butter, salt and pepper, and let them stew about fifteen minutes. This gives them a fine flavor, and they can be served up very hot.

TO CLEAN TIN COVERS.—Get the finest whiting; mix a little of it powdered with the least drop of sweet oil, rub the covers well with it, and wipe them clean; then dust over them some dry whiting in a muslin bag, and rub bright with dry leather. This last is to prevent rust, which the cook must guard against by wiping them dry and putting them by the fire when they come from the dining room; for if but once hung up damp, the inside will rust.

GRAPE VINES—IONA, IVES' SEEDLING, Adirondac, Israella, Delaware and Diana Vines well rooted. Also a large quantity of Delaware and Diana wood for sale. Prices low. Address A. FLANDERS, Cambria Grape Nursery and Vineyard, Lockport, N. Y.

JAMES VICK,
IMPORTER AND GROWER OF
FLOWER & VEGETABLE SEEDS,
ROCHESTER, N. Y.

VICK'S ILLUSTRATED CATALOGUE
OF
SEEDS AND FLORAL GUIDE FOR 1868,

Is now in press and will be ready to send out by the middle of December. It will make a work of about one hundred large pages, containing full descriptions of the

Choicest Flowers and Vegetables Grown,

with plain directions for Sowing Seed, Culture, &c. It is beautifully illustrated, with more than one hundred fine wood engravings of Flowers and Vegetables, and a

BEAUTIFUL COLORED PLATE OF FLOWERS.

Well printed, on the finest paper, and one of the most beautiful as well as the most instructive works of the kind published.

☞ Sent to all who apply, by mail, post-paid, for Ten Cents, which is not half the cost.

WOMAN'S HEART.

FROM THE GERMAN.

God's angels took a little drop of dew,
New fallen from the heaven's far-off blue,
And a fair violet of the valleys green,
Shedding its perfume in the moon's soft sheen,
And a forget-me-not so small and bright—
Laid all together gently, out of sight,
Within the chalice of the lily white:
With humbleness and grace they covered it;
Made purity and sadness near to sit;
And added pride to this, and sighs a few,
One wish, but half a hope, and bright tears two;
Courage and sweetness in misfortune's smart,
And out of this was moulded—woman's heart!

[*Cassell's Magazine.*

THE DEATH OF SUMMER.

By the lengthening twilight hours;
By the chill and fragrant showers;
By the flowerets, pale and faded;
By the leaves with russet shaded;
By the gray and clouded morn;
By the drooping ears of corn;
By the meadows, overspread
With the spider's wavy thread;
By the soft and shadowy sky;
By the thousand tears that lie
Every weeping bough beneath—
Summer, we perceive thy death!

Summer, all thy charms are past:
Summer, thou art wasting fast;
Scarcely one of all thy roses
On thy faded brow reposes.
Thrush and nightingale have long
Ceased to woo thee with their song;
And, on every lonely height,
Swallows gather for the flight;
While the wild wind's dreary tone,
Sweeping through the valleys lone,
Sadly sighs with mournful breath,
Requiems for sweet Summer's death.

[*Chamber's Journal.*

MURDERING THE INFANTS.

We wonder, sometimes, that half the children grow up to man and womanhood. The first causes of this wonderment are seen in the torture that over-nursing inflicts on them. And over-nursing—a superfluity of care—is probably as prevalent as colic or anything else babydom suffers. If the little one cries, nurse coaxes it with frequent offers of food, until the poor innocent's stomach is fearfully burdened. Dyspepsia comes from excessive eating, we are told. Is infant dyspepsia included in the physician's category of diseases? And if not, ought it properly to be counted out? We suggest that there is room to doubt whether a stomach which has done duty less than a half-year can perform faithful service every hour in the day without injury.

With two or three added years the child's over-nursing takes another form, but is not less objectionable. It is then of sufficient age to be benefited by out-door air and amusement. But motherly care, by far too zealous, prohibits much of this. A little fresh air, or a touch of cold, will work mischief, the fond mother imagines, and so the house-plant grows up pale and sickly—a puny thing, at best, to be the source of deep and well-founded anxiety in years to come. Faith in sunshine and a free atmosphere, on the part of the parent, would inure greatly to the child's profit. Time was when children suffered less from too much "bringing up," in certain respects, than they do at present,—when they "growed" (to use Topsey's expression,) to pretty good advantage, being allowed to run wild in the invigorating warmth and healthfulness of out-door life. There were not so many consumptive-looking young ladies then, as now. The chalky hue of complexion is really becoming fashionable. Probably the doctors are gratified to see it: as an admirer of rosy cheeks and the bloom of youth, we look upon it with a sad pity. When the summer returns we may make a special plea for air for the house-plants, but now our special pleading is to another point.

"Died of too much maternal solicitude," might fittingly be engraved upon the marble slabs that mark many little mounds in our grave-yards. While, however, an excess of motherly care, in some respects, proves detrimental to the child, a lack of it is manifestly quite as much so. Now that cold weather is upon us again, we are reminded daily of this fact. Hundreds of little girls walk our streets whose dress is utterly unsuitable for the season. It was so a year ago, and we fear another twelvemonth will bring forth no improvement. If an appeal to mothers everywhere would avail in behalf of all illy clad little ones, we would make it with the greatest earnestness. Any sensible person must admit that permitting a child's limbs to go naked in mid-winter is wickedly cruel. And yet the prevailing style of children's dress furnishes so meager covering for the lower part of the body that nakedness is certainly approximated to. A cotton stocking, stretched tightly around the limb, can have little warmth in it, and can be worth little to keep cold out. But it sufficeth;—at least so fashion says, and mothers foolishly subscribe to the dicta.

In this respect—and we trust they will pardon us for putting it so plainly—the mothers are culpably wrong. Because fashion cries out for the murder of the innocents, she should not be wickedly heeded. If the authorities in matters of dress will not contrive some style for children more conducive to their health and well-being than the present, mothers should invent it themselves. It is not enough that a child's feet be snugly encased in good shoes. The limbs need more than is given them. To put furs over your little girl's shoulders, and then send her out with almost naked limbs, is the height of absurdity, is even criminal. The extremities should be kept warm. Unless they are, the very worst results may be expected.

Mothers, one and all, are you murdering the infants? Consider the question carefully. They deserve better at your hands. You owe them a duty which you cannot innocently neglect,—which you cannot innocently ill do. It is not performed merely in the endeavor to rig them out in a tasty and prettily conceived garb. If this be all that is attended to, your children's blood will cry out to you from premature graves. Their comfort and health are in your keeping; if your trust be sacredly and faithfully kept, future generations will rise up and call you blessed. Mothers of the Rural Parish all over the land,—alike in Country, Village and City,—is not this matter worthy of both thought and action?

WHO RULES.

Fashion rules the world; and a most tyrannical mistress she is—compelling people to submit to the most inconvenient things imaginable for her sake.

She pinches our feet with tight shoes, or chokes us with tight neckerchief, or squeezes the breath out of our body by tight lacing.

She makes people sit up by night, when they ought to be in bed; and keeps them in bed in the morning, when they ought to be up and doing.

She makes it vulgar to wait on one's self, and genteel to lie idle and useless.

She makes people visit when they had rather stay at home, eat when they are not hungry, and drink when they are not thirsty.

She invades our pleasures and interrupts our business.

She compels people to dress gayly, whether upon their own property or that of others, whether agreeable to the Word of God or the dictates of pride.

She ruins health, and produces sickness, destroys life, and occasions premature death.

She makes fools of parents, invalids of children, and servants of all.

She is a tormentor of conscience, a despoiler of morality, and an enemy of religion, and no one can be her companion and enjoy either.

She is a despot of the highest grade, full of intrigue and cunning, and yet husbands, wives, fathers, mothers, sons, daughters, and servants, black and white, have voluntarily become her obedient subjects and slaves, and vie with one another to see who shall be the most obsequious.

THE WOMEN OF A SCOTTISH ISLAND.

A correspondent of the Glasgow Herald who recently visited the island of Lewis, in the Hebrides, says:—"The women do all the heavy work. They dig, they delve and hoe; they carry heavy loads of manure to the fields, and in the peat season you may see them all day carrying creelfuls of peat from the bog. You will often see a man trudging along the road beside a woman, but the creel is always on the woman's back. If they come to a river or ford, the woman crosses first, deposits her creel on the other side, and then returns to carry the man across. I only saw this once, but the farmers tell me it is a thing of every-day occurrence. When the creel is empty, the man sometimes slings it over his own shoulders, and then mounts upon the back of the woman, who carries them both across together. This, I am told is the only occasion on which, by any chance, you see a creel upon the back of a man. The woman in the rural districts here is, in fact, a beast of burden, and men, in looking out for wives, look largely to muscular development. A story is current among the English-speaking farmers that illustrates this conception of woman's mission. In the middle of one peat season, when labor was much in demand, a man who was supposed to be a confirmed old bachelor, suddenly married. A friend met him some days after. "What for did you take a woman like that?" said the friend. "Did you no hear," replied the man, "that my horse was dead?"

A MUSICAL CATECHISM.

What is a slur?

Almost any remark one singer makes about another.

What is a rest?

Going out of the choir for refreshments during the sermon time.

What is singing with an "understanding?"

Marking time on the floor with your foot.

What is a symphony?

Flirting with the soprano singer behind the organ.

What is a staccato movement?

Leaving the choir in a huff because one is dissatisfied with the organist.

What is a swell?

A professor of music who pretends to know everything about the science, while he cannot conceal his ignorance.

What are grace notes?

Greenbacks received for the quarter's salary.

What is a turn?

When one singer is discharged to make room for another.

How do you produce a discord?

By praising a lady singer at the expense of a rival, who overhears you.

How is a shake produced?

By catching the bellows boy asleep when the choir is ready to sing.

What is a flat?

A singer who supposes himself or herself indispensable to the success of the choir.

With Love the heart becomes a fair and fertile garden, glowing with sunshine and warm hues, and exhaling sweet odors; but without it it is a bleak desert, covered with ashes.

Choice Miscellany.

PAST PAIN.

Bygone years of passion and pain,
How in the distance do you seem?
Does the old bitterness wake again,
Or has it passed like a faded dream?

How, in the morning's cheerful light,
With the song of birds and the breath of flowers,
Do we think of the darkness and chill of night,
And the dreary weight of its lingering hours?

How, in the halt by the quiet stream,
Do we look on the hill-tops, bleak and bare,
And remember the lightning's angry gleam,
And the stormy wind that met her there!

Or, at the close of the summer's day,
When we sit in the shade, and our task is done,
How do we think of the scorching ray
That fell on us from the noonday sun?

Bygone years of passion and pain,
How has your weariness fallen to rest!
How has your fever, and fret, and strain,
Passed away from the aching breast!

Sweeter the rest for the toilsome day;
Calmer the sky when the storm is spent,
Pleasure may perish, but pain shall pay
The after grace of a deep content.

[*Boston Transcript.*

ABOUT RHYME AND POETRY.

In these days when the type-us fever prevails to an alarming extent, the amount of so-called poetry that is inflicted upon the reading public is immense. The literary and news journals teem with verse—some good, much very indifferent, and an abundance exceedingly bad—and at frequent intervals the supply is swelled by a new volume, (generally of old poems, reprinted,) contributed by some one more or less known to fame. The mania for writing is probably more wide-spread in this country than in any other, and it is not surprising, perhaps, that, in their desire to get ahead on the road to literary repute, many find prose a very slow vehicle, and so mount Pegasus, and go off on a "galloping rhyme."

Rhyming is as much a disease as is dyspepsia, and may be pretty certainly set down as dangerous just in the ratio that it is chronic or acute. An occasional half-dozen stanzas, even if absolutely void of merit, may not harm the writer, but an injudicious draft upon the resources of song will work injury to even the most gifted. The chronic rhymester fancies he lives in a world of rhythm, and that nothing is well done which is not ended with a "jingle." He seizes upon every available opportunity to invoke the muse. A marriage is gladly welcomed by him as a fit subject for song; and a death is greedily appropriated to the same end. And of all execrable "poetry," that termed "obituary" is most to be execrated. Now and then one who really possesses the "divine afflatus" lifts up his voice "In Memoriam" with a touching, beautiful tenderness that thrills the heart, and dims the eye with tears. But it is rarely that mourning is effectively done in verse. There are few hearts that can sing, while they weep, with such sweetness as Tennyson breathed when he sang—

"'Tis better to have loved and lost
Than never to have loved at all."

Though the saddest plaints are those the muse gives voice to, they are generally the heart's fancies, and not really and truly the heart's regrets.

He who has the disease of rhyme only in its acute form, finds it influenced, like rheumatism, by the weather or other outside circumstances. From certain evidences—not a few of which, in the shape of rejected manuscripts, have met their fate at our hands—we conclude that acute attacks come oftenest in the season of the falling leaf. Autumn is wonderfully fruitful of effusions that treat glowingly of the "golden corn," the "ripened grain," the "leafless boughs," the "gorgeous dyes," the "purple flush," &c. We hardly dare state just how many of this character have come to the Rural sanctum, during the last month, desiring, as we do, to preserve our reputation for veracity; but the number is not small. Our readers would doubtless be gratified by the perusal of some of them, but space is too precious to permit of their insertion. A specimen or two, however, we are tempted to give. This treats of the shortening days:

"The sun, that in summer gave light till eight,
Now sinks in the west at five,
On other lands to shed its rays,
On other shores to rise."

It will be readily perceived that the rhyme here is rather peculiar, and not altogether perfect. But it is a tolerable sample of much of Autumn "poetry." Here is the climacteric of a lengthy effort, upon which the reader may pass judgment for himself:

"The cold November winds are near;
Jack Frost has visited us thrice;
Telling us in truthful tones
That summer's passed at last."

Note the exactness with which it speaks of Jack Frost's visitations. All poetical license justly scorning, the poet explicitly declares the number—"thrice." The word doesn't quite rhyme with "last," to be sure, but perfect truthfulness should never give way to rhyme.

Love—alas! that such is the lamentable fact—seems highly provocative of the acute disease. Fortunate, indeed, is the happy lover who does not see sonnets in his dear one's eyes, songs in her silken hair, and odes without number in her every queenly grace. The probabilities are that he will attain to his most cherished hopes, will live long and happily, and will die blessed by the entire brotherhood of editors! Seriously, is not a man to be commiserated who has to read numerous weak dilutions of rhyme like this from a love-lorn tale, entitled "My Susan:"

"My Susan is a queenly girl,
The queenliest girl I ever knew;
And my brain, Susan, 's in a whirl,
For, oh! I love my Susan true!"

Falling in love does not always make one a poet; neither does a disappointment in love, which, we suppose, is the falling out of it, invariably have that effect. Probably very many disappointed, rhyming swains will cite Byron as a notable instance on their side of the question. But we suspect that Byron had some little fitness for poesy aside from what his early heart experience afforded.

A new volume of poems—"Voices of the Border"—was reviewed at length in a late issue of the Utica Herald. One paragraph by the reviewer, relative to rhyming in the abstract, is so very pertinent that we copy it for the benefit of "whom it may concern:"

Almost anybody can learn to construct verses. The requirements are, ordinary intelligence, a tolerable ear for rhythmic movement, the superficial reading of (say) Griswold's "Poets and Poetry of America," and a little practice in versification. There are probably several hundreds of young persons in the country capable of turning off an unlimited amount of rhymes on almost any subject. This merely technical skill does not prove particularly detrimental to its possessor, provided he neither employs too much of his time in its practice, nor flatters himself into the foolish notion that his verses are poetry because they are rhymed, and that the mechanical ability to make them constitutes genius. If the young person in his leisure hours grinds away on his rhyming mill and keeps the fact to himself, all will be well. He may even acquire thereby a certain polish of style and power of expression. But he will soon tire of the monotonous crank and learn to estimate what he produces at its real value. But let him show some of his verses to a friend, who is indiscreet enough to pronounce them fine and excellent, and he is at once elevated in his own estimation to a level vastly above where he belongs. Forthwith assuming an alliterative *nom de plume*, he dispatches one of his gems to the favorite newspaper, with the importunate request that it appear in the next issue. If the indulgent editor comply and the poetaster once sees himself in print, it is all over with him. His machine is set in motion on all conceivable occasions, and the ultimate result is likely to be a volume of verses like these "Voices of the Border." Given, years ago, the young man of lively fancy and technical skill in rhyming, the indiscreet friend, and the indulgent editor, and behold the consequences in three hundred and sixty pages of unmistakable machine poetry. It is a pity that well meaning persons should mistake a little technical skill for poetic genius. But the error is committed so often that it becomes necessary sometimes to take such notice of it as, if any, it deserves.

THE HOUSE.

Let us understand that a house should bear witness in all its economy that human culture is the end to which it was built and garnished. It stands there under the sun and moon to ends analogous and not less noble than theirs. It is not for festivity; it is not for sleep; but the pine and the oak shall gladly descend from the mountains to uphold the roof of men as faithful and necessary as themselves; to be the shelter always open to the Good and True; a hall which shines with sincerity, brows ever tranquil, and a demeanor impossible to disconcert; whose inmates know what they want; who do not ask your house how theirs should be kept. They have arms, they cannot be kept for trifles. The diet of the house does not create its order, but knowledge, character, action absorb so much life, and yield so much entertainment, that the refectory has ceased to be curiously studied. With a change of aim has followed a change of the whole scale by which men and things are wont to be measured. Wealth and poverty are seen for what they are. It begins to be seen that the poor are only those who feel poor, and poverty consists in feeling poor.—*Emerson.*

FRIVOLITIES.

"Hello, Bill lend me five dollars!" "You're mistaken in the man, sir, I'm not a five dollar Bill."

"How do you mix your colors?" said a connoisseur to a great artist. "With brains, sir!" was the reply.

There is a story told of an Indian, who having seen a gentleman with a wig and spectacles exclaimed in amazement. "Him two scalp, four eyes, by golly!"

Is "chaff" the more reprehensible in old or in young people? In young people, certainly, because although it's bad-in-age, it's most unquestionably worse in youth.

A good sort of a man in Maine was recently asked to subscribe for a chandelier for the church. "Now," said he, "what's the use of a chandelier? After you get it you can't get any one to play on it."

The great objection to smart children is, that when they commence having whiskers they leave off having brains. By forcing children, you get so much into their heads that they become cracked in order to hold it.

"Don't be afther making fun of the bird," said a newly-imported Hibernian to a lad whom he discovered annoying a land terrapin with a bull-rush, "how do you know but he has blessed fine feathers under his overcoat."

The bulletins of fashion state that "some of the ladies now wear long ribbons on their bonnets, to the ends of which tiny bells are attached." This is doubtless to notify their admirers that they have no objection to a *ring*.

DE PROFUNDIS.

I cannot say with willing heart
"Thy will be done."
I feel Thy rod, its bitter smart,
And all alone
I wander on thro' weary way
And blackest night,
Without one star with cheering ray
To show the light.

Thou bendest my proud will to Thine,
With firm decree
Thou claimest all that I called mine.
Oh, God! I flee
In terror from Thy angry face,
With sighs and fears;
I clasp *them* in my close embrace,
With groans and tears!

Not all the love that Thou didst give
When Thou gav'st *these*,
Can cause my dying hopes to live,
Or pangs to cease.
Thou dashest down the cup of bliss
That I had grasped,
Thou showest me the emptiness
Of what I clasped!

Oh Lord! such unavailing strife
And mortal woe
Must take this weary, weary life,
Or make me go
Straight to Thine agonizing Cross,
And at Thy feet
Find, while I weep my bitter loss,
Thy mercy-seat.

Rochester, N. Y., Oct., 1867. Ella D.

HEAVEN IN THE HEART.

We listened, not long since, to an able sermon preached by an eminent divine, in the course of which he said, with a low-voiced emphasis that thrilled the hearts of all present, "hell begins here." As opposites are most naturally suggested to the mind, our thought at once appended to his remark—"and so, also, does heaven begin here."

We all hear, at some time or times in our lives, faint preludes, as it were, of the sweet and beautiful song of the Redeemed; into our souls there comes, now and then, soft echoes of the holy music of heaven. These are the beginnings of that purer life which is to come, and in them we taste somewhat of the gladness that is without alloy, with which "the pure in heart" are to be made glad when they "shall see God." We may have, always, a little of heaven in our hearts. We *do* have, indeed, oftener than we think. It comes in through a good deed done, a generous impulse yielded to, or a noble resolve faithfully kept. But it benefits us most, and others altogether, when it is breathed out in genial words of encouragement, in pleasant smiles, and in the atmosphere of a sunny manner.

Good-nature will be one of the marked features of heaven, else we greatly mistake And good-nature here will let about as much of heaven into the heart as anything else we know. This isn't, on the whole, a very good-natured world. It might be a great deal more bright and cheerful than it is. But we who make it up are directly chargeable for any deficiencies in this respect. Our kindly ways are used too much as we use our best clothing—only on special occasions. We ought to wear them constantly. They will not become old and threadbare, and lose beauty. On the contrary, they will impart a charm to the person which is ever fresh and attractive.

In how many hearts has hell really begun, that might feel heaven's warmth and cheer, if they would! They strive, seemingly, continually after bitter and unwholesome things, when the sweet and palatable are right within their reach. They go hungry and longing for love, and trust, and happiness, when these are all around them, and are partaken of by others no more fortunately circumstanced than they. Whose is the fault? All the love and the hope, the goodness, the richness and beauty of earth are free, and of them there is no stint. They belong to him that has not shared them, and is athirst, as much, aye, more than to him who has appreciated them, and who has received them into his life until it is full thereof. In them all are the foretastes of celestial joy, and through them all cometh the blessing down which brings heaven into the heart.

Swearing.—Swearing is the fit expression of human rage, and the most exact interpreter of its real meaning. He who utters the fearful word of damnation against his fellow man, is giving vent to a feeling which, had he the power, would really consign him to hell. Anger is thus not only murder, but murder of the worst kind; it would not only kill the body, but would cast both soul and body into hell. Swearer, see what your oath means! Angry men, see what your anger means!

Pithy and True.—Elder Swan used to say that if the doctrine of universal salvation be true, then the Bible ought to read: "Wide is the gate and broad is the way that leads to heaven, and everybody goes there; strait is the gate and narrow is the way that leads to hell, and you can't find it if you try."

No man knows less of pleasure than he who habitually seeks it. For him there is but a step between novelty and satiety, and the charm of the former is utterly destroyed by the intemperate haste with which he plunged into the latter.

God certainly hears what we speak; but we many times do not hear what he speaks, though he speaks peace to us. God always hears the prayer of faith, and answers it, but we do not always hear what that answer is.

The Traveler.

LOUNGINGS.

BY OLOFFE THE DREAMER.

IV.--THREE DAYS.

YESTERDAY was the beginning of a week in the shining quiet of early autumn, with the change—in outwardness at least—of toil to rest, of business to worship. From the snugness of my room at the hotel—from the shade and the stillness of Madison Square, where I went in the morning—from the thank-heartedness of my stroll in the dusk and the twilight—I saw the Sabbath everywhere. There was no crowding of omnibuses, carts, expresses, and all the paraphernalia of the week's Broadway—they were resting somewhere—only the rattling backward and forward of the carriages and coaches, filled with broadcloth or satin, made up the day. And a little aside from the Long Way, swiftly borne by the wheels or sweeping silken trains on the smooth walks, the pride of the Avenues glitteringly displayed its wealth of jewels and dress.

Away up Broadway, near one or two of the immense dry goods establishments, is Grace Church, where each Lord's Day so many gather to kneel on crimson cushions amid the cloud of prayer and praise which rises to the Mercy Seat of Heaven. The Omniscient Father, who looks into each heart as it lies open before Him, and who judges with no human finiteness, only knows how sincere or meaningless the spirits here unite in petition or thanksgiving, or in the burdened utterances—the bitter, earnest cries, "O LAMB of GOD who takest away the sin of the world, grant us Thy peace!"

"Behold," said the sonorous voice of the preacher yesterday, "we count them happy which endure!" And the rings of sound rolled up to the vaulted roof which echoed in faintness, "happy which endure." The Church was heavily draped for its dead rector, and the afternoon sunshine peeped dimly through the stained windows, seeming to blend its life with the hushing anthems of the choir. And when the sermon was done, the clear-voiced tenor led the melody of the hymned music:

"While Thee I seek, Protecting Power,
Be my vain wishes stilled;
And may this consecrated hour
With better hopes be filled,"—

and we passed out with the blessing of the benediction, under the shadow of the porch, into the ripe autumn day, so fast slipping away.

I have been this afternoon to see Brooklyn play base-ball better than Philadelphia, and now I am taking my last glimpses of New York—through the windows of the dimly lighted street car, as it growls up Fourth Avenue. I have seen the Metropolis in my own way, following my own nose and my own counsel, and now I am saying "good-bye." The brightly shining stores stare fixedly, but condescend to no nod of recognition or farewell, and I cannot help thinking that in this great city, filled with so much ambitiousness for Number One, it is not the avenues nor the cross streets, but the out-of-the way corners which are hidden in their own stillheartedness, that nourish the beauty and the purity which make the soul of New York, and which "shall be Mine when I make up My jewels."

—Grumbling through the long tunnel—flying over the winding track as we follow the monstrous dazzling eye, hooded in snort and swiftness—or slow moving on some great boat, car and all, while the moonlight glistens along the shrouded fields and woods, or on the murmuring water—make up the journey of the night, and while one is hardly conscious whether the noise heard is the train groaning or some companion snoring, a gentle nudge wakes him broadly to hear a "Most there, Sir."

One of the travelers and myself about sunrise go out for a walk around this pleasant city of PROVIDENCE. A steep hill, which strangely enough we find easier in ascent than in descent, brings us in sight of old "Brown," with its terribly uninteresting exteriors, and yet which fills aspiring youth with a vast deal of knowledge-stuffing through each four years, bettering them for entering the lists in the world's great fierce fights. There is so much to be achieved that is grand and heroic, so much ambition and aspiration, that the aims and dreams which make up the life of College become absorbed in what is without and beyond. Scattered over the broad world is the great brotherhood of scholars, doing GOD's errands, and with just as earnest fulfillment, side by side with those who sweat in the furrow, and who feed the furnace fire, like the coral insects, building up with their bones the great temples of civilization. Let them never desert the right or the truth; for, as GEORGE ELIOT tells us, "there is seldom any wrong doing which does not carry along with it some downfall of blindly-climbing hopes, some hard entail of suffering, some tragic mark of kinship in the one brief ripen, to the far-stretching life which went before, and to the life which is to come after."

Along one of the shaded streets of the old city, for a distance sufficiently pleasant not to be tiresome, and I find one or two or so, waiting with a welcome for the chronicler of these Loungings. A goodly amount of talk, in jest and earnest, made up of suggestion, description and story, and then two of us go out for a drive.

—Slowly up one of the high hills which Providence delights in,—then a little more briskly along the winding road beyond, fringed with overhanging boughs, as yet unchanged by the mellowness of later fall. Here and there we catch a glimpse of the Seekouk shimmering in the hazy sunlight,—now we are quietly lingering in a silent city of marbled houses, so eloquently reminding that

"—— earth is only
The vestibule of palaces whose courts we never win."

Now, we are on the long way close by the river, and again we have gained the height by the Dexter Asylum, and stop a moment or two to overlook the city as it seems robing itself in shadow and smoke, while daylight is dimming into dusk, and one by one tiny points of light begin to pierce the mist, and—then homeward."

THE EAGLE'S NEST.

YOUNG readers will be interested in our illustration, which really needs no description.

In general all eagles are found in the mountainous and ill-peopled countries, and breed among the loftiest cliffs. They choose those places which are remotest from man, upon whose possessions they but seldom make their depredations, being contented rather to follow the wild game in the forest, than to risk their safety to satisfy their hunger. Of all animals the eagle flies highest, and on this account he was called by the ancients the Bird of Jove.

The nest of the eagle is usually built in the most inaccessible cliff of the rock, and often shielded from the weather by some jutting crag that hangs over it. Sometimes, however, it is wholly exposed to the winds, as well sideways as above; for the nest is flat, though built with great labor. It is said that the same nest serves the eagle during life; and indeed, the pains bestowed in forming it, seem to argue as much.

Educational.

Written for Moore's Rural New-Yorker.

A CHAPTER FOR TEACHERS.

BY C. A CHURCH.

EVER since I have read the RURAL—and I can hardly remember when my weekly perusals of it began—one column has been kindly and profitably given to Teachers. In it I have found many bits of good advice, and much sound reasoning. I have been waiting patiently, for weeks past, to find more such "bits," and learn something new in the art of school teaching, for, if other men can, a teacher cannot know too much. He cannot understand books, the world and human nature too well, and I believe that a good understanding of the last is as essential to success in teaching as is a thorough knowledge of the first, if not more. Some of our most learned scholars have proved themselves incapable of teaching, simply because they could read Shakspeare, "The Bells," and "Hiawatha" better than they could their students. By a few, such men would be called first-class educators, and for some pupils they would be; but the mass of their schools would neither love nor respect them. When a teacher gains the respect of his scholars he gains their love; and when he has their love he has all they can give him towards his success, and if he fails the blame must rest upon his own shoulders.

Pleasant words are a teacher's best and truest weapons; while threats stir up among his school a mutinous and unfriendly feeling that weeks and months of after-kindness cannot erase. He must learn to forgive and forget. If it is necessary, punish—then forget it. Lay nothing up against a child because he happens, sometimes, to celebrate his boyhood. Children think this world was made for fun, and they to make it. We thought so once; but years have corrected the impression. Remember you were once children and scholars; wore boots that would make a noise, carried jack-knives that wouldn't stay in your pockets; and owned lips that would whisper, hold them as closely as you could! It is natural for a boy to talk and act like one, and human nature is the hardest thing to govern under the sun.

Some teachers instruct as if they deemed all that is required of them is to tell all they know of Arithmetic, Grammar, Reading, &c., and I have known parents who denounced a teacher as not doing his duty, spending his time foolishly, and all that, because he used a few moments each day in talking of Astronomy, Philosophy, History and Government. If a teacher has a duty higher than the mere hearing of recitations, it is to hold conversation with his school upon such subjects as these. Besides instructing, it is one of the best and most powerful stimulants to work that can be employed. It sets the young mind to thinking. The scholar begins to see he is "fearfully and wonderfully made," and that the world in which he lives is a universe of mysteries. I know when I began the study of Philosophy, from books, I went to work with a will I should never have had if I had not previously caught glimpses of philosophical secrets.

Again, give your scholars change. Don't keep them on the same old track week after week and month after month. You, old as you are, would weary of it, and sink down into the kingdom of "I don't care," and become as dull and careless as the little ones you call "lazy" and "sleepy." The sweetest song a maiden ever sung will become, to the ear, worse than devoid of melody from frequent hearings.

But I have already written enough to fill the "Educational" column, yet have not said half I intended to. I shall expect to hear from other teachers.

Jefferson Co., N. Y., 1867.

The above contains some useful hints, which, we trust, will profit those for whom they are intended. We propose to give the Educational Department with greater regularity, hereafter, than has been feasible during a few months past, and hope to make it more than ever interesting and valuable. To this end, we solicit communications from Teachers, and others, upon subjects concerning the practical work of Instruction. Let them be brief, and to the point.

MODERN EDUCATION.

EDUCATION should represent the existing state of knowledge. But in America this golden rule is disregarded, especially in the case of the higher establishments. What is termed classical learning abrogates to itself a space that excludes much more important things. It finds means to appropriate, practically, all collegiate honors.

This evil has arisen from the fact that our system was imported from England. It is a remnant of the tone of thought there in the sixteenth century; meritorious and justifiable enough in that day, but obsolete in this.

The vague impression that such pursuits impart a training to the mind has long sustained this inappropriate course. It also finds an excuse in its alleged power of communicating the wisdom of past ages. *The grand depositories of human knowledge are not the ancient but the modern tongues.* Few are the facts worth knowing that are to be exclusively obtained by Latin and Greek; and as to mental discipline, it might be reasonably asked how much a youth will gain by daily translating a little good Greek or Latin into bad English?

So far as a preparation is required for the subsequent struggle of life—for discerning the intentions and meeting the rivalries of competitors—for skill to design movements and carry them out—for clearness of perception into character and motives, and for giving decision to all our actions—so far as these things are concerned, an ingenious man would have no difficulty in maintaining the amusing affirmation that more might be gained by a mastery of the game of chess, than by translating all the Greek and Latin authors in the world.—*J. W. Draper.*

Various Topics.

ARE OUR FEET PROPERLY CLOTHED.

IT is somewhat surprising that, with all our boasted improvements, we have not as yet produced a proper covering for the feet. Barbarous people, if their climate admits, go with bare feet, or wear sandals, covering only the sole of the foot. We, however, encase the whole foot, and a portion of the leg, in a material almost impervious to air and moisture, and generally uncomfortably hard and rigid. The color and polish of our boots are directly calculated to attract the sun's rays; and the enamel on patent leather, and the blacking on ordinary calf-skin, tend to harden and solidify the substance, closing the pores and making air-tight cases for a portion of the body which exudes more perspiration than any other, and is subjected to greater strain. Our boots in summer parboil our feet in a warm bath, and in winter freeze them in an icy envelope. It is doubtful if wet feet are, in themselves, very conducive to disease, some medical men to the contrary notwithstanding; but cramped confinement of the feet, in an icy cold envelope, generated by perspiration and chilled by the external atmosphere, thus shutting the imprisoned feet almost air-tight, is as unhealthy as it is uncomfortable.

For hot weather there is hardly any shoe so agreeable as that introduced within the past three or four years, known as the army shoe, and extensively used by base-ball players. It is of a heavy canvas and unblacked leather. It is cool and remarkably easy to the feet. The texture of the canvas allows the escape of the perspiration, and the color of the shoe does not attract the heat of the sun. It would seem that the plan of covering other portions of our bodies with material pervious to air might advantageously be extended to our feet. There is no natural reason why our feet should be so much less sensitive than our hands. They become indurated and deprived of their natural activity by long, close confinement. The people of warm climates, who use their toes as we do our fingers, and the bare-footed school boy, who picks up and throws pebbles with his feet, show that the foot of the civilized adult in our climate is a much abused member. A more flexible and porous material for our boots and shoes might save us from many of those terrible annoyances, which, in the form of corns and bunions, make our pilgrimage one of pain. —*Scientific American.*

SOMETHING WORTH KNOWING.

PEOPLE in general suppose that, by extracting and insulating what they conceive to be the nutritious principles of any alimentary substance, they are able with greater certainty and effect to nourish the body of the sick and delicate. Thus we continually hear of strong beef-tea, pure arrow-root jelly, and the like, prepared with great care for such persons. But it will surprise many to hear that a dog, fed on the strongest beef-tea alone, rapidly emaciates, and dies within a short period; and that precisely the same consequence would ensue on continuing the strongest man on the same food. It is also a fact that a dog fed on fine white bread (usually considered by far the most nutritive kind of bread) and water, both at discretion, does not live beyond the fiftieth day, and a rabbit or guinea pig, fed on the best wheat alone, dies of the symptoms of starvation, commonly within a fortnight, and sometimes much sooner. The same effects follow if they are fed on oats or barley, singly. An ass fed with rice boiled in water does not survive above a fortnight. The reason of all this is, that diversity of food, and a certain bulk, are essential to nutrition. It follows that strong soup, beef-tea, arrow-root, animal jellies, and such articles of food, should at all times be taken with some alimentary substance, and particularly with bread.

A NEW RAILROAD INVENTION.—A car carrying its own track, and designed for use on common roads or the streets of a city, has been brought out in Philadelphia. In this vehicle the car moves the wheels instead of the wheels moving the car, and the wheels do not touch the ground at all. There are six pairs of wheels, and each pair has a broad flat foot attached. These "feet" rest on the ground and bear up the wheels, while two rails under the body of the car are made to roll along the upper surface of the tire as if it were passing over so many pulleys or friction rollers. The feet and wheels are all connected by an endless chain, and as fast as the body of the car passes beyond one of these feet it is lifted from the ground and made to travel along to the front of the car, where it drops on the road again, and the whole is thus kept in continuous motion. The wheel track in fact "walks" along the road while the car itself rolls along over the wheels. Whether this invention will prove of any utility, remains to be seen; but steam locomotion may in time become common.

Reading for the Young.

LITTLE PLAID SUN-BONNET.

LITTLE plaid sun-bonnet, what do you hide,
Down in the grass by the sunny wall side?
Any short ringlets half out of curl?
Any round forehead as pure as a pearl?
Any blue eyes with a laugh bubbling over?
Any red mouth closing on a red clover?
Is it the wind makes you dance up and down?
Or is it a fairy head under your crown?

O, Earth is bright, by the glad summer kissed!
Millions of roses might scarcely be missed;
Acres of buttercups, growing so gay,
Cause not a sigh when their gold drops away,
Yet to my heart how your charms were destroyed,
All your fresh meadows how wintry and void,
Earth, should you lose from your beauty and pride,
Just what a little plaid bonnet can hide.

WHAT THE RILLS SAID.

I HAVE just been watching the little rills jumping and skipping merrily along, and it made me think of the talk a good doctor once had with some of them as he was traveling over the Alleghany Mountains.

"What was it?"

Well, he asked them where they were going so fast.

"Oh," they said, "just down the mountain."

"And what are you going to do as you go down the mountain?" he asked.

"O, we shall make friends with other little rills, and grow bigger," said they.

"And what will you do when you grow bigger?"

"O, we shall turn saw-mills and grist-mills; and when we get down through all the rocks on the plains, we shall set some great iron factories and cotton-mills in motion."

"And what will you do then?"

"Then? Why, we shall make the Alleghany and Monongahela rivers, and when we are big enough we shall make the great Ohio."

"And what then?"

"O, then we shall take upon our backs great rafts and steamboats, and beautiful ships, and help to build up beautiful villages and cities."

"And what then?"

"What then? Why, we shall unite our forces—for we do not mean to live by ourselves—with the great Missouri and Mississippi, and help them carry a thousand ships to the ocean."

"What! are you going to do this, you little rills?"

"Yes, sir, we are; and if you don't believe us, we can't stop to convince you of it, for we are in a hurry," and off they ran on a jump.

If the little rills are going to do so much, what will not the children do, the boys and girls who are growing bigger and stronger every day, and will by-and-by be felt for good or evil in this world. Some who are bright and sparkling now will, I am afraid, run into the first sunny and sunny spot, and there stay until they dry up. An easy, selfish life, blessing nobody, at last shrinks to nothing. Others who are promising now, will, I am afraid, by-and-by be diverted from the right way, and turn off into dark channels, where they will be lost; and others, a great number of our dear boys and girls, I pray God, may grow up strong and good, to unite their forces with all good and noble works, to bless the places where they live, and make the nation better for their having lived in it.—*Selected.*

EVIL COMPANY.

THE following beautiful allegory is translated from the German.

Tophronius, a wise teacher, would not suffer even his own grown-up sons and daughters to associate with those whose conduct was not pure and upright.

"Dear father," said the gentle Eulalia to him one day, when he forbade her, in company with her brother, to visit the volatile Lucinda, "dear father, you must think us very childish, if you imagine that we should be exposed to danger by it."

The father took in silence a dead coal from the hearth, and reached it to his daughter. "It will not burn you, my child; take it."

Eulalia did so; and behold! her delicate white hand was soiled and blackened, and as it chanced her white dress also.

"We cannot be too careful in handling coals," said Eulalia, in vexation.

"Yes, truly," said the father; "you see, my child that coals, even if they do not burn, blacken. So it is with the company of the vicious."

STRIKE THE KNOT.

STRIKE the knot! said a gentleman one day to his son, who, tired and weary, was leaning on his axe over a log which he had in vain been trying to cleave. Then, looking at the log, the gentleman saw how the boy had hacked and chipped all around the knot without hitting it. Taking the axe, he struck a few sharp blows on the knot, and split the log without difficulty. Smiling, he returned the axe to his son, saying: "Always strike the knot!" That was good advice. It is a capital maxim to follow when you are in trouble. Have you a hard sum to do at school? Have you got to face difficulty? Strike the knot! Look your trouble in the eye, as the bold lion hunter looks in the face of the lion. Never shrink from a painful duty, but step right up and do it. Yes, strike the knot, boys and girls, and you will always conquer your difficulties. Strike the knot, and crack it goes.

WERE repining to begin only where thanksgiving to God for his mercies should end, the most afflicted of mankind would find life too short for complaint.

NEWS DEPARTMENT.

ROCHESTER, N. Y., NOVEMBER 30, 1867.

NEWS OF THE WEEK.

New York State Items.

COMPTROLLER HILLHOUSE declines to draw his warrant upon the Treasurer for further payment of members of the Constitutional Convention, claiming that the law which provided for the Convention required it to submit the revised Constitution to the people prior to the election, and he cannot, therefore, recognize the adjourned session as authorized by law. His action will probably make the dignified body more prompt in its work. A proposition from the Commercial Bank of Albany, to advance moneys for payment, on its own responsibility, was at first accepted by the Convention, but afterwards re-considered and tabled.

The Constitutional Convention has received a communication from the Attorney General, in answer to a resolution calling upon him to commence legal proceedings to vacate certain alleged fraudulent canal contracts, in which he says he is convinced that no useful end could be served by such proceedings, so long as the Contracting Board claim, as it does, that contracts were properly let. He recommends that the entire matter be referred to the Legislature.

The Convention had a lengthy discussion on the 21st inst., on the question of prohibiting the Legislature from passing local or special laws regulating the sale of spiritual liquors, ales and beers. No result was reached. Much time has been spent in considering the report of the Judiciary Committee.

Considerable excitement prevailed in New Rochelle last week, at the absence of Miss Jane Smith, daughter of a wealthy resident, but it has been ascertained that the young lady eloped with a young music teacher, and the couple are now in Boston.

J. R. Place & Co., grocers, New York city, suspended last week, with liabilities said to exceed a million of dollars.

The rebel Colonel Moseby visited the gold room in New York on the 19th inst., and was invited by the President to the platform. Many members objected, and for a time great excitement prevailed. The President was sustained.

A man named Spencer, and his wife, who reside in Panesboro, N. J., appear to be of the highest respectability, and are worth, it is said, over $200,000, were arrested in New York on charges of being the chiefs of a gang of counterfeiters who have recently put the spurious 7-30 bonds on the market. Mrs. Spencer paid cash down $40,000 as bail for herself and husband on the examination. Several other persons are supposed to be engaged with them. The Panesboro establishment was in operation as long ago as July, 1865, and it is estimated that the parties engaged in the business have netted upwards of $1,000,000.

Senator Humphrey of Wyoming, who was arrested on charge of receiving a bribe to influence his vote, has been vindicated, as no indictment could be found against him.

From Washington.

CONGRESS assembled in extra session on Wednesday, the 20th inst. There is a large attendance of members. Messrs. Woodward of Pennsylvania, and Cary of Ohio, members elect, took the required oath on the 21st inst. Mr. James Brooks objected to administering the oath to any of the Tennessee delegation, as two or more were guilty of treason, and the State had not a Republican form of Government. Much discussion ensued. All the Tennessee members, except Mr. Butler, were finally sworn in; as were also the delegates from Montana and Washington Territories.

Mr. Robinson of New York, submitted as a question of privilege a resolution charging Chas. F. Adams, United States Minister to Great Britain, with neglect of duty, and instructing the Committee on Foreign Affairs to inquire into such charges.

Mr. Ingersoll of Illinois, has introduced a bill to repeal the law authorizing $4,000,000 per month of currency to be retired, and prohibiting any further reduction of currency by the Secretary of the Treasury.

There is much diversity of sentiment among the radical members on the financial question. Senator Sherman is desirous of seeing the national debt liquidated in coin.

Gen. Mower's recent general removals of civil officers in Louisiana meet with the disapproval of the President, who will probably issue an order relieving him from command of any kind in the 5th military district, and assign him to duty elsewhere.

It is generally conceded that Congress will repeal the cotton tax.

The President, it is said, intends in a few days to direct Gen. Grant to cause to be mustered out of service as Major-Generals of Volunteers, Gens. Howard and Gregory, both of the Freedmen's Bureau. Gen. Howard will still hold his position in the regular army, but Gen. Gregory goes out of the service altogether.

Both Gen. Steedman and Montgomery Blair have declined the War Office and Gen. Thomas Ewing of Ohio, is now spoken of. Gen. W. F. Barry will take charge of the proposed artillery school of Fortress Monroe instead of going to California.

Gen. Grant will submit his report to the President in a few days. He estimates the expenses of the War Department for the next fiscal year at $70,000,000, and states that there has been important retrenchment of late in its several bureaus. He says Gen. Sherman is of opinion that a peace with the Indians is firmly established. Though silent in his report regarding the continuance of the Freedmen's Bureau after it expires by law next summer, he indorses all of the military commanders who are enforcing the reconstruction act.

From the South.

THE article on the elective franchise, finally adopted by the Alabama Reconstruction Convention as a part of the new Constitution, grants suffrage to every male person born in the United States, and every naturalized male person twenty-one years old; makes it the duty of the General Assembly to provide for the registration of all electors; and except from election privileges certain classes, the more prominent being those disfranchised by the proposed Constitutional amendment known as the "14th article," and the act of Congress passed March 2d, 1867, and such persons as have refused to aid the plan of reconstruction proposed by Congress and accept the political equality of all men before the law, the General Assembly retaining power to remove the disabilities incurred under this last clause.

Returns from Florida show that the Convention has been carried by a decided majority of the registered voters. Nearly all the blacks voted, and but few whites. A large number of negroes were elected to the Convention. Not one vote is know to have been cast against the Convention in South Carolina. North Carolina has probably given 25,000 majority for the Convention.

Gen. Mower, in command of the Fifth Military District, has issued an order removing, as impediments to reconstruction, in Louisiana, Albert Voorhis, Lt.-Gov., H. H. Hardy, Sec'y of State, Adam Griffon, State Treasurer, Hyppolite Peralti, Auditor of Public Accounts, R. M. Lasher, Superintendent of Public Education, and Henry Bensal, State Tax Collector in the 4th district.

Jefferson Davis arrived in Richmond on the 22d inst., on the steamer from New York, and is stopping at the house of his counsel, Rob't Ould.

The Tennessee Legislature has propositions before it calling for State aid for railroads to the amount of $3,500,000.

Latest European News.

SOME fresh irruptions have lately been made across the Papal frontier by small bands of Garibaldians. They were promptly met by the Pontifical troops, and in all cases were speedily suppressed. The Italian Parliament convenes on the 5th proximo. Baron Ratazzi will be made President of the popular branch. The Prime Minister, Menabrea, has issued another note, it is said, wherein the invasion of Papal territory by France is severely denounced. It is reported that Garibuldi is lying seriously ill in prison at Varignano.

Dispatches announcing the safety of Dr. Livingstone, the African explorer, have been received at London. In April last he was exploring the wastes of Africa, hundreds of miles from the sea.

Cretan official accounts ridicule the efforts of Ali Pasha to turn the islanders from their inflexible determination to become part of the Kingdom of Greece. The war is being resumed with increased violence, and will not close until after the annihilation of Turkish rule. Great sensation has been produced in Crete by a spirited manifesto of an American lady, the wife of Dr. Hill, the American missionary and English Legation chaplain at Athens, addressed to a certain Elizabeth Kantosaki, a Christian woman, who is employed as a spy by the Turks. Mrs. Hill earnestly condemns the efforts of a Christian to betray the cause of Christ and liberty by serving the Sultan of Turkey.

The eruption of Mt. Vesuvius, which commenced with fearful grandness on the 14th inst., continues. The mountain is still sending forth fire from the old and newly formed craters, and the display is magnificent. There are seven streams of lava in full flow.

It is believed that nearly 300 lives were lost by the late colliery explosion at Ferndale, S. Wales.

From the West.

A TERRIBLE accident occurred on the Cincinnati, Hamilton and Dayton Railroad on the 21st inst. A freight and a passenger train collided, with a fearful crash, the cars of the latter being jammed into each other. The ladies' sleeping car was entirely demolished, and four ladies—sisters—were instantly killed. Their names were Harriet, Rebecca, Sarah and Elizabeth Morgan, and they were returning to their home in New Orleans. One gentleman—Charles Jackson of Boston—was killed, and many others badly injured. Fire was communicated by upsetting the stove, and four cars were burned.

The steamer Amanda was burned and sunk near Omaha on the 17th inst., and the steamer Amaranth, which left St. Louis the same day, while racing with the Village Belle, was sunk near Doniphan.

WESTON.—This young man, whose feat of walking from Portland to Chicago in twenty-six days is now the subject of so much interest, stopped over Sunday at Waterloo City, Indiana, 160 miles east of his destination. Doubtless by the time many of our readers will peruse this, he will have won or lost in his race against time.

THE excellent AMERICAN ORGAN, manufactured by S. D. & H. W. Smith, Boston, used at the late Convention, deserves an especial notice, a large double-banked instrument of fourteen stops, whose heavy sub-base notes were distinctly heard above the whole chorus of 350 voices, while in accompanying the recitatives in the oratorios, the effect of the soft stops and tremolo were very striking. We notice that the use of these beautiful instruments is beginning to be appreciated by musical societies in the larger cities.—*Burlington Free Press.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Nov. 26, 1867.

IN this locality there is hardly as much call for money as heretofore. Millers are buying very little wheat in consequence of the low state of the water and the near approach of the close of navigation. From present appearances our banks will be fairly easy for a month to come. A pretty close time may be anticipated about the first of January, and business men should make their arrangements accordingly.

Early last week money matters in New York and Boston tightened up materially, and without any apparent cause. Money was more plenty at the close of the week, but rates were firm at 7 per cent. on call. The Commercial Advertiser of Saturday evening says:—"Within the last two or three days funds have come upon the market as mysteriously as they disappeared early in the week, and the market is consequently relieved so far as respects call loans."

Gold was excited toward the close of the week. On Saturday sales were made as high as 140, but at the close of the New York Board fell back to 139¾.

Government securities have been buoyant for some days, and there is apparently more disposition to buy than to sell. Ten-Forties advanced on Saturday ¼c., in consequence of foreign orders, closing at 101¾. The conversion of Seven-Thirties last week averaged about two millions per day. Total amount converted since Oct. 15th, $44,100,900.

Several heavy failures are reported in New York and Philadelphia.

A Washington dispatch of Saturday evening says the creditors of the ten National Banks which have failed will realize about 70 per cent., and the total loss to the public will be under one million dollars. The circulation will be paid in full.

Senator Wilson, Speaker Colfax and other prominent members of Congress favor the repeal of the cotton tax of 2½ cents. The public generally, we believe, favor the repeal, and it is presumed Congress will take early action on the subject. We trust there may be a general revision of the present tax law, for many of its provisions operate unjustly, and the high tax imposed on some manufactures has led to immense frauds, which the Government thus far has been unable to prevent. The taxes should be made fair and equal, and their collection most rigidly enforced.

In financial circles the great question is, "What will Congress do?" Important financial measures will be introduced early in December. A decided effort will be made to stop the present contraction of four millions per month. It is understood that Mr. McCulloch will "make a strong argument in favor of continuing the contraction of the currency, according to the terms of the present law."

In most descriptions of merchandise values have been depressed during the week. Wool is, however, an exception. Dry Goods are lower, though sales are larger.

WOOL.—There is an improved feeling in the eastern wool market. The New York Journal of Commerce of Saturday notices thus:—"There is considerable inquiry from manufacturers, and for larger lots than they have been in the habit of purchasing for several months. Prices can hardly be quoted higher, though it is comparatively easy to move lots at prices buyers would not have touched a week ago."

The sales in Boston last week were unusually large, footing up 1,075,000 lbs., at a range of 27@55c. for fleece, and 25@45c. for pulled. The Boston Bulletin of Saturday says:—"Manufacturers in general are very short of material; they have had their stocks worked close up, and have now come to the point where they must either come in for supplies or suspend operations." The sales of the week were entirely to manufacturers, which is a favorable indication of the future of the market. The demand for fine wool is now on the increase.

BREADSTUFFS.—The eastern market for wheat and flour is dull and drooping. Flour declined in New York on Friday from 10 to 20c. per bbl., and on Saturday there was a further decline of 20@30c. per bbl. The receipts of flour are large at Boston, and the high grades are quoted "dull and lower."

The receipts of wheat and flour at the western shipping ports are large. At the various lake ports some 5,000,000 bushels of wheat are in store. Prices just now relatively higher at the West than at the East.

PORK.—Early in the week a fair amount of pork was received in this city, but the warm weather the last of the week checked the business materially. Prices ranged from 7¼ to 8¾c. There will be little done until cooler weather.

Live hogs sold in Chicago at the close of the week at $4,62½@6,25 for light stock to extra lots. Dressed hogs were taken freely at $6,80@7. The receipts were light in consequence of the mild weather.

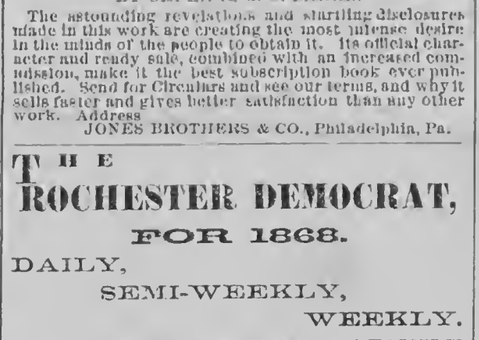
NOVELTY AND CHAMPION CLOTHES WRINGER.



Among the numerous awards given to these Wringers in 1867, were the

HIGHEST PREMIUMS BY THE GREAT

AMERICAN INSTITUTE,

AND

New England Union Fairs.

Although these Wringers have been in the market only about *TWO* years, their sale far exceeds that of all other Wringers combined. Over

300,000

dollars worth have been sold in the past year, which shows conclusively how well they are appreciated.

A Gold Medal

(the only one *EVER* given for a Wringer) was awarded the manufacturers of these Wringers in 1865.

N. B. PHELPS & CO.,
GENERAL AGENTS,
17 Cortland Street, New York.

Sold by Dealers in Hardware, House-Furnishing Goods and General Merchandise everywhere.

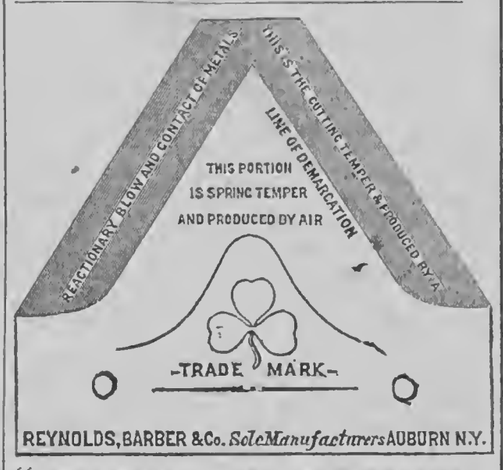
LADIES AND GENTLEMEN EMPLOYED. Picture business. Very profitable. No risk. Seventeen specimen Pictures and Catalogue sent for 15cts. postage. MANSON LANG, 91 Columbia St., New York City.



REYNOLDS, BARBER & Co. *Sole Manufacturers* AUBURN N.Y.

"THE REYNOLDS" MOWER AND REAPER KNIVES, manufactured exclusively by us, under *Reynolds' Patents for tempering steel "without the aid of any liquid,"* received the only award at the great *"National Implement Trial,"* held at Auburn in 1866. They possess

The Following Superior Qualities.

1st. They are made with a fine cutlery temper at the edges.
2d. They hold only a *spring temper* in the center, and at the heel.
3d. They are warranted *perfectly uniform*, every knife being exactly alike in temper.
4th. We warrant they *can be ground from eight to ten times without losing their cutting edge.*
5th. Finally, *we will warrant them to cut from 40 to 50 acres of grain or grass without once being ground.*

We are the sole manufacturers of these Knives in the United States and Canadas. Each Knife hereafter will bear our Clover Leaf Trade Mark, as shown in above cut.

Read what the National Committee says of our sections:

"Desirous of investigating reaper and mower sections as thoroughly as possible, we collected the sections of different makers to as great an extent as we were able, and subjected them to a series of careful experiments. We found no fractures in any of the sections manufactured by the Messrs. Reynolds of Auburn, but we detected them in about 10 per cent. of those made by other manufacturers. We caused nearly 1-16th of an inch to be successively ground off from the edge of each of the samples, examining carefully the temper of the edge after each grinding. The sections of Mr. Reynolds retained their temper perfectly for ten successive grindings. None of the others showed as good a temper after the third grinding; some of them were so poor that after the third grinding the edge could be cut off with an ordinary pocket knife.

"Having thus ascertained the superiority of these sections, we were desirous of seeing the processes of their manufacture, and on making known our wishes, the Messrs. Reynolds were kind enough to show us the whole of their works, and we confess to a feeling of great surprise on seeing their sections so perfectly tempered without the agency of any liquid, by percussion, reaction and cold air alone. We saw over a thousand tempered and ground, not one of which was cracked, or which exhibited any traces of flaw whatever. We believe this process will greatly enhance the efficiency of our reaping and mowing machines, and we rejoice that American ingenuity has perfected so valuable an invention. The process, though unpatented at the time of the trial, has since been covered by letters patent.

Special Notices.

BRIGANDS IN SOUTHERN ITALY.

THE Italian Government has not yet succeeded in extirpating brigandage. "Write to your friends," said a bandit chief to an unfortunate traveler, who had just fallen into his hands, "that if they do not send the whole of the ransom money, three thousand ducats, I will restore to them only a part of your body." He was forced to eat a piece of the roasted flesh of another prisoner. He finally got off, however, by paying two hundred ducats, having bribed the brigand who carried the letter to his friends to report that they were really very poor. Speaking of brigands, a most interesting narrative has just been commenced in FRANK LESLIE'S CHIMNEY CORNER, (No. 129,) entitled "Pierce Egan's Adventures Among the Brigands," in which the author details his personal experiences on a pedestrian journey which he had the temerity to attempt from Naples to Rome through a region infested by these vagabonds. A large Gift Plate (28 inches by 22,) on a separate sheet, called "The Monkey's Grip," accompanies every copy of No. 129 of the CHIMNEY CORNER.

WHEATON'S OINTMENT will cure the Itch.
WHEATON'S OINTMENT will cure Salt Rheum.
WHEATON'S OINTMENT cures Old Sores.
WHEATON'S OINTMENT cures all Diseases of the Skin.
Price 50 cents;—by mail 60 cents. All Druggists sell it. WEEKS & POTTER, Boston, Proprietors. 922

925-13t J. R. BRADSTREET & CO., Boston, Mass.

PLAYS, BOOKS, GAMES, PARLOR Fireworks, etc., etc.—Something for everybody. Catalogues will be sent on receipt of a postage stamp, by O. A. ROORBACH, 122 Nassau St., New York. 929-tf

ESTABLISHED 1861.

THE

GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE.
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us now they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the same upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to "*collect on delivery.*"

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ₱ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ₱ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ₱ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ₱ lb.
Gunpowder (Green,) $1.15, best $1.50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 20c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

CLUB ORDER.

Edwards, St. Lawrence Co., N. Y., June 3, 1867.

THE GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street, New York.

DEAR SIRS:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige

Your ob't servant, DAVID C. McKEE.

☞ SEND FOR PARTICULARS. ☜

GORDON'S EMPIRE FEED CUTTER,
FOR HAND AND POWER,
The Best in the World!
MANUFACTURED ONLY AT THE

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.

MANUFACTURERS of Agricultural Machinery and Implements of the best and most approved kinds and patterns in use, embracing

1st Premium "Star" Cotton Gins and Condensers,
1st Premium "Star" Railway & Lever Horse-Powers,
1st Premium "Star" Threshers and Cleaners,

Threshers and Separators, Circular and Drag Saw Mills, Vegetable Cutters, Dog Powers, &c., &c.

Important improvements recently made in our THRESHER AND CLEANER (which we denominate the "*Star*" *Thresher and Cleaner* to distinguish it from all others,) enable us to claim for it, without fear of contradiction, a marked superiority over all others now made, as well in the quality and quantity of the work which it will do as in the perfection of its construction, insuring the durability of the Machine and the ease with which it may be operated.

THE "STAR" RAILWAY HORSE-POWER
AND
THE "STAR" LEVER HORSE-POWER,

Made by this Company, are fully approved by all who have used them, to stand unrivalled in all the qualities which a Horse-Power must possess to give it acceptance to the Farmer—as to durability, economical use of the strength of the Horse (admitting an easy gait of the animal, with—in the Railway Power—a very moderate elevation of the platform,) facility of moving about, setting up, repairing, &c., &c. We solicit a continuance of the patronage hitherto so liberally bestowed.

MR. WM. B. EMERY (SURVIVOR OF EMERY BROTHERS) gives his personal superintendence to all work got out by this Company. His long experience in manufacturing Agricultural Machinery affords the strongest guarantee of the superior character of the machines made by us.

☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge*, on application, and all information cheerfully furnished.

Agents, both Traveling and Local,

are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 924

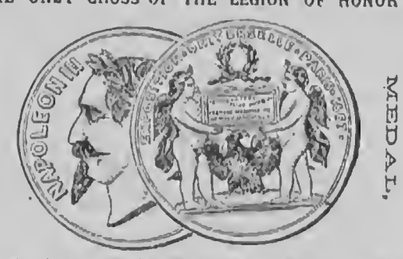
AWARDED OVER EIGHTY-TWO COMPETITORS,
THE HIGHEST PREMIUM,
THE ONLY CROSS OF THE LEGION OF HONOR



given to AMERICAN SEWING MACHINES, por Imperial Decree, published in the "Moniteur Universal" (Official Journal of the French Empire,) Tuesday, 3d July, 1867, in these words:

ELIAS HOWE, JR. { Fabricante de Machines a coudre exposant. Manufacturer of Sewing Machines, Exhibitor.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY*,
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

PRINCE & CO'S.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO is organized under the General Manufacturing Law of the State of New York, with a Capital of $[illegible], and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 933-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

CONTENTMENT.

BY OLIVER WENDELL HOLMES.

"Man wants but little here below."

Little I ask; my wants are few;
I only wish a hut of stone
(A very plain brown stone will do)
That I may call my own;
And close at hand is such a one,
In yonder street, that fronts the sun.

Plain food is quite enough for me;
Three courses are as good as ten;
If Nature can subsist on three,
Thank Heaven for three—Amen!
I always thought cold victuals nice,—
My choice would be Vanilla-ice.

I care not much for gold or land;
Give me a mortgage here and there,
Some good bank stock, some note of hand,
Or trifling railroad share,—
I only ask that Fortune send
A little more than I shall spend.

Honors are silly toys, I know,
And titles are but empty names;
I would perhaps be Plenipo—
But only near St. James;
I'm very sure I should not care
To fill our Gubernator's chair.

Jewels are baubles; 'tis a sin
To care for such unfruitful things—
One good sized diamond in a pin,
Some, not so large, in rings,
A ruby, and a pearl, or so,
Will do for me—I laugh at show.

My dame should dress in cheap attire
(Good, heavy silks are never dear;)
I own, perhaps I might desire
Some shawls of true Cashmere—
Some narrowy crapes of China silk,
Like wrinkled skins on scalded milk.

Wealth's wasteful tricks I will not learn,
Nor ape the girl'ring upstart fool;
Shall not carved tables serve my turn,
But all must be of buhl?
Give grasping pomp its double care—
I ask but one recumbent chair.

Thus humble let me live and die,
Nor long for Midas' golden touch;
If Heaven more generous gifts deny,
I shall not miss them much—
Too grateful for the blessing lent
Of simple tastes and mind content!

The Story Teller.

Written for Moore's Rural New-Yorker.

PAID OFF IN HIS OWN COIN.

BY J. T. YARRINGTON.

"I can scarcely believe, Effie, that what you have told me is true;" and the dark eyes of Tillie Parker filled with tears.

"But it *is* true,—though I am sorry for it on your account, Tillie."

"But who told you? Perhaps it's only the idle tale of some foolish gossip."

"Well, since you will not believe me unless I tell you the whole story, I may as well do so at once, and then I think you'll be convinced. Evening before last, after I had left your house, in company with brother George, I thought I'd run down a few minutes to Anna Perry's, and have a little chat about our examination, which comes off next week. I entered the parlor softly to surprise her, when just one hurried glance convinced me that the young gentleman who sat upon the sofa with Anna was none other than James Stuart himself. Yes, true enough! Anna's head lay back on his shoulder, his arm supporting her, and his mustache—that nice little lady-charmer!—was in pretty close proximity to her lips. Gracious, how I jumped! I waited to see no more; if I didn't make some tall steps then towards home, my name isn't Effie Gardner! Depend upon it Tillie, James Stuart is a contemptible flirt, and I know whereof I affirm, too! Here he has been making love to both you and Anna; but, not being satisfied with that, he has even had the audacity to attempt making love to *me*, too, don't you think! However, I am glad I found him out just as I did, and I intend paying him off in his own coin, yet—see if I don't!" and the features of Effie Gardner flashed a light which foreboded no good to the gentleman in question.

"But what did Anna say when you revealed to her his true character?" asked Tillie.

"Oh!—as it happened, her feelings had not become so interested in him but that she could laugh over it as being a very good joke after all; but she is not the one to approve of any such conduct. On the contrary, Anna wished him all the ill-luck and misfortune imaginable, and said she intended to leave the whole matter in my hands for settlement, and she says she hopes I may learn him a lesson. And now, Tillie, if you will only just let me have my own way, I think I can fix him; keep quiet, and then see the fun. I am sure you cannot love him now, even if such could have been the case before."

"No, indeed; I am only provoked to think that I should have allowed myself to be so deceived by him, or any man, in the first place;" and the merry light danced again in Tillie's eyes, and the old sun-light smile played once more around her half-pouting lips.

Tillie was a great lover of fun, and she promised herself a rich treat from James Stuart's downfall. She knew there were no other two girls in the neighborhood who could better bring about such an eventful undertaking, than the provoking witch, Effie Gardner, who captivated more hearts, and made more conquests, than ever General Grant did, with all his vast army, and Effie's companion, Anna Perry, a great *connoisseur* in human strategy. Beside, Tillie wished for nothing better than to see the one by whom she had been taken in, caught in his own trap, or paid back in his own coin, as Effie termed it. Very fortunately she had entertained only warm feelings of admiration for James Stuart, and most probably the greater part of that admiration was for his superb mustache; (and, by the way, I would advise all young gentlemen who would create a sensation among the belles and beaus, to cultivate a neat little upper-lip fascinator, by all means, but do *not* dye it, *never!*)

"Never mind, Tillie," answered Effie, "you ought to be consoled with the thought that *you* were not the only victim to his coquettish ingenuity, and you know 'misery loves company,'—therefore you are not without this consolation."

"Yes, I am well aware of that; but what would you have me do, Effie,—drop his company?"

"That's it, precisely;—only leave the rest to me, and confide in no person. And, I will say for it, if James Stuart does not get the most effectual dose, in less than six months, that was ever administered to such cases as his, it will not be *our* fault. Will you consent to this proposal, Tillie?"

"That I will, and I hope you will not fail in your undertaking."

"*Fail!*" repeated Effie, drawing herself up proudly. "Indeed, I am not afraid of that. You and Anna shall be revenged, too, Tillie, as well as myself."

While these two scheming girls were planning the downfall of James Stuart Esq., that important individual was stroking his irresistible mustache with the utmost self-complacency, little dreaming that he was the intended victim of three of the most mischievous girls that ever tormented the life of any poor mortal.

A few evenings after the above conversation, James Stuart proceeded to make his usual call upon Anna Perry; but finding her "not at home," he concluded to call upon Tillie that same evening. She received him in a very cool, commonplace manner, and he left at an earlier hour than usual, not exactly satisfied with that evening's adventures. He could not quite understand how it could be that *he* should receive the word "not at home" from two young ladies whom *he* knew were "dead in love with him." Yes, *he* knew there must be some mistake about it, surely, though Miss Anna was absent on one of the evenings she had always set apart for his coming; yet he was certain that some important business must have taken her from home very suddenly, as he had seen her on the street that morning; or, what was more likely, she was in at the time, but the servant had misinformed her as to *who* had called, so Anna had sent down the word "not at home" that she might have no other visitors when *he*, Mr. James Stuart, called. Yes, that must be it! and most probably the dear girl would pass a sleepless night on account of his absence; but he would call again the very next evening and make it all right; and as for Tillie Parker, he *knew* her cold reception was only put on to bring him all the sooner to her feet; but he really hoped that the girl would not think too much of him, as he would be very likely to get himself into a confounded difficulty if he didn't look out.

The next evening he called again on Anna, for the purpose of soothing the poor girl, and cheering her up, on account of his absence; but he was rather surprised, and looked doubly astonished, when the servant girl repeated the same words as on the previous evening, "*not at home!*"

James Stuart descended the steps, muttering to himself, "Confound the girl; I wonder what is up now? I will send her a note to-morrow and demand an explanation." Accordingly the note was sent, and the answer came from Anna requesting him to discontinue his visits, altogether, at her home. This note and its contents took him all aback entirely; but the only reasonable conclusion which he could arrive at, in justification of her conrse, was, that Anna was, most likely, so terribly provoked at his supposed absence on the first, regularly appointed evening, upon which he was to call, that she had, in her provocation, told the servant to inform him she was "not at home" the next evening when he called; and now in her increased anger, Miss Anna had sent him word in the note "not to call again," &c. But, if he would only let her alone, he knew that she would relent, and be glad again to resume his acquaintance, so soon as she found out her fatal mistake in the matter, which she surely must discover sooner or later. *He* was certain Anna would retract when she made the true discovery, and then she would look for his coming again as impatiently as she had heretofore. As for Tillie Parker, he must go and see *her* soon, again, as he was afraid *she* could scarcely live out of his presence. He was sorry for it, too, but he could not really help being irresistible.

On his next call at Tillie's, however, he met with but little success. Tillie's attention was so engrossed with George Gardner, Effie's brother, that she had scarcely a bow for him, or even a smile of recognition when he entered. His feelings of self-complacency fell about twenty-five degrees below freezing point, when he witnessed how her attention was all confined to George, and the slight seemed to be an intended one, he, James Stuart, thought. He left at an early hour, not feeling at all satisfied with the evening's proceedings, and quite chagrined over the treatment he had received from Miss Tillie Parker and company. He felt as though he could not "give up the ship" yet; he had certainly the first claims, he thought, upon her attentions, and had kept company with her before George Gardner had, and he thought surely the oldest claimant had first rights, therefore he called afterwards several times. Every time he went he invariably found George Gardner there, and was always received with the same coldness and indifference by both Tillie and George. The last time he called Tillie's remarks became less and less frequent, and what little was said to him was said by George in a very commonplace manner, and upon commonplace subjects. He ceased going to Tillie Parker's after that.

He had neither seen nor heard from Anna Perry since he had been so unceremoniously dismissed from her company; but he was partially consoled for Anna's silence and Tillie's coldness, by the bright smiles and encouraging manner of Effie Gardner, who had hitherto treated his advances with only ordinary kindness; though in reality she had not been as indifferent, he believed, as she pretended to be, and that *he* knew was done to accomplish an object, undoubtedly. Although James Stuart was, it is true, perfectly well supplied with self-conceit, yet it was a general and prevalent opinion in the minds of all the girls, that with his graceful manners, handsome form, pretty mustache and charming conversational powers, he was truly one of the very kind of young men who always captivate the eye and heart of almost any and every young lady with whom they come in contact. James Stuart's winsome and entertaining manners were well calculated to please and charm any fair maid upon whom he brought to bear his fascinating powers. His self-conceit seldom appeared before strangers, further than to carry him with the utmost ease and self-possession through difficulties which would have discouraged a more bashful and diffident, but, perhaps, better-principled man than himself.

Having received such cool treatment from both Anna Perry and Tillie Parker, he now devoted all his attentions to Effie Gardner; and she, the little witch, led him on until he was, for the first time in his life, most deeply and truly in love. He had at first courted Effie's society as he had that of others, just for the amusement of gaining her affections; but the society he had at first sought after merely for recreation and pastime, finally became to some extent a necessity to him, and Effie knew it to be so; therefore, James Stuart could see no other alternative by which he could settle it, and thereby relieve himself of the heaviness of his depressed spirit, and at the same time vent out his revenge upon Anna and Tillie for their treatment of him, than to marry Effie, if she would accept his proposal. This he had made up his mind to do, both out of feelings of retaliation to the other two girls, and for an indefinite amount of pure affection for Effie, too, undoubtedly. He was confident that his proposal would meet with favor from Effie; for had she not, over and over again, received his warm caresses, returning his loving and tender glances and emotions more lovingly, and his every smile with smiles still warmer and brighter? "Yes," he exclaimed mentally, "I'm sure of success, and 'there's no such word as fail' here!"

Ah! James Stuart, pity was it that you could not at such times have seen the two pairs of wicked eyes that were watching you through yonder crevices, while the queenly head of wild-fire Effie was so comfortably reclining on your bosom, the face half concealed in the vicinity of your satin vest,—*not*, as you supposed, in such perfect confidence and love, but in reality to cover the flashing bright eyes and wicked, triumphant smiles which lurked around, and played about those tempting cherry-ripe, red lips of your loving ideal!—[Concluded next week.

Books.—Give us a house furnished with books rather than furniture. Both if you can, but books at any rate. To spend several days in a friend's house and hunger for something to read, while you are treading on costly carpets, and sitting down on luxurious chairs, and sleeping upon down, is as if one were bribing your body for the sake of cheating your mind. Books are the windows through which the soul looks out. A house without books is like a room without windows. A book is good company; it is full of conversation without loquacity. It talks to you, not through the ear, but another way.

HARD ON JENKINS.

(*Who has been showing that pert* Miss Sparkle *his new patent enameled Steel Collar.*)

Miss S.—"Has it got your name on?"
Jenkins.—"No. Ah—why do you ask?"
Miss S.—"Simply because I thought it customary: Fido here has got his name on *his!*"

Corner for the Young.

ILLUSTRATED PRIZE REBUS.

Rochester, N. Y. G. F.

☞ To the person (residing out of this county) forwarding the first correct answer to the above Rebus (within two weeks) we will send the Rural New-Yorker for 1868,—or for one year from Oct. 1, 1867, if preferred.

☞ Answer in three weeks.

For Moore's Rural New-Yorker.

GEOGRAPHICAL ENIGMA.

I am composed of 15 letters.
My 1, 12, 6, 9, 15, 4, 12 is a village in Western N. Y.
My 13, 7, 10, 2, 4, 11 is a river in England.
My 7, 3, 11, 12 is a volcano.
My 14, 6, 8, 2 is a sea east of China.
My 4, 5, 15, 12, 6, 2 is an island in Lake Michigan.
My 12, 6, 14, 12, 11, 15 is the name of a capitol.
My whole is the name of a well known humorist.
East Palmyra, N. Y. O. M. Clark.
☞ Answer in two weeks.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I am composed of 14 letters.
My 11, 14, is a personal pronoun.
My 7, 9, 3 is a combustible substance.
My 6, 5, 13, 14 is a number.
My 11, 9, 8 is a kind of meat.
My 10, 2, 6 is a verb.
My 1, 4, 12, 8 is a capricious notion.
My whole is a very convenient household article.
Huron, Ohio. Miss M. C. Jarrett.
☞ Answer in two weeks.

For Moore's Rural New-Yorker.

A CHARADE.

My first is descriptive of scenery bright,
Where Pan and Pomona of old held their sway,
But as science advanced those heathen took fright,
And from realms so blissful they fled far away.

My second compounded a dweller implies
In a city renowned for its commerce far spread;
From my whole gross ignorance rapidly flies,
And knowledge substantial soon reigns in its stead.
Marshalton, Pa. M. D.

ANSWERS TO ENIGMAS, &c., IN No. 930.

Answer to Geographical Enigma:—Honesty is the best Policy.

Answer to Anagram:

Father! when I shall come to thee some day
Bringing my sheaves,
Wilt thou look down on me and say
Nothing but leaves?
I know they are not much, my soul despairs
And silent grieves,
To find among the wheat so many tares,
Bound in my sheaves.

Answer to Poetical Enigma:—Cares (caress.)

—(AND THE BEST COMBINATION OF ALL THESE)—
THEN SUBSCRIBE FOR

MOORE'S RURAL NEW-YORKER,

A WEEKLY JOURNAL,

Established in 1850,—which is the Leading and Largest-Circulating RURAL, FAMILY, LITERARY and GENERAL NEWSPAPER on the Continent—most conclusive evidence that it is

THE BEST PAPER OF ITS CLASS!

FORM, STYLE, TERMS, &c.

The Rural comprises Eight Double Quarto Pages,—published in superior style, with Copper-faced Type, Good Paper, and many Appropriate and Costly Engravings, (it being the most profusely Illustrated Weekly in its sphere of Journalism.) A Title Page, Index, &c. given at close of each Volume, complete for binding.

TERMS—Only $3 a Year; Five Copies for $14; Seven for $19; Ten for $25, &c. A new Quarter commences Oct. 5, and Volume XIX in January. **Now is the Time to Subscribe and form Clubs.** The most liberal inducements to Local Agents, Clubs, &c., but no traveling agents are employed. Specimens, Show-Bills, Premium Lists, &c., SENT FREE—or we will send the 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, on trial, or as specimens, for ONLY FIFTY CENTS. Address

D. D. T. MOORE, Rochester, N. Y.

The Publisher to the Public.

Local Club Agents.—We want a live, wide-awake agent for the Rural in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

How to Remit.—The safest way to remit for the Rural is by Draft or Post-Office Money Order,—and either of these, if made payable to his order, may be sent at the risk of the Publisher.

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly.

Our Club Rate.—The lowest Club Rate of the Rural is $2.50, and if any agents offer it for less they must pay us that price. *Our* rates are invariable, and none are authorized to depart from them—though of course we cannot prevent agents from doing so, or even giving away the paper; that is their business.

Premium List, Show-Bill, &c.—Our Premiums to Club Agents are more liberal than ever before, but we have not space to give a list of them in the Rural. Premium Lists, Show-Bills, Specimens, &c., are promptly sent, free, to all applicants. Give us your address, and also that of any friends who may be disposed to form clubs, that you and they may see our offers of "Good Pay for Doing Good."

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the Rural. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent. Our premiums are liberal and sure. Send for the list, which (together with show-bill, prospectus, &c.,) we send free. A little effort will secure a good club in almost any locality, and this is the best season to make the effort. Reader, will you please see that the matter is attended to in *your* neighborhood?

The Price of the Rural.—If any one objects to the price of the Rural, please ask him or her to compare the paper in Contents, Appearance, &c., with any similar journal, weekly or monthly,—or with any reprint of a daily or trashy literary paper. State the FACT that the first cost of the Rural (for Editorial and other Contributions, Engravings, &c., &c.) is far greater than that of any of its contemporaries,—and moreover that it is far cheaper now, at $3, than it was at $2 before the war, compared with the prices of provisions, clothing, etc. A little examination and figuring will satisfy any candid, intelligent person that the Rural New-Yorker is really the cheapest paper of its class.

American, French, Homœopathic and VANILLA CHOCOLATE PREPARED COCOA, BROMA,
Cocoa Paste, Homœopathic Cocoa, Cocoa Shells, Cracked Cocoa, etc.

THESE Manufactures, to which FIRST PREMIUMS have been awarded by the CHIEF INSTITUTES and FAIRS of the Union, and at the PARIS EXPOSITION OF 1867, are an excellent diet for children, invalids and persons in health, allay rather than induce the nervous excitement attendant upon the use of tea or coffee, and are recommended by the most eminent physicians.

For sale by the principal Grocers in the United States.

WALTER BAKER & CO.,
Dorchester, - - - Mass.

PURE WATER.

HEALTH AND ECONOMY. Patent Lead Encased Block-Tin Pipe—Recommended by the Croton Water Board of New York, and the Boards of Brooklyn, Philadelphia and Boston and by the most eminent medical men of the country. Costs less than Lead Pipe, and is much stronger. Recent improvements enable us to supply *this* Pipe at a *less* price per foot than common Lead Pipe. To give the cost per foot, please furnish the pressure or head of water, and bore of Pipe. Pamphlets sent FREE on application. Address THE COLWELL, SHAW & WILLARD MANUFACTURING CO., foot of West 20th St., or 105 Beekman St. Corner of Pearl Street, New York. We also manufacture and keep constantly on hand, all and sizes weights of Lead Pipe and Sheet Lead. 930-4t

SEND STAMP FOR SIXTEEN Pages Description of some of the finest Imported and Thorough-Bred Animals and Fowls in America.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other Journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

AGRICULTURAL.

HINTS FOR THE MONTH.

WINTER in his coming finds the farming interest in most respects well prepared for his reign. Over a large portion of the country the weather during the latter part of the summer and autumn has been unprecedentedly favorable to the saving of crops rapidly and in good order, and to the accomplishment of all necessary farm work. The fodder crops for winter use were generally good, and the grain stacks of the West have been thrashed and their contents safely secured against further injury from the elements. There should be no grown wheat this year. The greatest drawback to a most satisfactory condition of things is the long continued drouth which has prevailed in Western New York, Western Pennsylvania, and throughout the States west of these and north of the Ohio river. The want of water is felt as never before in these regions, and a wonderful amount of trouble and labor is incurred to procure the necessary supplies. Some of our Western exchanges give accounts of the hauling of water from the distance of eight or ten miles to supply large towns; railroad trains cannot make regular time for lack of water, and stock is driven miles daily in search of the life-giving fluid. Hence, if winter sets in, as it may, without much rain, the *cold water question* will be a very important one with many of our readers. What means can be used to avert suffering and labor, from lack of water, can only be determined when the circumstances of a locality are understood, but we suggest that farmers combine their efforts, as through coöperative labor they will be apt to accomplish most with least cost in this direction.

Fuel.—Farmers having timber lots should cull the dead, fallen and worthless trees first; after that it is better to cut clean as you go, and let a new growth spring up. Experiments have proved that land yields more timber if cut over once in twenty or twenty-five years than if the trees are allowed to grow a longer time. If you burn coal get in a full supply; you could have done it cheaper months ago, and it is less costly now than it will be at the middle or end of winter. It is well to examine the peat question and see what you can make out of that. Perhaps that low, worthless piece of ground on your farm would save you fifty or one hundred dollars yearly.

Manure.—Draw all the manure you can on to your planting ground for next year and spread it, unless the surface is uneven enough for the water to wash it away. Keep the hog pens dry with leaves, sods, potato tops, weeds, straw—something which will promote the comfort of the stock and make manure. Dry leaves make good bedding for horses and cattle, and they can be easily gathered in large quantities this fall.

Stock.—It pays to cut fodder and grind grain for horses and stabled cattle. It pays to mix food. It is a fact that has been demonstrated repeatedly that stock will thrive better on food properly selected, cut fine and mixed, than on far more costly food fed whole and without judicious mixing. Read carefully the articles in the RURAL on this subject. Calves should have special attention in the beginning of winter. They need shelter, water and tender food. Get the box stalls ready for the colts, and feed them some ground oats every day. They need shelter in bad weather and plenty of exercise all the time.

Poultry.—The manure which can be saved in a good poultry house will pay twenty per cent. interest each year on its cost. Convenience to yourself, shelter for the fowls, and fresh eggs in winter may thus be had for nothing if you throw in a little pleasant labor. Give the poultry, then, a good house and make them roost in it. Don't crowd the fowls, but give light, room, warmth and variety of food. Poultry for killing on Christmas and New Years should be fattening now.

Swine.—Killing hogs will be in order this month. For home use the fattest pork is not the best or healthiest, and it is doubtful if there will be much profit in making very fat pork for the market.

Cellars.—Overhaul the cellar and remove all decaying vegetables; this work should be done often as a safeguard against disease. A ventilator should extend from the cellar to the top of the house, or connect with a chimney.

Accounts.—Balance your accounts this month; pay your bills; scan your system of farming and improve it; take an inventory of stock, and find out to a dollar on the 31st day of December how much you have added to your capital during the past year.

Farmers' Clubs.—Organize a Farmers' Club. How shall it be done? Invite a few of your neighbors to your house some evening; set good cheer before them, and talk about farming, fruit growing, &c. Then your guests will reciprocate the invitation and there will be other evening meetings. So you will have a Farmers' Club. You can enlarge on this plan as you please—have some essays, select questions for discussion, and appoint a Secretary. You will not forget to contribute to our Farmers' Club, nor, of course, to subscribe promptly for MOORE'S RURAL NEW-YORKER.

SELECTION AND PREPARATION OF WINTER FOOD FOR ANIMALS.—NO. II.

COOKING.

THE first inquiry under this head is, What is the effect of cooking food? Starch, as found in the cells of vegetables, consists of globules or grains, contained in a kind of sac, and in order to burst these grains it must be subjected to heat. PAYEN, on examination with the microscope, found that when starch was mixed with water and heated to 140°, some of the smaller grains absorbed water and burst, but many still remained unaffected, and only burst between 162° and 212° of heat. This shows, conclusively, that the heat of the animal stomach is not sufficient to utilize starchy food; and when we reflect that about sixty per cent. of the cereal grains consists of starch, we see the great loss which must occur from the want of cooking. And if the cereal grains require cooking, how much more must the dry fiber of hay, straw and corn fodder require it! The woody fiber of hay, straw, &c., consists, chemically, of the same elements as starch. Starch may be turned into gum and sugar; so may woody fiber, after being dried and ground, and by the same means, heat and dilute sulphuric acid. The famous "corn sugar" patent, which took in the sugar men of New York city to the tune of $600,000, is not yet forgotten. It was simply the old chemical process revamped.

All woody fiber will yield to steam pressure, and when thus reduced to a pulpy mass, most of it is digestible, and can be assimilated by the animal stomach. Grass, the natural food of domestic animals, in its succulent state is soluble, and needs but the natural heat and acid of the stomach to convert it into nutriment. Hay, straw, &c., by thorough steaming is reconverted into grass, and thus the animal may be furnished with its natural food through the winter.

We can say, after eleven years experience in cooking the winter food of our animals, that the advantages are all that theory would indicate. Steaming renders mouldy hay, straw and corn-stalks sweet and palatable, thus restoring their value; renders peas and beans agreeable food for horses, as well as other stock, and thus enables the feeder to combine more nitrogenous food in the diet of his animals.

We have found half hay and half straw mixed and steamed more than equal to hay unsteamed. Pea straw when cooked is readily eaten, and, if cut early, nearly as nutricious as hay. Bean straw, which, when dry, is generally left untouched by cattle, will be all eaten if steamed with hay, and, as analysis shows, is more than equal in flesh forming matter to hay. Corn-stalks, when cut short and steamed, will be eaten clean by cattle, horses and sheep. By cutting and cooking, all the straw and coarse fodder raised on the farm may be turned into milk, flesh and wool, besides adding largely to the manure heap.

In cities where cows are kept to supply milk, and are milked through the winter, cooking their food will greatly increase the yield of milk, improve the condition of the cow, and reduce the expense of keeping at least one-third. The saving in food for each cow in milk will be, at least, eight dollars per season. This item may be worth looking after by city feeders. The mixture of oil and pea meal and bran, as we have indicated, makes an excellent food to produce milk and keep up the condition of the cow. One and a half pounds each of oil and pea meal, and three pounds of bran, mixed with ten pounds of hay and steamed, per day, for each cow weighing 800 pounds, will generally be sufficient. This may be thought a small quantity from which a cow of that size, at her best season, could produce four gallons of milk and keep up her condition; but it must be remembered that four gallons of milk contain only about four pounds of dry matter, which will leave a supply for the thrift of the cow. Yet it is always the best economy to give a cow in milk all she will eat with a good appetite; for it takes a certain quantity to keep the cow in condition without gaining any milk, and what she will eat above this should be added to the milk. Thirty-three to forty per cent. would require to be added if uncooked. But with the estimate given, it will be seen what a splendid margin there is in producing milk in cities at ten cents per quart!

This combination of food recommended for milch cows is also well adapted to growing the young animal, as it contains a full supply of bone and muscle nutriment. For fattening, let the pea meal be replaced with six pounds of corn meal. Corn meal may also be used in small quantities for milk where butter is to be made.

EFFECT OF COOKED FOOD UPON ANIMALS.

It has sometimes been urged, that although the animal eats less and for a time thrives better upon cooked food, yet its tendency is to weaken the stamina of the system and produce premature decay. We have been able to test this theory fairly, and can now show as the result, cows and horses, which have been fed every winter upon cooked food for eleven years, and so far from showing any ill effects of this way of feeding, the cows have never been sick, and are now in fine condition and heart, and the horses able to do good work, although sixteen and seventeen years old. We have raised many colts from weaning age to five years, and never saw any want of stamina. The effect of cooked food upon horses with a cough or a sudden cold is very remarkable, almost uniformly producing a cure in a few days. It will cure incipient heaves, correct costiveness, and materially improve a founder. In fact, our animals have been more uniformly healthy since feeding them upon cooked food. But, it is true, that sheep and other animals fattened rapidly upon steamed food, will be softer in flesh than if fattened more slowly upon uncooked food. Yet this would naturally be expected. Grass grown rapidly upon very rich land is not so solid as that grown slowly upon poorer land; but who would prefer the poorer land in consequence? Just before animals are ready for the butchers it is well to feed them a few days upon dry, uncooked food, which will correct this softness of flesh.

PREPARING FOOD FOR STEAMING.

The cut hay, straw and hay, or other cut feed, is moistened with a large watering pot (if done by hand,) at the rate of, at least, two gallons of water to five bushels of feed, while it is being stirred up with a fork; then if bran, meal or other feed is used with it, it should be sifted on and mixed evenly. Two quarts of bran to the bushel of straw will render wheat, barley, oat and pea straw equal to good timothy hay. A little salt should be added, which will be perfectly diffused through the mass. The feed must always be moistened before steaming, for steam will not cook dry hay or straw, but only dry it more. Moisture is required to absorb the steam. In our next we shall describe the various apparatus for cooking food.—E. W. S.

STORING MANURE.

How to store manure to avert material waste until it is applied to the soil is a question recognized as important by progressive farmers. The chief waste in unprotected yards comes from the water passing through it and carrying away soluble elements, and many deem sheds and cellars for storing and covering the manure very paying improvements to the farm. Doubtless they are, but cellars are inconvenient in many respects and situations, and covered manure requires considerable attention to prevent great waste by overheating or "fire fanging." Water is a benefit to a manure pile if it is not allowed to leach through it and flow away, and generally it has to be supplied to prevent "burning" in sheds and cellars. Our illustrations represent a plan of storing it without any cover, or as a son of Erin would phrase it, "with the cover on the bottom of the pile."

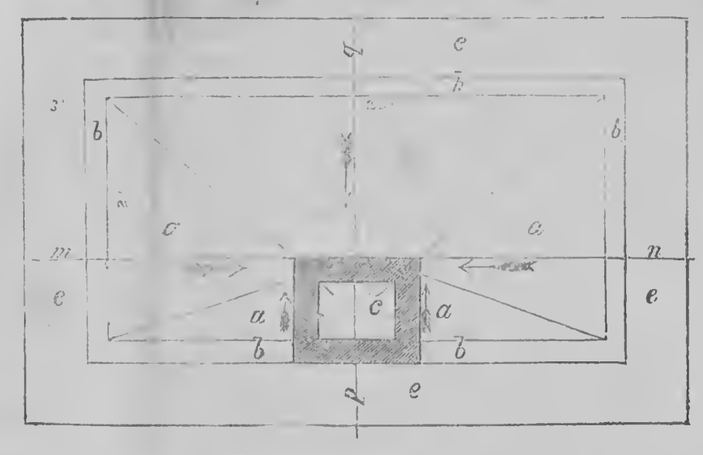

FIG. 1.—GROUND PLAN.

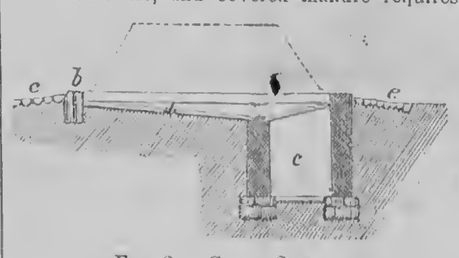

FIG. 2.—CROSS SECTION.

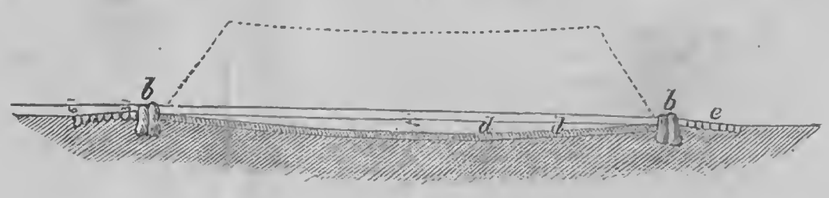

FIG. 3.—CROSS SECTION.

Fig. 1 is the ground plan of a yard for storing manure out of cover, so arranged that no loss can result from leaching. Fig. 2 is a section view of the same in the direction of the line, *m*, *n*; and Fig. 3 is a section view in the direction of the line, *p*, *q*. In these figures *a* represents the bottom of the yard, which is covered with a smooth pavement, *d*, laid in water-proof cement, and slopes from the outside towards the reservoir, *c*, which is sunk entirely below. This cistern is also lined with a cement wall, and its cover is so perforated that liquids will flow into it. For convenience in removing the liquid manure or pumping it back on to the pile, the cistern is placed on one side of the yard. Around the outside of the yard runs a double row of curb stone, *b*, which project above the surface about six inches. Outside of this is a pavement, *e*, of common field stone, about three feet broad. The plan represents a yard twelve feet by twenty-four.

It will be seen that if the pavement and reservoir are made water tight, as they should be, nothing can escape from the manure pile and be lost by reason of water passing through it. The excess of fluid is collected in the cistern, from whence it may be pumped back on the heap or conveyed to the fields; this plan also affords great advantages for composting ingredients for manure. The escape of gas is manifestly no greater than from compost heaps under sheds or in cellars.

SAW-FILING AND SETTING.—No. II.

FIGURE 4 represents the large hook-toothed cross-cut saw. Saws with teeth of this form do their work most rapidly, especially in soft wood. But few persons, however, keep them in good order. To do this one requires to understand clearly the principle of their operation. As before stated the teeth of the cross-cut saw should first cut off the fibers of the chip on each side of

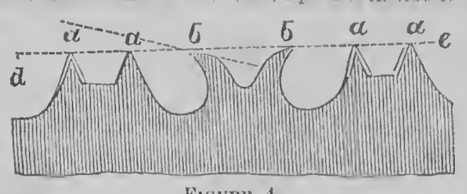

FIGURE 4.

the kerf, and then, by a chisel-like cut remove it. In the saw we are describing, there are, as will be observed, two distinct kinds of teeth. The teeth, *a. a.*, are the ordinary cross-cutting teeth, except that they are perhaps sharper pointed and more phlem shaped, (that is, more obliquely filed,) than usual. The hook-teeth, *b. b.*, are termed coring-teeth, their use being simply to remove the chip. They do not require any set; and it is important that their cutting edge should be kept 1-12th of an inch below the points of the teeth, *a. a.* The latter teeth will wear away considerably the fastest. Have, always, therefore, when you file these saws a straight-edge at hand so that you can be sure the teeth, *b. b.*, are reduced to their proper length. The dotted line, *d. e.*, shows the application of the straight edge. The hook-teeth should be filed squarely; that is, holding the file always perpendicular to the saw plate. The pitch line of the outer edge of the hook-teeth should make an angle of about 30 degrees with a line drawn through the points of the teeth as shown by the dotted line, *e.*

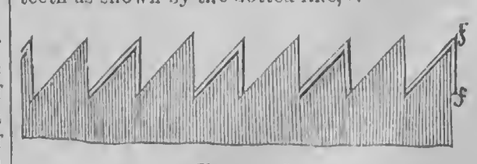

FIGURE 5.

Figure 5 shows the form of teeth of the hand-slitting saw. This kind of saw is used entirely for cutting lengthwise the grain of wood. Phlem-shaped teeth are here unnecessary, as a chisel-like cut is made in one direction. The line, *f*, *f*, is shown as perpendicular to the base of the tooth. It may fall to the left or right of this somewhat according as the saw is intended for hard or soft wood. Saws either of this kind or cross-cutting should have comparatively small sized teeth for working in hard woods. Saws working in hard and dry timber require the least width of "set." The width of "set" should be a trifle more in the middle of the saw than at each end.

The art of filing can only be acquired by practice. One ought to be able to keep a perfectly flat or plane surface under regular strokes of the file, and to do this the file must be drawn and pushed in straight lines, without any rocking motion. It is a golden rule to have a place for every tool and every tool in its place. Next in importance keep every tool in good order. Farmers ought to be familiar with the use of most kinds of edge tools. This can be acquired only through the right kind of practice with them. Never attempt any mechanical work without a

clear idea, a well-defined plan of that you wish to accomplish. If you are not well used to a tool make your motions very slowly, aiming to do your work well regardless of time. You may safely try to do your work quickly after you are well accustomed to the motions to be used. Many mechanics are bungling and unskillful through life from the hurried, nervous and disconnected habit of work which was acquired in their first efforts. L. W.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

To CORRESPONDENTS.—Mr. RANDALL'S address is Cort and Village, Cortland Co., N. Y. All communications intended for this Department, and all inquiries relating to sheep, should be addressed to him as above.

N. Y. WOOL GROWERS' ASSOCIATION.

THE Annual Meeting of the N. Y. State Sheep Breeders' and Wool Growers' Association will be held in Syracuse, December 12th, at 1 o'clock P. M.

HENRY S. RANDALL, *President.*
H. D. L. SWEET, *Secretary.*

NATIONAL WOOL GROWERS' ASSOCIATION.

THE Executive Committee of the National Wool Growers' Association met pursuant to the call of the President, at Pittsburg, Pa., Nov. 26th, and continued in session two days. At the time of this writing (Nov. 29th) we have not the full proceedings prepared for publication, but shall give them next week.

[With the above paragraph, we received from Dr. RANDALL a report of the proceedings of a public meeting held in Pittsburg on the 27th ult., in which the Executive Committee of the N. W. G. Association participated at the invitation of the officers of the Pennsylvania State W. G. Association,—but lack of space, and the late hour of its reception, preclude its publication.—M.]

IMPORTS OF WOOL AND WOOLENS.

WE have obtained from the New York Custom House the following statement of the "Imports of Wool and Manufactures of Wool into the port of New York, during the second quarter of 1867:"

	Quantity, lbs.	Value, $.
Wool Raw,.....	8,512,021	1,426,985
Wool Manufactured,...		5,195,063

In the table published last week, it appeared that the importations of raw wool, except flocks, in the first quarter of 1867, were 5,242,315 lbs.; of manufactured wool $10,019,044 making in the aggregate imports for the first half of the year, 13,754,336 pounds of raw wool, and $15,214,107 worth of manufactured wool, which exhibits a falling off from the first half year's imports of 1866, of 26,250,110 lbs. of raw and $8,986,069 worth of manufactured wool. Again we say the tariff *works!*

PERICARDITIS.

SUWANEE, NEAR EDDYVILLE, Lyon Co., Ky.

HON. H. S. RANDALL, LL. D.—*My Dear Sir:* I have been intending to write to you upon several matters since my last,—but divers disappointments and absences have heretofore prevented the accomplishment of that good purpose. I write now simply to describe and ask information about a new disease amongst sheep,—at least I suppose it to be an unusual, if not a new, disease. I never heard of its like, nor can I find any description of it in books on this subject.

Last week, as I rode through one of my pastures, I found one of the lambs—a half-blood Cotswold and South Down, and about five months old,—apparently indisposed. On my return, three or four hours later, I found her dead. She was exceedingly fat. The pastures were high, rolling, dry, and in appearance presenting all the signs of salubrity. And as this was the fifth or sixth case of like complaint and death, I determined to make, in person, a *post mortem* examination. Upon dissection I discovered—First, that, for a lamb, she was very fat. I should say that, beside an unusual quantity of fat within, there were two strips of fat running up each side of the backbone eight or ten inches long, three or four broad, and perhaps half an inch in thickness. Still I did not consider her fat to be at all unnatural either in its quantity, or color, or consistency. Second, the liver, lungs, melt, gall-bladder, and other entrails, and all internal parts, seemed to be perfectly healthy in all their appearances, with these two exceptions, viz: a minute edge of one of the lungs, about an inch in diameter, was so red as to look quite like so much liver. Do you call that appearance "hepalised?" Next, I thought the gall-bladder was unusually large, and it was certainly most fully distended. Third, and here is the supposed novelty, *the heart was broken*,—that is to say, the *pericardium* was bursted away from four-fifths of its surface and rolled back upon itself inside outward, whilst the remaining fifth part—upon its right lower side as the dissector faced it—alone adhered to it naturally. The organ itself, except as to this small part, presented somewhat the appearance of a pale red lumps of honey-combed flesh, or more exactly still, it looked like a heart-shaped mass, ragged in points of flesh, and their intervening cavities running up and down, and longer than wide. Some three clots of dark red solidified blood in the cavities finishes the description. Otherwise the heart seemed to have been wholly depleted of its proper fluid; and when the knife cut apart the fore-ribs and brisket, a flood of dark blood gushed out of the hollow between.

This is all I know. Upon inquiry I learned that the predecessors in this course of disease and death had all been alike very fat; that those of them, which were lambs, had also been half and half Cotswolds and South Downs, and that their symptoms of ailment were about thus, viz: a few hours of restlessness and growing feebleness—neither of them very remarkable—ended in a quiet, quick death. In one case the lamb, also a ewe, was lying down. Being raised to its feet, it leaned against the shepherd's leg and ate a few bites of grass, sank again through feebleness, gasped once or twice and was dead. Nothing was done to them when alive, except in one case, to bleed by docking; nor in the dissection after death was the heart at all examined. The liver alone was looked to upon suspicion of the "liver rot." In my case there was no external symptom of disease—to me. Some moisture had exuded from the mouth or nose, upon which the green flies were settled, and the victim was lying rather upon its breast than on its side.

What is this case? It certainly presents an instance of at least one *female dying of a broken heart.* Probably all of them died of the same infirmity. I believe there is no other recorded instance of like casualty, save that of a blacksmith (mule) who "burst his mighty heart" in the attempt to lift his anvil. But, jesting apart, and these cases are no jesting matter with me, what disease is this? and what shall be done to prevent or cure it? I need only add that, except their weekly saltings, these sheep have had no feed since winter except the grass of their pastures, changed twice, as Timothy, Red-top, sedge, (if they would eat it,) and the shrubs of the enclosed bushes.

The common sheep, running all the time with them and having the same treatment, except their entering the spring life in a leaner condition, have neither died nor been sick. Some of them, too, are very fat for common sheep. My man thinks, too, that all the fat lambs which have so died were those half-bloods, and that none of the full-blood South Downs have died. I state his belief for what it is worth. But, though he is truthful, I do not myself attach much interest to observations so inexact as his. Let us hear from the experienced and also the scientific shepherds. ELMAN.

REMARKS.—The above statements—made, we may as well say, by Ex-Governor CHARLES ANDERSON, late of Ohio,—present an instance of a rare, if not wholly unprecedented, disease in sheep. At least we do not now call to mind any previously described instance of it. The post mortem examination made by Gov. ANDERSON clearly discloses, we think, the effects of *pericarditis*, or inflammation of the interior surface of the pericardium, the membrane which incloses the heart, and which, in health, contains a fluid which prevents the surface of the heart from becoming dry. The appearance of the surface of the heart was due to inflammation and the resulting depositions of lymph. Another product of the inflammation was that dark reddish serous fluid which was found in the thoracic cavity or chest, and which "gushed out" when that cavity was opened, and was mistaken for blood. This was originally deposited between the heart and pericardium, and it pressed more and more on the latter as that membrane lost its integrity of structure, until it finally burst it open and escaped into the chest. Nothing in the description shows that the heart itself was "broken" or ruptured. We wish that the appearance of the interior of this organ and its cavities had also been described.

It will not do to assume that the other cases, where the condition of the heart was not examined, were the same.

There is nothing mentioned in respect to the situation, feed, condition or blood of the sheep, which was in the least degree calculated to produce *pericarditis* or any other disease. No preventive measures can be suggested except that general regimen which tends to preserve health, and therefore to avert all forms of disease.

Of remedies for pericarditis we can speak with little satisfaction. If its external symptoms are not discoverable until a short period before death, as the facts given by our correspondent would seem to imply—a matter, however, which deserves further and careful scrutiny—it is obvious that no remedy then administered can be of any avail. Indeed, we should have no hope of successfully combating the disease in any stage, after its actual establishment, in the case of an animal so little capable of resisting any serious attack on its vital organs as the sheep. It is idle, therefore, to speculate about remedies until the facts are better understood.

A SOUTH AMERICAN SHEPHERD.

A SHEPHERD'S hut or house in Buenos Ayres is called a *puesto;* the shepherd is a *puestero*, who is generally paid by an allotment of one-third of the wool and one-third the increase, besides being allowed as much mutton as he can consume. The only hope of success for an emigrant is to get an engagement on these terms; for, if the owner of a small capital, he would almost certainly lose it and be ruined if he purchased a part of a flock, which some have imagined to be the high road to fortune. It is an uphill struggle on the plan of "thirds," the writer having been told by steady industrious men, well qualified for their business, that after a battle of eight or nine years they were in worse circumstances than when they first arrived in the country.

Puestos, like estancias, are of various sizes. Some are merely rude huts containing a single room, furnished with one or more *ox skulls*, facetiously called "ivory chairs," and a hide for a bed; whilst others are comfortable cottages, furnished in much the same manner as the houses of small farmers or laborers in England.

Shepherds (on thirds) are generally unmarried and live alone. Their dogs are their only companions. Some of them do not hear the sound of a human voice for weeks. I have been told by more than one, that when they first took possession of their hermitages every day seemed as long as a month; but that after a time they got accustomed to solitude, and did not dislike it. It seems an unnatural life, however, and I fancy the feelings must become so far petrified. Yet many of them are kind-hearted fellows, and the stranger is always sure of a hospitable welcome at a puesto. On his arrival the shepherd kindles a fire (of fat and sheep-dung,) roasts or stews mutton, prepares tea or mate, produces a bottle of cane, and takes every pains, which appears to him a pleasure, to make his guest comfortable. On rare occasions the puestero gives a party (*sub rosa,*) and fellow shepherds ride for leagues, after their sheep are in the corrals, to spend the night in mirth and sociality. Roast fowls by the dozen, mutton galore, biscuits and tea are provided for the bodily needs, and gin and cane help to drive away dull care. The spirits, so long depressed, rise in an inverse proportion on that very account. Songs are sung, jests are cracked, and in due time the mirth and fun grow fast and furious. The party disperses about cock-crow, each member trusting to the sagacity of his horse to find the way home.

Herding sheep is all done in Buenos Ayres either on horseback or on the top of the chimney. The shepherd, whilst busied with his household affairs, his quinta or garden, occasionally mounts the ladder leading to the chimney-top, from which he obtains a wider prospect of the camp, and his practiced eye can distinguish his flock amongst a jungle of thistles when it is invisible to others. He can also guess very accurately what his sheep intend to do—whether they mean to remain on their *querencia*, or proper pasturage, or are inclined to wander into forbidden ground. He requires to keep a sharp look-out, lest they meet and mix with another flock, an accident that sometimes happens, and which occasions a great deal of trouble, as the separation can only be effected by catching and lifting out of the corral every individual member of one of the flocks. Every shepherd owns two or three horses, and one is always kept saddled and tied up, that he may be able to gallop to his flock at any moment. In *pamperos*—the tremendous gales, often laden with dust, that sweep across the pampas—the shepherd is obliged to be doubly vigilant and to keep with his flock, as the sheep run at full gallop before the hurricane, and are often entirely lost. A little before noon in summer sheep arrange themselves into curiously regular masses, and sleep for several hours. It is then the shepherd, if so inclined, may also take his siesta.—*People's Magazine, London.*

HOW SHEEP WERE IMPORTED IN 1810.

THE following old document, containing articles of agreement between some Connecticut Merino sheep importers in 1810, will be read with curiosity:

Whereas, the importation of Merino sheep from Spain into the United States of America, and into this State, is become a matter of the highest importance to the State, and if successful in importation, promises a vast reward to the importers, and it being a voyage attended with difficulty and hazard, the following plan of a voyage is contemplated for the sd purpose of importing a cargo of the full blooded Merino sheep into this State from Spain, viz.:—To consist of fifty shares of $100 each, so that in case of loss it may be borne without inconvenience to the adventurers. Fifty dollars on each share is to be paid to Elisha Ayer, Wm. Kinne and Jonah Witter, as agents for said company, by the 10th of April next to prosecute sd voyage. The remaining fifty dollars will not be required unless the vessel be seized, captured, condemned or lost, in which case the remaining fifty dollars will be required by the 25th of Nov. next. But if the vessel return, no more will be required than sufficient to pay the charter of sd vessel, seamans' wage, port charges, insurance and expenses in foreign ports.

Proposition—Silas P. Halsey is to go master of sd. vessel, in consideration of twenty dollars per month on sd. voyage, and to have one-fifteenth part of all the sheep that shall be landed in the United States. And Elisha Ayer, Jr.,* is to go in sd. vessel as supercargo on sd. voyage, and to procure sd. sheep, for the consideration of two and a half per cent. commissions on sales and purchases, and also to have one-fifteenth part of all the sheep that shall be landed in the U. S. A. And each seaman is to have a primage of fifty cents on each sheep that shall be so landed, in addition to his wages. And in case this voyage should prove successful, the sheep imported are to be kept in one entire flock, under the direction of an agent or agents, to be appointed by the subscribers, each share to be entitled to one vote in the appointment of such agent or agents, and each proprietor to be entitled to his proportion of the avails of the profits of sd. sheep until the majority of sd. proprietors, according to their shares, shall order and direct otherwise.

Preston, March 30th, A. D. 1810.

A PLAN OF THE VOYAGE.

A suitable vessel is to be chartered, valued at	$2,500 00
Cargo.	
30 thousand pipes staves, @ say $60 per M,..	1,800 00
100 bushels beans, @ $1.....	100 00
Ship's Provisions.	
5 bbls. mess pork, @ $20 per bbl.....	100 00
3 do to beef, @ $15.....	45 00
1,000 lbs. bread, @ $7 per cwt.....	70 00
Small stores.....	50 00
Laying in for Sheep.	
50 bushels corn, @ $1.....	50 00
100 do oats, @ 35c.....	35 00
1½ tons hay.....	20 00
15 water casks, @ $2.....	30 00
Advance wages for people.....	100 00
Expense for arming.....	50 00
Disbursements.....	50 00
	$2,500 00

We, the subscribers, hereby agree to take the number of shares affixed to our names in the foregoing voyage, and to pay fifty dollars on each share by the tenth of April next, to E Ayer, Wm. Kinne and J. Witter, as agents for us to prosecute the voyage. And the remaining fifty dollars, or such part thereof as shall be required on the return of sd. vessel, for the purposes aforesaid, or by the 25th of Nov., 1810.

The voyage was made and about 150 Spanish Merinos brought safely home. This contract was recently obtained of LUCAS WITTER, Esq., of Preston, Conn., (son of JONAH WITTER, deceased, one of the contractors,) by Mr. ASA W. FANNING of Rochester, N. Y., to whom we are indebted for the privilege of copying, &c. Mr. FANNING remembers the arrival of the sheep at Gale's Ferry, New London, Conn., and saw them. He says they looked like dwarfs, compared with the Merinos of to-day.

* Mr. Ayer is still living in Ledyard, Conn., aged 82.

Rural Spirit of the Press.

Soiling vs. Pasturing.

LET me recite, says a writer in the New England Homestead, the experience and practice of a friend of mine. Coming into possession of about nine acres of land, in the neighborhood of a good market made by the demands of a large literary institution, he cast about as to what was to be done. Two cows and a horse was the stock in trade for neat cattle. He was obliged to pay per season, men for pasturage, what they thought it was worth, and at the same time it was no small job to drive his cows back and forth. That determined him to keep his cows in the barn. The greatest trouble was the rapid accumulation of manure. By good husbandry he properly secured that—he kept feeding it to his crops. Finding his crops increasing, he added another cow. Another cow only made more manure. More manure, husbanded in the same way, made more crops, and the third year he added another cow. Now began another serious difficulty. His barn was too small. Still, at the end of the fourth year he put in another cow, and set himself to work to get up a new barn, and when I last saw him he had a new barn with modern improvements, of good size, a horse, a pair of cattle, and five cows, and yet had not thought of buying more land, but wanted one more cow. Now people who do not want a large accumulation of manure and a gradual increase of crops, should not adopt that style. But it seems to me, that in our towns, where homesteads are in small lots and not easily procured, no better course could be pursued than soiling the cow, and at the same time fattening the soil.

Butter Making.

A CORRESPONDENT of the St. Albans Messenger remarks on his process of making butter as follows:—I keep twenty-three cows of the native stock, with a slight mixture of Durham; their feed was the fall feed in my mow fields, with pumpkins in the morning; the cream was gathered in three days from milk that set thirty-six hours after milking; the cream then set twenty-four hours, then was churned; when the butter came it was put in a wooden bowl and washed with spring water until the milk was all washed out and the water ceased to be colored and remained clear, then the Ashton salt is worked in by hand at the rate of one ounce to a pound of butter; the butter is then set away to stand twenty-four hours, then it is worked over by hand, taking a small quantity at a time and working out all the brine, then it is pounded down in the tub; the tub is filled within a half-inch of the top, then it is covered with a cloth over which is spread a thin layer of salt. This tub was packed the 4th of October. Cream is not churned the same day it is skimmed, as it will sometimes have a peculiar taste which it does not have after standing twenty-four hours. In the fall the pans are filled two-thirds full and the cream rises as well, but in summer it should be more shallow."

The Hog Cholera.

H. C. DICKSON, Talbot Co., Ga., writes the Southern Cultivator about the hog cholera, and his experiments with his hogs when afflicted with it. He says:—"My hogs died rapidly. I decided that I would try some experiments on them, as it could do no harm. As soon as one refused to eat I put it in a pen, and if its bowels were costive, (which is apt to be the case in the first stages of the disease,) I gave it a large dose of salts—say a tea-cup half full to a hog a year old or upwards. If it did not act freely in five or six hours, I repeated the dose, which always had the desired effect. As soon as the color of the operations began to change, I gave it two teaspoonsful of laudanum, in about as much warm water, and repeated the dose, if necessary, in five or six hours. I never had to give the third dose, and often one would answer."

Hogs that are running off at the bowels need nothing but laudanum. Where a hog is to be drenched, turn the animal upon the back and put a stick in the mouth to prevent biting off the bottle neck, and the drenching is easily done.

Yoking Oxen.

THE old story, about yoking oxen by the horns, is revived in some of the agricultural journals. "A. J. W.," in the N. H. Farmer, says the best way to couple working oxen is to have the yoke fitted to rest on the head just back of the horns; the forehead padded for protection, and ropes bound around to make the yoke fast. This would be a capital rig for cattle engaged in logging—especially when bringing up against a stump or other obstruction. In our opinion, this coupling of cattle by the horns, for the purpose of securing the strength of the neck, is an absurdity, and would be so pronounced by the poor beasts themselves had they a voice in the matter. Freedom of the head and neck, while working, is quite as essential to quadrupeds as to bipeds, and from neither can a full development of strength be obtained if this freedom is hampered or restrained.

Comparative Yield of Potatoes.

C. R. WILSON, Tioga Co., Pa., writes the Prairie Farmer, Philadelphia, on the comparative productiveness of three varieties of potatoes which he tested the past season. There were sent to him, from Ohio, two Harrison, three Early Sebec, and eight Early Goodrich potatoes. These were cut to single eyes and planted in drills eighteen inches apart in garden soil. They were dug in September. The Sebec yielded a bushel; the Goodrich gave five bushels and the Harrison about two and a half bushels. About half the Sebec died out after having made a considerable growth. Two bushels of the Gleason were planted as an experiment, cut like the others, and produced about forty-nine bushels or nearly twenty-five to one.

Rural Notes and Items.

DEATH OF WILLIAM GARBUTT.—One of the most painful duties which ever devolved upon us as a journalist is discharged in announcing the decease of WILLIAM GARBUTT, Esq., who died at his residence in Wheatland, this county, on the 22d ultimo, at the advanced age of 81 years. For half a century Mr. GARBUTT has been widely known as a prominent farmer and influential friend and promoter of Agricultural Improvement, and this notice of his death will be read with profound regret by many of our readers, near and distant. We feel his loss deeply, for he was a true friend and wise counselor for many years—first as an able contributor, ardent supporter and judicious adviser while we published the GENESEE FARMER, and the same after we started this journal and until the time of his decease. His influence for good was widespread, and will be long felt. In an obituary notice of Mr. GARBUTT, a city contemporary says that with his older brothers, JOHN and PHILIP, he settled in Wheatland in 1793, in a locality now and long known as Garbuttsville, and truly adds:—"The intelligence and enterprise of the brothers GARBUTT caused them to be widely known and respected. They did much to promote general intelligence among the people, and WILLIAM GARBUTT devoted much time to reading and study, which he continued till near the close of his life. He wrote much for publication upon agricultural subjects, and his articles were widely read and appreciated, and exerted an important influence in creating an interest in improved methods of farming. The theories he promulgated were practically demonstrated upon his own farm. He took great interest in the improvement of farm stock, and was among the earliest in Western New York to bring into the country some of the improved breeds, which made the Genesee Valley noted for its fine cattle. It is such praiseworthy efforts as these to benefit community that cause us to respect the early pioneers of Western New York. They struggled hard to diffuse intelligence among the early settlers and to develop the country, and among the most active and efficient was WILLIAM GARBUTT, who has now gone to his reward—to the reward of those who do well on the earth."

—Our last visit to Mr. GARBUTT was made about a year ago, in company with his and our venerable and esteemed friend, LYMAN B. LANGWORTHY, Esq., (who, though an octogenarian, still retains his mental and physical faculties remarkably, and is among our most valued contributors and advisers,) and well do we remember the interest with which we listened to his experience as a pioneer, and the mournful sadness of his farewell—which proved, as he predicted, our final parting on earth. He has "gone before," leaving an unblemished record as a Christian and Citizen.

A DOUBLE CLUB.—At Claridon (Ohio) the farmers got up a club for the discussion of agricultural subjects, when their wives followed suit and instituted one for themselves. Their meetings are held in one building, but in separate apartments, on the same evenings. The men chat away about farming, and the women concerning household affairs, deportment and morals, and the means best adopted to secure good results in each department. This arrangement will most probably carry the men folk home "on time," as they will be compelled to give their better halves the benefit of an escort after having concluded their agricultural discussions. There is one drawback to the system—the possible demoralization of the young people at home, when the supervising eye of the mother is withdrawn from them.

A SUDDEN CONVERSION.—"An Ontario Co. Sheep Breeder" wishes us to note the sudden conversion to the sheep faith of an agricultural journal (published not a thousand miles from Albany,) which has been wont to pitch into our State Sheep Breeders' and Wool Growers' Association—for that whereas it has deserted the Short-Horns by inaugurating the genus Aries (commencing with the *Merino!*) as the corner stones of its show-bill for 1868! When will wonders cease, and what *will* Mrs GRUNDY say?

EXPERIMENTAL FARM.—The Trustees of the Pennsylvania Agricultural College have decided to locate the Experimental College Farm in the county of Chester, provided the citizens thereof will give five thousand dollars as a bonus for this mark of preference. The Germantown Telegraph thinks this will please the Chester county people, but hints that unless the managers of the farm are wide awake they will be excelled in products and management by many of the farmers in that county.

NOTES FROM WISCONSIN.—L. L. F. writes from Dodge Co., Nov. 24, thus:—"Very fine weather all the fall. Temperature moderate. 'Dry as a toper!' Wells are now being dug and drilled over for the second time this season. One-half or two-thirds of the wells dry enough for a powder house. We had some very fine showers last night, and water stands on the street. The good women are rejoicing over the re-filling of their rain barrels and cisterns. Fall plowing and work well along."

HOW TO BURN COAL.—Most people err in using coal by putting too much in the grate at once. Fill about half full and let it burn well down, and then, without stirring the other, put in a small quantity more. As this ignites, make another small addition, throwing the damper back for a draft. When well on fire, shake out the ashes, and the fire will be as good as new, and much coal be saved.

GRAIN DRILLS, &C., FOR THE SOUTH.—"North Carolina Subscriber" (and all other Southern subscribers interested) can procure a good grain drill on application to Mr. W. L. BUCKINGHAM, 59½ So. Charles St., Baltimore, Md. Mr. B. sells a superior drill, and can also furnish (or give information about) other valuable machines and implements. He is an enterprising and reliable business man.

COMMISSIONER OF AGRICULTURE.—The Senate has confirmed the nomination of Col. HORACE CAPRON of Illinois, as Commissioner of Agriculture. It is to be hoped that the Department and the Agricultural public will be benefited by this confirmation.

"THE PHILOSOPHY OF HOUSEKEEPING."—In noticing this excellent work, two weeks ago, we stated it to be for sale by booksellers generally, but since learn that it is sold only by canvassing agents, and cheerfully make the correction.

MANY ADVERTISEMENTS intended for this number of the RURAL are necessarily deferred. Advertisers are again reminded that the space allotted them is limited, and that we do the best we can without infringing upon the rights of subscribers.

WINTER was properly inaugurated in this region,—with a snow storm, piercing blasts, and a frigid temperature as appropriate accompaniments.

HORTICULTURAL.

ROOT AND STOCK GRAFTING.

THERE is strong dissatisfaction in many localities against propagating varieties of the apple by root grafting, which is the method almost universally practiced by nurserymen to get up their stocks. If the planter were to raise his own trees it would probably be preferable to grow seedlings and graft the stock or top, and this plan might be adopted, we think, with very good results. There would then be no cause of complaint against "tree peddlers" and dishonest nurserymen, and the fruit grower would often save both time and money by thus producing his own trees. Dr. WARDER, in his work on apples, sums up the case as follows:

Much discussion has been had upon the merits and de-merits, or disadvantages of root grafting, and much theoretical argument has been brought against the practice; but beautiful trees are thus made in immense numbers in the extensive nurseries of our country, and until better arguments can be produced against the practice, nurserymen will continue to graft on sections of root such varieties as are suitable for this procedure—especially apples, in a large proportion of the varieties cultivated, some, pears, some peaches, grapes, and other fruits.

Root grafting is now of almost universal application with the apple. It has many advantages, which may be summed up as follows: Two or more plants may be produced from the root of one stock; these may be made with great rapidity; the work may all be performed in-doors and during the whole winter season, when nothing can be done outside; they are of small bulk, and great numbers may be stowed away in little space; they may be transported to any distance in this condition, and are ready for planting with the opening of spring, when they may be set in the nursery rows at once; or, they may be bedded out in small space and mulched, to protect them from drouth, and the weeds can easily be kept under. Another advantage of bedding out the root-grafts is, that they may be assorted according to their size the next season, when transplanted into the nursery rows. This very transplanting, too, is a great advantage, for the roots will be much improved by the process.

The theoretical objections to root grafts have yielded to sound philosophy, based on and supported by practical observation. The very many advantages of this more economical and convenient and agreeable process will necessarily sustain root-grafting in this fast age, when so many millions of trees are needed for the rapidly extending wants of this nation of tree planters. We may, however, consider some of the practical objections which have been brought forward against this plan of multiplying the apple. In our very changeable climate, and particularly in the Northwest, upon the prairies, the cold of winter often supervenes with great suddenness, after the young trees have made a prolonged and vigorous growth in the fertile soil, and produces terrible devastation among those that are there exposed, without protection of any kind, to the rude blasts of the storm-king; in a less degree, injury is very frequent with many such late-growing kinds, at the first access of a severe frost; this is manifested in the bursting of the bark near the base of the stem. The same thing is not so often seen in the same varieties, when they have been budded or stock grafted a foot or more from the ground upon hardy seedling stocks, hence judicious propagators have selected the "tender" varieties for this kind of working, and confine their root-grafting to those less liable to the injury. There are other varieties which do not readily and promptly form a strong, upright growth, so as to be profitable trees to the nurseryman if root grafted; these are selected for stock working, either on strong seedlings, or upon hardy upright sorts that have been root grafted for the purpose of being thus double-worked. This plan has been pursued to a limited extent only, but its advantages in the production of good trees of the slender growing varieties, begin to be appreciated, and as the demand increases, our intelligent nurserymen will very soon furnish the requisite supply.

APPLE TREES IN NEW ENGLAND AND EASTERN NEW YORK.

Is not your inference from my remarks on the nursery traffic "far too sweeping?" Certainly it includes more than the writer ever intended. Of course proprietors of "established nurseries of reputation" intend to deal fairly; and nothing in my remarks implies that there are not such in Western New York. But the difficulty is to know them, and bring farmers into communication with them. For it is insisted that their number is much smaller than it ought to be, or that they are not truly represented by agents or pretended agents. The Springfield Republican was quoted to show that the evil is wide-spread and damaging both to the farmers and the honorable nurserymen. It ought to be abated for the sake of both classes.

It does not consist mainly or wholly in misnaming a few trees. This, though a common, is not a very serious fault. It is a more objectionable and more common trick for dealers to palm off inferior kinds of fruit for that which has been ordered or promised. There are scarcely more than half a dozen kinds of apples that are profitable for eastern farmers to cultivate; yet on the plea that better varieties are sent than they ordered, they often do not receive one of those best adapted to their soil and climate. The Newtown Pippin is one of the best of apples; but it is almost useless to attempt to cultivate it in this region or in the larger portion of New England. But a more grievous fault is that poor, unthrifty trees, grown prematurely old, are sold for good ones, and valuable trees are often fatally injured by the length of time taken in transportation, sale and distribution.

To "order direct from reputable, reliable nurserymen" is doubtless "the best way." Even if the buyer does not know who is the most reliable, it is better than to buy of agents, for it would give him a chance to hold somebody responsible for fair dealing. In addition to this, he should make selection from such varieties as are known to do well on his soil and climate; and then insist on having his orders filled precisely as he sends them,—not allowing the nurserymen, as they sometimes request, to substitute others for them. Above all, let him see that they are sent by express, and not as freight,—at least if they are to come east of the Hudson river. It is well known that freight is delayed for weeks at Albany, both in the autumn and spring; and fruit trees are no exception. It is probable that one-half of the trees ordered through agents are seriously injured by delay in transportation and distribution. No one east of the Hudson river should hesitate a moment at paying the extra expense of transportation by express. My own experience is this: Of a lot of pear trees received from Rochester by express, and set out in the autumn, not one in ten died; of a lot received a year and a half afterwards as freight, and set out in the spring, not one-half ever showed any signs of life. On inquiry, I found the latter had been delayed more than two weeks on the road; and to this fact I attribute their want of vitality.—E. M. R.

CANBY'S AUGUST GRAPE.

MANY consider this variety identical with the York Madeira and Hyde's Eliza. The bunch is compact, generally shouldered; the berry medium, round and black, it is juicy and of a pleasant flavor. The vine is hardy, in some localities productive and in others not. It ripens in this latitude about the last of August. There is little pulp in the berry. This grape has never been prominent, nor is it of great or particular value for market or wine making—many other varieties being superior; yet it is desirable for a collection and usually gives satisfaction in the garden. It is said to have been introduced by CHARLES CANBY, Wilmington, Del.

HORTICULTURAL GLEANINGS.

Thornless Gooseberry.—The Billiard Gooseberry is a French fruit of good quality, the bush rather a slow grower, but without thorns.

Forcing Lilacs.—For the Paris market alone lilacs are forced to bloom in winter by the hundred thousand. With the necessary heat and not much light, the common lilac blooms white.

Unseasonable Flowering.—Near Lyons, and in other parts of France, the unusually dry season followed by rains, caused the apple, pear and plum trees to flower in great numbers.

The Sweet Potato as a Window Plant.—This is recommended as a plant for the dwelling, on account of the fine green of its leaves. We have seen it now and then in use, and its effect is fine and satisfactory.

Chrysanthemums should be taken in as soon as the frost interferes with their blooms, and put in sand in a cellar. Much complaint is made of their destruction during the winter, which it is believed is caused by mice, as all the protection given them seems useless.

Gladiolus bulbs also should be taken up and buried in sand where mice cannot attack them, as they are particularly fond of feeding upon them and will leave scarce a trace of them behind where they have full play. Beside, these bulbs will not stand the severe temperature of winter.

Apricot Growing.—The apricot tree when young is a rapid grower, and if left to itself will produce long, naked branches, in consequence of its growing only from the terminating buds, and those near the top of each year's growth, leaving the lateral branches and fruit spurs feeble. In order to obviate this and develope the fruit wood all through the tree, there should be only branches enough to form a nice, open head, and these shortened every season.

Peach Orchards—Cultivation.—In New Jersey it is customary to plant the ground of a peach orchard to corn till the trees commence bearing, when the cropping is discontinued and the soil simply plowed and harrowed. It is not the cropping that deteriorates the peach orchards, once so prominent a feature in farm husbandry in Western New York, but the severity of the winter season. Frost does for the peach here now what neither cropping nor neglect could accomplish twenty-five years since.

The Peach Crop in Michigan.—A correspondent at St. Joseph, Mich., under date of October 26, 1867, writes:—"It may not be uninteresting to your readers to learn an item in regard to our late peach crop. By the books at the Custom House in this place there have been shipped from this post this season 325,211 baskets and boxes of peaches. They sold from 60 cents to $1.50 per basket. Fruits of all other varieties have been extensively grown, including grapes to the amount of between forty and fifty tons."

The Taylor Grape.—GEORGE HUSMAN, Hermann, Mo., says the Taylor grape "makes one of the best, if not *the* best, white wines we as yet have, not even excepting the Delaware. It is easy to propagate, as almost every eye grows, and it is a most rampant and luxuriant grower. It blooms profusely but often sets imperfectly, and thus its produce is not always satisfactory; last season it suffered some from rot." It wants plenty of room, long pruning, and some other vine should be planted along with it to impregnate the blossoms. The Clinton, Golden Clinton and Huntington are recommended as desirable varieties to mix with it in the vineyard.

Transplanting Forest Trees.—A Western member of the Institute Farmers' Club, J. L. COULSON, New York, recently stated his practice in planting out forest trees. In the month of January, 1847, he took up and planted out 51 water oaks in his yard, 47 of which lived and grew finely. The next year 167 were planted, of which 131 grew. A sample lot of 17 were measured this fall and gave an average of 53 inches in circumference. The process of planting is thus described:—"I dug the holes four feet square, two feet deep; I went to the woods and dug up trees about 8 and 10 feet high, about the size of an ordinary man's wrist. I took up no earth with them; I trimmed the roots off to about 12 to 18 inches; I cut off every branch to about 6 inches, but was careful not to *cut* or touch the center or *pointer*, which, in my judgment, should always be left if you wish a handsome tree or quick growth. I filled in the hole with the earth dug out, and I put it in as firm as before it was spaded out, and had the ground moistened around the roots, packing closely, and finished by filling in with dry earth. The rule is to cut off the branches to within 6 inches of the body to correspond with shortened roots, while the earth next the roots should be made into mortar, and the air kept out. I think all roads should be lined with trees.

OSAGE ORANGE CUTTINGS.—Will cuttings of the Osage Orange grow readily enough to make that kind of propagation profitable?

PROFITS OF STRAWBERRY CULTURE.

THE Oneida communists have a colony near Wallingford, in Connecticut, where, among other industries, they cultivate small fruits. In a late number of their Circular they communicate the results of their strawberry crop this year. We extract this account, which will interest many farmers near the great cities. The Circular says:

"The amount of land in strawberries this season was nine acres and a quarter. Of this land four and a quarter acres bore its first crop; and a little more than four acres yielded its second crop; and the remainder, a little less than one acre, gave its third crop. The entire crop amounted to 20,825 quarts, or 932 bushels—a yield equal to 100 bushels per acre. Considering how favorable the season has been, this crop should not be called a first-rate one. We attribute our comparative failure mainly to the poverty of four acres of newly-planted ground. Forty loads of stable manure per acre, with some additions of bone-dust and guano, proved insufficient to bring the plants up to the proper size for great productiveness.

The cost of cultivation was as follows:

The Crop.	Dr.
To team-work and labor,	$836 75
" Manures,	415 62
" Bog-hay and straw for mulch,	378 00
" Interest on capital and taxes,	109 13
Total cost of cultivation,	$1,739 50

The expense of harvesting and marketing was as follows:

The Crop.	Dr.
To cost of picking and marketing,	$846 04
" Freights, traveling and telegrams,	565 50
" Commissions,	279 42
" Team-work,	60 00
" Wear of crates and baskets,	125 00
Total for harvesting and marketing,	$1,875 96
Total cost of crop,	$3,615 46

The returns to be credited are as follows:

The Crop.	Cr.
By 26,961 qts. berries shipped at an average value of 20 cts. ₱ qt.,	$5,392 20
" Berries sold and otherwise disposed of at home,	419 69
" Plants sold,	103 33
Total value of crops,	$5,915 22
Deduct total cost of the same,	3,615 46
Balance of profit,	$2,299 76

These figures are based on the actual showing of our account books, and on the market value of the different items which entered into the production of the crop. Some of these items may seem too great; that of bog-hay and straw for mulch might, perhaps, have been debited at the actual cost of production, as these articles were not actually purchased.

We will now add a few averages derived from the crops of the three past years:

Cost of raising berries in	1865....	5 4-5 cts.	per qt.
" "	1866....	11 "	"
" "	1867....	5 1-2 "	"
" picking and selling in	1865....	5 1-5 "	"
" "	1866....	8 "	"
" "	1867....	6 3-10 "	"
Average price of berries in	1865....	21 "	"
" "	1866....	37 1-2 "	"
" "	1867....	20 "	"

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

PLAIN CAKE.—1 cup sour cream; 1 do. of sugar; 1 teaspoon soda; 1 do. of salt; 1 egg; a few drops of lemon extract. Bake quickly.

RAILROAD CAKE.—1 cup sugar; 1 do. of flour; 4 eggs; ½ teaspoon soda; 1 do. of cream tartar. Beat the eggs and sugar together, then add the other articles. The same may be baked very thin, spread with jelly when cool and roll it up.

LINCOLN CAKE.—2 eggs; 2 cups sugar; ½ do. of butter; 1 do. of milk; 3 do. of flour; 1 teaspoon extract of lemon; 1 do. of cream tartar; ½ do. of soda. Beat the eggs, sugar and milk together, then add the other articles and bake in a quick oven.

SWEET APPLE PICKLES.—Pare nicely the quantity of apples required, and take out the stem and blow end with a sharp pointed knife. Boil them tender in a kettle of sirup prepared in the following manner:—To 1 quart of cider vinegar add 1 pint of sugar, (two quarts will cover a half-bushel of apples,) add spice, cloves and cassia buds to taste. Boil the sirup a few minutes after taking out the apples. Peaches and pears are very nice prepared the same way, except to boil the sirup longer for the latter.

TO DRY CITRON.—Slice and take out the seeds; boil in sirup until transparent; then take out on plates and dry in a moderate oven. —J. M. I.

AMMONIA COOKIES.—1 tablespoon ammonia, dissolved in a cup of sweet milk; 1 cup sugar; ¼ do. of butter; 2 eggs; nutmeg to taste.

RAISIN CAKE.—1 cup buttermilk; 1 do. of brown sugar; 1 do. chopped raisins; 1 egg; butter the size of an egg; 1 teaspoon soda; 1 do. of cloves; 1 do. of cinnamon; 3 cups sifted flour. It improves it to frost it when done.

MOLASSES CAKE WITHOUT EGGS.—1 cup molasses; 1 tablespoon ginger; 2 do. of shortening; then add 1 cup of warm water with 1 teaspoon of saleratus dissolved in it.—ANNA R., *Seneca Falls, N. Y.*

A USEFUL HINT.—A subscriber writes as follows:—"A tin tube made like a syphon, driven into the vent of a barrel of wine or cider, and the other end inserted into a vial of water, will prevent the air from entering the barrel, while the gas escapes through the water. Make the barrel otherwise tight. When the cider or wine in the barrel is done working, the water in the bottle will cease bubbling. It requires no filling up as there is no loss. I have tried it." We will only add that it can be made by any tin-plate worker, and when once made can always be kept for future use.—*Farm and Fireside.*

BRADBURY'S FRESH LAURELS
Is his latest, most popular and splendid music book for Sabbath-schools. The music is new, fresh and very attractive. Hymns—short, earnest, **full of Gospel truth,** and adapted to every occasion. EVERY Sabbath-school must have "LAURELS" sooner or later. The author says:—"I never made a book that was so perfect and at once so popular, and gave such **universal satisfaction.**" Price $45 and $30 per hundred. Send 25 cents for specimen copy.
WM. B. BRADBURY, 425 Broome St., New York.

THE BEST ARE THE CHEAPEST.
THE MASON & HAMLIN CABINET ORGANS have just been awarded a FIRST PRIZE MEDAL at the Grand Exposition in Paris, in competition with instruments from the best makers of all countries. This makes over SEVENTY HIGHEST PREMIUMS awarded them within a few years. Testimonials from more than three hundred of the most prominent musicians in the country that these instruments are unequalled, are published in the circulars of Mason & Hamlin.

Observe that dealers in musical instruments are strongly tempted to recommend as equal to the best, those instruments on which they can make the largest profit. The prices of M. & H. are fixed and invariable. They cannot afford the large discounts made by manufacturers of inferior work, many of whom sell at 40 to 50 per cent. discount.

At the prices at which they are sold, the Mason & Hamlin Organs are believed to be not only the best but the cheapest instruments of their class. Send for a circular, with particulars, to MASON & HAMLIN,
596 Broadway, N. Y., or 154 Tremont St., Boston.

WILLIAM MASON AND E. S. HOADLEY'S New Method for the Pianoforte.
Already a second edition of this new work is ready and nearly sold in advance. It is new in method and matter, embracing modern exercises and expedients not heretofore presented, while its selection of Exercises, Recreations and Pieces, mostly from composers of recognized eminence, is unusually large and very choice.

This is the first instruction book to include the technicals of modern pianoforte playing. It has a full elucidation and illustration of Mr. Mason's new system of Accentual Treatment of Exercises, by which the attention of the pupil is almost compelled, and careless practice is rendered nearly impossible, while not only the hands, but also the mind, taste and artistic perceptions are cultivated and trained.

It is eminently a practical work, the result of long and most successful experience in the actual business of pianoforte teaching. It is carefully progressive, very clear and perspicuous and full in its explanations and directions, illustrated by cuts and diagrams, and is adapted to the use of young beginners as well as those who have made progress. 240 pp., large 4to. Price $4. Two editions are published; one with AMERICAN and one with EUROPEAN FINGERING. Care should be taken to designate which is wanted. Published by
MASON BROTHERS, 596 Broadway, New York.
MASON & HAMLIN, 154 Tremont St., Boston.

SNOWFLAKE.

One Christmas down at Lynton Hall—
  It was so pleasant, I remember—
The hopes and joys I now recall
  Of that cold, bitter, bleak December:
When winter's sky was overcast,
  Or in the bright and frosty weather,
Snowflake and I—those times are past—
  Walked, flirted, danced, or read together!

I called her Snowflake; she looked bright
  As snow fresh fallen in the morning,
Just flushed by kiss of rosy light,
  Of sunny rays when day is dawning:
Her bosom—white like driven snow,
  She seemed as fragile and as tender:
I found—in waltzing, you must know—
  Her foot was light, her waist was slender.

How lovely she appeared that night,
  In sheenlest of gauzy dresses,
With tangled wreath of snow-drops white
  All twining midst her golden tresses!
Round her neck clung orient pearls,
  Which softly shone, yet glimmering brightly;
She quite eclipsed the other girls,
  When floating down the stairs so lightly.

Ah, me! I recollect those hours—
  Since then I've grown a little older—
I found just now some faded flowers,
  Reminding me of all I told her.
And Snowflake? Well, it's rather hard
  For hearts with one another smitten—
But, let me see, I think the Bard
  Says "lovers' vows in snow are written!"

AMERICAN GIRLS.

In our American life the natural dependence of woman upon circumstances is increased by a variety of causes. Here woman has a peculiar delicacy of physical constitution that makes her especially sensitive to external influences, even when in tolerable health, and renders it very difficult for her to keep herself in full health. Whether it is the climate, or our way of living, or whatever may be the cause, the fact is certain that the American girl is a very delicate plant; beautiful, indeed, in comparison with others,—more exquisitely organized than the English and German girl, and more self-relying than the Italian, yet not generally strong in nerve and muscle, and too ready to fade before her true mid-summer has come. The statistics given us by alarmists, on the health of American women, may be too partial, and too exclusively with the dark side of the subject; yet the facts stated cannot be questioned, and if there be a brighter side the dark side must still be recognized. We have heard persons who might be expected to know what they say, declare that they can hardly name a single instance of perfect health among the young women of their acquaintance, and the physicians whom we hear speaking of the subject not seldom lose their patience in setting forth the miseries of feminine invalidism, with its shattered nerves and morbid elrenlations.

If half of what is said is true, it is one-half more than ought to be so; and if our mothers had not been better gifted with maternal faculties than the candidates now ready for the bridal ring, the present number of the native American population could be accounted for only by miracle, not by natural descent.

NO ONE LIKE A MOTHER.

A poor old woman lay upon her sick bed in a close, uncomfortable room, with a daughter and little grandchild to take care of her. But whom do you think this aged woman called for all the time, and longed to have come and nurse her? It was "mother"—her own mother. "O, there's nobody like mother to take care of you when you are sick," she said. A person present asked how long her mother had been dead. "About fifty years, I reckon," she answered.

Do you think you will remember your mother's loving care for fifty years? No doubt you will, if God spares your life. You may think but little of it now, but you will think a great deal of it then. This woman's children and grand-children had grown up about her, but her heart reached back over all that waste of years to the time when she was a child at her mother's side. It was for "mother," "mother," that our poor boys, in tent and hospital, called and prayed, when sick and wounded they were laid down to die. O, there is nobody like a mother in love and care for us. What return are you making every day for all she does for you? Do your feet run willingly to do her bidding, as soon as it is known? Do you try to save her trouble, and lighten all her burdens? O nothing in this world can do it so effectually as to know that her children are growing up good, and noble, and useful in the world.

OUR SPICE BOX.

Few ladies are so modest as to refuse to sit in the lap of luxury.

Why old maids are the most charming of people—Because they are matchless.

Fashionable dresses are short—so are fashionable husbands who pay for them.

An Irishman says he sees no earthly reason why women should not be allowed to become medical men.

An architect proposes to build a "Bachelor's Hall," which will differ from most houses in having no Eves.

The pleasantest husbandry known to man is said to be the destroying of weeds—a widow's weeds, by marrying the widow.

To economise is to draw in as much as possible. The ladies apply this art to their person, and the result is a very small waist.

"What would you be, dearest," said Walter to his sweetheart, "if I was to press the seal of love upon those sealing-wax lips?" "I should be stationary."

A man, boasting in the company of young ladies that he had a luxuriant head of hair, a lady present observed that it was owing to the *mellowness of the soil.*

An insurance agent, urging a citizen to get his life insured, said: "Get your life insured for ten thousand, and then, if you die next week, the widow's heart will sing for joy."

A cynical old bachelor who firmly believes that all women have something to say on all subjects, recently asked a female friend:—"Well, madam, what do *you* hold on this question of female suffrage?" To him the lady responded, calmly: "Sir, I hold my tongue."

Choice Miscellany.

SONG.

BY LEWIS DAYTON BURDICK.

Lives there a man beneath the sun,
  Who never feels from out his heart,
Or through his veins, more quickly run
  The blood stirred by Apollo's art?

Enraptured by thy power, O! Song,
  The patriot arm deals heavier blows,
The weaker Right withstands the Wrong,
  And Grief finds solace for her woes.

Nor cradled babe but owns thy power,
  Nor strongest hearts of sternest men;
And care forgets for one brief hour,
  And hoary age grows young again.

O Song! thine is a work of love,—
  To call from paths that lead astray,
Tell glories of the realms above,
  And cheer men in the shining way.

O! wondrous gift divine! For thee
  Alike the unlettered and the sage
In reverence bow, and bend the knee,
  In every clime, in every age.

Written for Moore's Rural New-Yorker.

RAVELINGS.

BY T. RAVELER.

NO. III.--SOOTHING SIRUPS.

"Mrs. Winslow's Soothing Sirup" is said to be very good "for children teething." I presume it is excellent. Unfortunately when my milk teeth were matriculated Mrs. Winslow hadn't gone into the quackery line. Or if she had, her soothing influence had not extended to the neighborhood in which I first began to make a noise in the world. Consequently I went through with my little matter of developing masticators with no particular solace, except that accruing from the old-fashioned cradle, and the accompanying old-fashioned lullabies. (My aunt is authority for this statement.) Possibly I got along nearly or quite as well as the present generation of babies does. I can't determine as to that. My memory is pretty good, but, really, those first teeth out rank it. They have the advantage of me. I shouldn't know them if I should see them.

I am led to believe that Mrs. Winslow's Sirup is in pretty general use. For babies, of course. I was comparing, not long since, the advantages of the present generation of babyhood over those I enjoyed, and remarked to my aunt Jerusha that babyhood of to-day is ahead, decidedly, in the matter of "jumpers," and the aforementioned "Soothing Sirup." My aunt caught up the last words. There was a touch of maliciousness, I saw first thought, in her rejoinder. It was in her usual caustic vein.

"Don't libel the poor babes," she said. "There's more soothing sirup swallowed by humanity classed as men and women, than there is by the sucklings. Mankind, grown, has a wonderful love for it."

The good woman chose to be sarcastic. Thinking this, I did not, at the moment, weigh her words carefully. Since, however, I have come to the conclusion that there were several grains of genuine truth in what she said. I have looked about among my friends, have scrutinized their characters closely, and have seen that the greatest part of them have, indeed, a remarkable appetite for soothing sirup of some description. They don't take "Mrs. Winslow's"—they don't patronize any one particular preparation—but each has his or her specific to effect similar results. Mrs. W. doesn't monopolize the sirup business, and the babies haven't a full covenant deed to all that is manufactured.

The flesh—our physical system—is heir to a great many ills. We all know that. But human nature—something in the flesh, but distinct from it—is heir to a great many more. We do not stop cutting teeth when we grow out of our pinafores. How much we should be saved if we did! We cut a good many, long afterwards, that are not "wisdom teeth" by any manner of means. And for all these we must have something to restore the tone of our mental philosophy. Soothing sirups, then, seem to be a necessity. We all take them, have taken them, or will take them.

Travel is, I judge, about the most popular soother. It is astonishing how many appear to have faith in its efficacy. In my study of traveling character I have been making it a speciality to determine what proportion of those who are ostensibly off for pleasure, are, in fact, seeking to allay the inflammation caused by cutting a new tooth. The proportion is greater than you would imagine. A disappointment in love has driven many a man to a railway car or a steamboat. Amaranda and Augustus, having completed the short trip they were making when we saw them last, and demonstrated to every one that they are irrecoverably in love, have a "falling out." Whereupon Augustus packs his carpet bag in bitterness of heart, or more likely packs his bitterness of heart in his carpet bag, and goes chasing up and down the country. He drowns his feeling in sherry cobblers and brandy smashes, or tries to; (and generally succeeds,) cannot bear to stop long in any one place; and makes more of a fool of himself generally than we ever knew him to before. Amaranda's sirup, meanwhile, is what every woman resorts to in such an emergency—a flirtation. She would travel if she could, and—if she did not like flirting quite as well. The remedy each tries works a cure.

Now and then you will find a sober, mild-mannered, middle-aged man, whom you know at once has family cares somewhere. Perhaps he is off on business—his family would certainly tell you so. Sound him, and you will find he is seeking "relief"—is taking a dose of the "soothing." I met one yesterday who was frank enough to admit it. I incidentally asked if he was making a business run, and added that I inferred he was, or his family would be with him.

"O, no! I'm only out for a few days' relaxation, and left my family at home *so as to enjoy myself.*"

I italicise the last words, not because he did, but because they nevertheless struck me most forcibly. Possibly his wife is a bit of a termagant. Maybe the youngest child is inclined to be cross, and the family and family druggist are out of "Mrs. Winslow's." Being unable to quiet the baby's nerves, he may have found it necessary to strike out alone to try and soothe his own.

While numerous individuals seek a soothing sirup in traveling, quite a large class stay at home and try a variety of things which they fancy will have a quieting effect.

There's my friend Trotter. He is one of the most uneasy, restless souls you ever saw. He isn't worth anything for business, because of his instability; isn't worth anything to himself, because he cannot satisfy his own mind; and surely isn't worth much to anybody else. He doesn't care for extended travel—cares nothing for new sights or new faces. Except it be the face of a horse. A horse is his soothing sirup. He takes a dose of horse as often as your real whisky lover takes a dose of whisky when it is used "as a medicine." He goes to all the races on the Fashion Course, and on some courses that are not so much in fashion; and, on the whole, makes as big a donkey of himself as any one having so close an affinity to the equine race could be expected to.

Then there's Sellam. He bears a good character; is very moral, and a strict churchman. He is in the mercantile line, and does a thriving business. He is not dishonest—indeed he is considered by people generally to be a model of uprightness. But he is human, and sells below cost often, ("seeing it's you,") and makes twenty-five per cent. clean profit. He is human, and he has a conscience; and "conscience doth make cowards of us all." Conscience must be quieted; the little business this which he occasionally indulges in must be glozed over. So the church is the soothing sirup which he administers to conscience as a soporific. He takes it with commendable regularity. Every Sunday he is in his pew, and responds to all the collections without a grimace. In all the church enterprises he is a leader. For every work in which his society is concerned, and which needs zeal and energy in its prosecution, Sellam is the man. Swallowing his sirup has become almost a habit with him, and he finds it not so bad to take.

Byam is his cousin. Byam isn't a hard man. He ranks equally with Sellam in social status and popular opinion. He lives well—very well. He likes to be considered liberal. In fact, he makes a point of liberality—when liberality really makes a point for him. His gifts are not intended to be ostentatious, but people will make a parade about them. It is heralded far and wide that Byam has made magnificent donations to such and such institutions. Finally Byam builds a Public Library, or perhaps endows a College. How grandly generous! Byam's name is cut in a marble tablet, (before his death, of course, posthumous recognition would scarcely satisfy,) and placed in the splendid structure. Everywhere his philanthropy is blazoned. The good public never once imagines, it is presumed, that philanthropy is his soothing sirup. But let me assure you, privately, that such is the painful fact. Byam speculates. He doesn't gamble. He intends to give a full equivalent for what he purchases, certainly. Perhaps he deceives the value of whatever he invests in—possibly it isn't worth any more at the time than he pays for it. Be that as it may, soon after it is in his hands there's a rise in the market. Prices go up. He realizes largely. His speculations improve his pocket, but impair his conscience. It gets neuralgic. Occasionally there is a twinge there. Like Sellam, he needs a "soother." Then comes the happy idea of the public good. Result—the edifice before mentioned, and the marble tablet. His soothing sirup is sweet; he rather likes it. It isn't quite a cure, but its a capital preventive; and Byam continues in his winning business of depressing and raising the markets. He's done a great thing, *pro bono publico*, and may be pardoned for driving particularly sharp bargains until death overreaches him.

Every ill which flesh, no, human nature is heir to, has its opiate. Wounded pride, slighted affections, blighted hopes, hopeless ambitions, and all the *et cetera* of things realized and not realized, are very disagreeable, to be sure. But we soon learn to apply the opiates, and sugar-coat them to suit ourselves. A very lugubrious life we should lead, if it were not so. Though Aunt Jerusha sneered because mankind love soothing sirups, I am constrained to believe that the instinctive love for them is one of the wisest provisions in our animal economy. Water is one of the essentials to a duck's existence. If he had not an instinctive love for it, his life would be but a very dry, practical joke. At least so he would consider it if he was considerate. Soporific influences are essential to humanity. Therefore the love for them is a happy ordination.

Tacitus says, "In the early ages, man lived a life of innocence and simplicity." The first woman went astray; the very first man that was born in the world killed the second. When did the time of simplicity begin?"

Luck lies in bed, and wishes the postman would bring him the news of a legacy. Labor turns out at six o'clock, and, with busy pen or ringing hammer, lays the foundation of a competence.

It is an extraordinary fact that when people come to what is called high words, they generally use low language.

Sabbath Reading.

ONE STEP MORE.

What though before me it is dark,
  Too dark for me to see?
I ask but light for one step more;
  'Tis quite enough for me.

Each little humble step I take.
  The gloom clears from the next;
So though 'tis very dark beyond,
  I never am perplexed.

And if sometimes the mist hangs close,
  So close I fear to stray,
Patient I wait a little while,
  And soon it clears away.

I would not see my future path,
  For mercy veils it so;
My present steps might harder be
  Did I the future know.

It may be that my path is rough,
  Thorny and hard and steep;
And, knowing this, my strength might fail,
  Through fear and terror deep.

It may be that it winds along
  A smooth and flowery way;
But seeing this I might despise
  The journey of to-day.

Perhaps my path is very short,
  My journey nearly done,
And I might tremble at the thought
  Of ending it too soon.

Or, if I saw a weary length
  Of road that I must wend,
Fainting, I'd think, "My feeble powers
  Will fail me ere the end."

And so I do not wish to see
  My journey or its length;
Assured that through my Father's love,
  Each step will bring its strength.

Thus step by step I onward go,
  Not looking far before;
Trusting that I shall always have
  Light for just "one step more."

[British Messenger.

Written for Moore's Rural New-Yorker.

ARE WE DOING WHAT WE CAN?

"Brethren and friends, when standing at the Judgment bar of God will you feel that you did what you could?" asked a minister of the Gospel not long since.

Oh, what a thought! At that hour the whole of our lives, whether good or bad, will rise up before us so distinctly that we shall stand appalled, wishing, indeed, that the rocks might fall upon and hide us from the awful sight.

Reader, have you contemplated that hour, when you will see yourselves as you are—when, by the light of God's countenance, your own insignificance will appear before you, and you will shrink with alarm from the presence of the great I am? Fellow Christian, will you feel, when called to answer to the demands made of you, that you did *all* you could? that no stone was left unturned by you to help reform the world? Are you doing what you can? Does each day find you a faithful worker in the vineyard of Christ? Is some one made the better or happier through your means? Have you spoken a word to-day of the love of God to some weary, care-worn pilgrim, or kindly invited a down-trodden sinner to find the better way? Have you given a cheering look to a toiling laborer, letting him know that he is a man among men? or a smile to the little child who is striving with his weak might to make his way through the world?

Oh! these flowers by the wayside! These little things—how great they are! For Christ said, "And whosoever shall give to drink unto one of these little ones a cup of cold water only, in the name of a disciple, verily I say unto you, he shall in no wise lose his reward."

Shall we not be up and doing—while it is called to-day—doing something for the kingdom of God? Shall we not look about us and find what we may do, not out in the world among the famed and talented, but where Christ worked, amidst the lowly ones of earth?

Mrs. Hulburt.

ORDERED TO THE FRONT.

Bishop Ames, at the re-union of the Indiana Conference, told this touching story:

A General in the late war told me not long since, that among the troops that were under his command was a youth, hardly more than fifteen years of age, who was taken violently sick; and the boys belonging to his company sympathized with him—his mother was a poor widow, living in Southern Illinois—they saw the little fellow growing weaker and worse, and so they made up a purse and sent for his mother to come and see her soldier-boy die. She came. He was fast sinking. The General sympathized with him and visited him frequently. He came in one morning—the mother was sitting by her son's bedside and singing:

"Jesus can make a dying bed
  Feel soft as downy pillows are."

The General listened till she had finished, and then came forward, took him by the hand, and said, "How are you this morning, John?"

Said the dying boy, "Not very well, General—*I am ordered to the front!*" and to the front he went. Angels came down to conduct him to the realms of glory. When God is ready to order us to the front, I trust we will be, like the soldier boy, ready to march at a moment's warning.

Inwrought prayer, that hath a spirit in it, carrieth all before it—nothing can bind or hold it from prevailing.

Prayer is, as it were, a battle fought in heaven, not in wrath or revenge, but with faith and holy submission.

The Reviewer.

HOME FAIRY TALES. By JEAN MACE, Editor of the *Magasin d' Education*, Author of "The Story of a Mouthful of Bread," etc., etc. Translated by MARY L. BOOTH, Translator of "Martin's History of France," "Laboulaye's Fairy Book," etc., etc. With Engravings. [12 mo., pp. 304.] New York: Harper & Brothers.

THE youth of our country are greatly indebted to Miss BOOTH for amusement and profit. She gave them LABOULAYE'S Fairy Tales; and now she takes the charming little creations of JEAN MACE from their foreign dress, and sends them out in a garb which our children can understand. We cannot better express our commendation of the book than to endorse what is said in the translator's preface: "The fairies here are good fairies—home fairies—each of whom has a mission to correct some childish fault, but who does her work so attractively and unobtrusively that the children for whom it is designed never think of rebelling against the moral which it is sought to convey." STEELE & AVERY.

HARPER'S BAZAR. A Repository of Fashion, Pleasure and Instruction. New York: Harper & Bros.

WHEN the HARPERS announced their intention of issuing a weekly journal of Fashion, the public had a right to expect that the new candidate for favor would eclipse all others of the kind. The known excellence of all their publications was a pledge of this. Five numbers of the Bazar have appeared, and public expectation is in them more than realized. Hereafter the Bazar will be the standard in its sphere. It is of the same size and form as Harper's Weekly, and gives an almost endless variety of fashion plates, engraved and printed in the best style of the art. In the last number there are *forty-five* designs for different articles of dress, crochet work, &c., beside many illustrations of literary matter. The literary department is conducted with ability and good taste, thus making the paper in all respects an excellent journal for the home. Any ladies in the country can have the first six numbers sent to them free of charge, as specimens, by addressing the Publishers.

ORIGIN, RISE AND PROGRESS OF MORMONISM. Biography of its Founders, and History of its Church. Personal Remembrances and Historical Collections hitherto Unwritten. By POMEROY TUCKER, Palmyra, N. Y. [12 mo., pp. 302.] New York: D. Appleton & Co.

THE story of Mormonism constitutes one of the most curious chapters in our country's history, and anything tending to make it more complete will be received with favor. This work is intended to fill up many blanks in the strange tale, and contains interesting facts and reminiscences of the early years of JOSEPH SMITH, based upon the author's personal knowledge and information, as also a succinct account of the growth of Mormonism to its present assumed dignity as a newly-revealed gospel dispensation. From it we learn (what was pretty well known before, however,) that the Mormon Church was conceived in blasphemous trickery, and has been developed and strengthened by crafty domination. Sold by ADAMS & ELLIS.

AMONG THE INDIANS. Eight years in the Far West; 1858–1866. Embracing Sketches of Montana and Salt Lake. By HENRY A. BOLLER. [12 mo., pp. 428.] Philadelphia: T. Ellwood Zell.

HERE is a pleasant narrative of life among the uncivilized tribes inhabiting a part of that region just this side the Rocky Mountains. The writer's headquarters were long time at Fort Atkinson, then a remote station of the American Fur Company, and in the heart of the Indian country. He enters into no disquisition on the character of the red man—does not attempt to picture him as either a fiend or the noblest of mankind—but tells, in an easy style, of his buffalo hunts, his feasts, his "medicines," &c., and shows him as he really is. The last chapter is devoted to the Indian Question, which is very sensibly and humanely treated of. For sale by Booksellers generally.

LIVES OF THE QUEENS OF ENGLAND. From the Norman Conquest. By AGNES STRICKLAND, Author of "Lives of the Queens of Scotland." Abridged by the Author. Revised and Edited by CAROLINE G. PARKER. [16 mo., pp. 675.] New York: Harper & Brothers.

THIS is an abridgment of a work numbering several volumes, bearing the same general title, and contains everything necessary to render the study of Queenly lives pleasing and instructive. The forty biographies given, beginning with MATILDA, wife of WILLIAM THE CONQUEROR, and including Queen VICTORIA, comprise a complete domestic history of England from the Norman Conquest to the death of Queen ELIZABETH, and of Great Britain from the accession of JAMES I down to the present time, carefully chronologized. The book is finely gotten up, and is handsomely illustrated with numerous portraits, &c. For sale by STEELE & AVERY.

DR. WILMER'S LOVE; OR, A QUESTION OF CONSCIENCE. A novel. By MARGARET LEE, Author of "Arnold's Choice." [12 mo.—pp. 416.] New York: D. Appleton & Co.

A GENUINE love story, told in the first person singular. It is intensely interesting, but depends mainly for its effect upon a series of stirring incidents. It is superficial, merely, and displays no very great literary ability. Duplicity is discovered and unmasked; a young girl, the victim of base guardians, is rescued from their evil designs; unhappiness follows an ill-starred marriage; the unworthy husband dies, and Dr. WILMER'S love finally makes glad his later days. Sold by ADAMS & ELLIS.

POEMS OF FAITH, HOPE AND LOVE. By PHŒBE CARY. New York: Hurd & Houghton.

THIS beautiful volume, numbering 249 pages, will please a large class of readers who love poetry as an interpreter of the heart's most common, yet sweetest and tenderest emotions. Faith, hope and love are a trinity almost sacred—blessing humanity the world over—and whoever sings of them sweetly and gracefully, as Miss CARY does, will find very many willing listeners. She has not the highest gifts of poesy, and much of her verse is quite commonplace, but she touches the popular sentiment, and frequently with pathetic tenderness. Sold by D. M. DEWEY.

WORKS OF CHARLES DICKENS. Globe Edition. Our Mutual Friend. Four volumes in one. New York: Hurd & Houghton. 1867.

THIS is a long story and a good one—told in that genial and entertaining way characteristic of this voluminous author. This edition of the Mutual Friend cannot fail of receiving a hearty welcome from the public. For sale by D. M. DEWEY.

UNITED STATES MUSICAL REVIEW. New York: J. L. Peters.

THREE numbers of this very large and well arranged journal have appeared. It is in quarto form, of 32 pages, finely printed, and contains much interesting reading matter, together with several pages of vocal and instrumental music. It is worthy an extensive circulation.

MONTICELLO, THE HOME OF JEFFERSON, NEAR CHARLOTTESVILLE, VIRGINIA.

MONTICELLO, the home of JEFFERSON, near Charlottesville, is located on the crest of a mountain, the view from which is so quietly beautiful that JEFFERSON called it the "Heavenly Mount." He made this retreat his resting-place after the fatigues of public life. The mansion is fast going to decay; portions of it are in an extremely dilapidated condition. The present occupant charge visitors twenty cents for admission to the premises. The people of Charlottesville certainly can not be held responsible for the ruinous aspect of the home of the author of the Declaration of American Independence; "for," says our artist, "we have not during our journeyings seen a more respectable and industrious community."

Various Topics.

TO AMERICAN DRINKERS.

IN the present agitation of the liquor question, attention is naturally being paid to the purity of the article dispensed as well as the amount, and the auspices under which it is sold, license or prohibition; and some facts gathered from the trade circulars of respectable dealers offer plentiful food for thought to drinkers. Fine rye whisky that is fit to improve by age needs to be kept from four to twelve years, before it has attained perfection for the drinker's safety. Now it is a well known fact that, owing to the paralysing of business during the war, and the universal introduction of old whiskies throughout the north, east and west, the stock of "rye" of great age was almost utterly used up. The South first sent old whiskies into the northern markets during the war, and as the markets were very soon overstocked, the manufacture was suspended. During all of 1865 and the first three months of 1866, not more than three or four thousand barrels in all of really fine whiskies, fit to receive improvement by age, were manufactured in the United States.

From September, 1862, to January, 1865, during the agitation of the prospective increased rates of excise, a vast amount of whisky was made, and it was evident that the makers paid more attention to the quantity than the quality of their wares. Prominent tradesmen in liquor now avow that all the fine whisky made prior to January, 1865, cannot exceed over six or seven thousand barrels in the whole United States, and two-thirds of this is probably held in Philadelphia. When the tax of $2.00 was put upon whisky in 1865, the country was flooded with cheap and villainous corn whisky, and has been up to the present time. It is impossible to get fine, old whiskies, which are healthy to drink, into market, because the speculators got ahead in 1865, and have kept the inside track. Such, however, is the desire to obtain a good article, that rye whiskies of only six months' age have been sold at an advance of 75 per cent. The traders say that rye whisky of 1865 will soon be a matter of curiosity. "All the pure whisky in America can be contained in 40,000 barrels," and that, according to good authority, is a liberal allowance.

Meantime, the worst forms of adulterated whisky never sold faster and easier. The dealers who own good articles mean to keep them at present, as the stock in the land is so small, and they claim that the demand has for many years been greater than the supply. And are American drinkers to go on absorbing liquids which are the combined essence of filth and slow poison? Plainly—yes—for the voice which cries out for the seductive destruction is powerful.—*Springfield Republican.*

PHOSPHORUS AND CIVILIZATION.

CONSIDER for a moment—every adult human being requires at least four pounds of phosphorus to build up his bony framework, quite apart from the quantities used up in his softer parts. This amount is sequestrated from the earth, and never returns to it. Yet the earth, without phosphates, refuses to grow plants. Think of the millions upon millions of pounds which are drawn away from the primitive stock, and you will understand why vast stretches of Asia Minor are barren, why parts of Sicily, Palestine, Arabia Felix (once so fertile,) and the plains of Babylon are desert. These lands have been robbed of their phosphates. If Egypt still retains her ancient fertility, it is because the annual inundation of the Nile renews the phosphates. Did the barbarians always conquer because they were ignorant? No; but because they were strong. They were truly the "sons of the soil," and of a soil not robbed of its phosphates, like the soil of the old and crowded nations. The civilized Roman trembled at the presence of the gigantic Gaul; but the descendant of that Gaul is so little a giant that he now boasts of his stature when he is five feet six! It was remarked by Pliny that the Romans were rapidly degenerating in stature, and that sons were rarely so tall as their fathers; but he attributed this degeneration to the exhaustion of the vital sap, not knowing that a Liebig would come to proclaim the exhaustion of precious phosphorus.—*Cornhill Magazine.*

COUGHING UP A KNIFE BLADE.

THE Beardstown Illinoisian states the following remarkable case:—"A remarkable effort of nature to relieve the human body of an obstruction, has occurred in this vicinity, which should attract the attention of scientific men. About twelve years since, Mr. James Thompson, a wealthy farmer of this county, was waylaid by ruffians, and in the encounter was stabbed in the back, under the left shoulder blade. He was treated by physicians, and in a short time the wound healed over. A few years since he began to cough, and since that time had all the appearance of a person under the influence of consumption, to such an extent that his friends despaired of his recovery. About three weeks since, in a violent fit of coughing, he threw up a piece of the knife blade with which he was pierced, about one inch and a-half in length, and about half an inch in width. It had passed, during that long interval, from his back into his stomach, through his lungs and upwards through the bronchial tube. A more wonderful freak of nature we have never read in the books. Mr. Thompson is now doing well, and bids fair to live as long as any other man."

BIRDS ROOMING TOGETHER.

IN the month of May, 1862, Waterton, the naturalist, pointed out to a friend three birds' nests within one cavity, viz., the nest of a jackdaw, with five eggs—that of a barn-owl, with three young ones, very near to which (the owl's nest,) were several dead mice and a half-grown rat—and eighteen inches above the nest of the owl, in a little recess, was a redstart's nest, containing six eggs. The barn-owl and the jackdaw must have passed in and out at the same hole, and therefore, in all probability, were on neighborly terms. The redstart might have entered and returned by a small hole a little higher up, and then have descended to its nest; but, at all events, it inhabited the same cavity, all three birds dwelling under the same roof, and, in fact, in one room; we must also remember that this was a voluntary act on the part of each of these birds.

"I shall not ask Jean Jacques Rousseau
If birds confabulate or no;
'Tis clear that they were always able
To hold discourse—at least in fable."

ANECDOTE OF VELPAU.

AN anecdote is told of Velpau, the eminent French surgeon, who died a few years ago. He had successfully performed on a little child five years old, a perilous operation. The mother came to him and said: "Monsieur, my son is saved, and I really know not how to express my gratitude; allow me, however, to present you with this pocket-book, embroidered by my own hands." "Oh! madame," replied Velpau, sharply, "my art is not merely a question of feeling. My life has its requirements, like yours. Dress, even, which is a luxury for you, is necessary for me. Allow me, therefore, to refuse your charming little present, in exchange for a more substantial remuneration." "But, monsieur, what remuneration do you desire? Fix the fee yourself." "Five thousand francs, madame." The lady very quietly opened the pocket-book, which contained ten thousand franc notes, counted out five, and politely handing them over to Velpau, retired.

HAPPINESS.

THE longer I live the more I am convinced that the apothecary is of more importance than Seneca, and that half the unhappiness in the world proceeds from little stoppages, from a ditch choked up, from food passing in the wrong place, from a vexed duodenum or an agitated pylorons. The deception, as practiced upon human creatures, is curious and entertaining. My friend sups late; he eats strong soup, then a lobster, then some tart, and he dilutes these esculent varieties with wine. The next day I call upon him. He is going to sell his house in London and to retire into the country. He is alarmed for his eldest daughter's health. His expenses are hourly increasing, and nothing but a timely retreat can save him from ruin. All this is the lobster; and when over-excited nature has had time to manage this testaceous encumbrance, the daughter recovers, the finances are in good order, and every rural idea effectually excluded from the mind. Exercise without fatigue; generous living without excess; early rising and moderation in sleeping. These are the apothegms of old women; but if they are not attended to, happiness becomes so extremely difficult that very few persons can attain to it. And we may add that from neglecting them arises three-fourths of all our misery.—*Sidney Smith.*

BEARDS AND FRENCH FASHIONS.

A LITTLE book by Mons. Eugene Chapus, published in Paris by Levy Freres, gives an account of the origin of the moustache and what is called the "goatee." When the Moors, the author says, invaded Spain, the Christian population became so intimately blended with them that it was difficult to distinguish between the two. So the Christians let the hair grow in a horizontal line on the upper lip, and allowed that on the lower one to grow downwards, thus producing an appearance resembling a cross, by which they might recognize and render each other assistance.

Speaking of the universality of French fashions, the author tells the following story:—"It had been the custom to send a doll dressed in the extreme of the mode to St. Petersburg once a month, and when the revolution broke out the Russian nobility endeavored to have this doll regarded as neutral, and so to be allowed transit to the Neva. The republicans, however, refused to entertain the proposition, and yet, in spite of all obstacles, more than one beau of Louis XVI's Court devoted himself to the service of conveying the fashionable doll to its destination. Certainly 'Martyrs de la mode.'"

A QUEER FISH.—A remarkable amphibious animal of the seal kind, which was captured at Gillespie's beach, about 100 miles south of Hokitika, New Zealand, by Mr. Kilmartin, is now being exhibited in Melbourne. In appearance it presents a mixture of the dog and the fish. Its head resembles that of an English terrier, except that the ears are merely rudimentary. The body is like a seal's, and the animal propels itself upon land or in water by means of two large flippers in the fore part of its body, and two smaller ones behind. Its tail is about two and a half inches long. The animal shuffles pretty quickly upon the ground, and its motion in the water is produced by rolling over and over, and propelling itself forward after the manner of a screw. Its cry is something like the bark of a dog, but peculiarly shrill.—*Melbourne Age.*

Reading for the Young.

TALKS WITH OUR BOYS AND GIRLS.

BY UNCLE PAUL.

ABOUT TRADING.

WE suppose the fathers and mothers of all our young friends do a little trading, now and then. Perhaps they take some chickens or turkeys into town, and exchange them for something needed at home; maybe they dispose of a few barrels of apples, or possibly a little dried fruit. Last week we heard CHARLIE say that his father had been trading horses, and had made a good trade. We thought then—and we've been thinking about it considerably since—that the boys and girls do more trading than they think for. We spoke of it to CHARLIE, yesterday.

"Why, Uncle PAUL," was the little fellow's answer, "how do we trade? I haven't any horses to swap; and I won't trade my knife, though HENRY EATON *did* want me to, the other day, because you gave it to me; and I think too much of my skates to let *them* go."

It was evident that CHARLIE did not quite understand; he looked puzzled. We suspect that all the rest of our young friends will be very greatly puzzled also, when we tell them, as we told him, that we believe they do pretty nearly as much trading as their parents do. And they will want to know what it is that they trade in. Well, it isn't horses, nor turkeys, nor chickens, nor apples, nor knives, nor skates. Listen and we will tell you what it is.

There is JOHNNY GRAY, he traded his pleasant words and good disposition for wicked oaths, and fretfulness, and naughty ways. Do you think he made a good trade? ALBERT LORING was induced by the temptation of green fields and a new fishing rod to trade his studious habits for those of a truant and idler; GEORGE DEAN grew a little tired of going to Sunday School and traded the hours there for rambles off in the woods; and HERBERT COLE exchanged his evenings at home for views in theatres, barrooms and saloons. Did they all make good trades? ALBERT grew up an ignorant, idle man, and is now wretchedly poor and shiftless; GEORGE became a drunken, worthless youth, and was sent to the penitentiary for stealing; and ALBERT was nearly killed, finally, in a quarrel which took place in one of the saloons he so often went to.

JENNIE DAY was a good little girl, and had been taught to be very careful and neat in every thing. But she got to thinking, after a while, as so many other good girls we fear do, that so much care and neatness was too much trouble. So she let go her carefulness for a little ease, and when she became a woman, and had a home of her own, everything about her was fearfully untidy and dirty. What think you, Girls; did she trade wisely?

There are a great many other trades which we have seen boys and girls make, that we might speak of. But you may get tired, if we talk much longer this time. Try and guess what the others are. Watch your young companions closely, and see if you do not find them making trades every day. Look at yourselves, occasionally, too, for just as like as not you will be doing the same thing. And if you find that you are, ask yourselves very seriously if you are making a good trade. When your parents do any trading they hope to gain somewhat thereby; see to it, if you trade at all, that you do not lose anything.

THOMAS HOOD used to say, "I often wish I was two or three children—but I can't be—and wouldn't I put off my three pairs of shoes and socks, and go paddling in the sea up to my six knees!"

Publisher's Notices.

Send Early!—In order that we may get the names of subscribers in type for mailing machine as fast and early as possible, our freinds are requested to send their lists—or portions of them—as soon as convenient. Those who are forming large clubs can send what they have, and complete their lists afterwards. Many agents keep to work for six months, remitting from time to time; and some after sending for one club form another and get a second or larger premium.

Premium List, Show-Bill, &c.—Our Premiums to Club Agents are more liberal than ever before, but we have not space to give a list of them in the RURAL. Premium Lists, Show-Bills, Specimens, &c., are promptly sent, free, to all applicants. Give us your address, and also that of any friends who may be disposed to form clubs, that you and they may see our offers of "Good Pay for Doing Good."

Our Club Rate.—The lowest Club Rate of the RURAL is $2.50, and if any agents offer it for less they must pay us that price. *Our* rates are invariable, and none are authorized to depart from them—though of course we cannot prevent agents from doing so, or even giving away the paper; that is their business.

Local Club Agents.—We want a live, wide-awake agent for the RURAL in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

How to Remit.—The safest way to remit for the RURAL is by Draft or Post-Office Money Order,—and either of these, if made payable to his order, may be sent at the risk of the Publisher.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., DECEMBER 7, 1867.

NEWS OF THE WEEK.

New York State Items.

THE Constitutional Convention last week considered at much length the report of the Committee on Finance. The section prohibiting the Legislature from loaning the credit of the State to any individual, association or corporation, was taken up. The debate upon it took a wide range with reference to appropriations to railroads and charitable and educational institutions. A substitute for it, offered by Mr. Church, to the effect that neither the credit, money nor property of the State shall in any manner be given or loaned to or in aid of any individual, corporation or association, except for charities and education, was finally adopted, but tabled for a time by a motion to reconsider.

A resolution providing for the removal of the Convention from Albany to New York city, after the first of January, was introduced on the 26th ult., but laid over. There seems little probability that it will complete its work before the Legislature will convene.

Boating upon the canals this fall has been more lively than in many years before, and boatmen have reaped a rich harvest. Throughout all of last week loaded boats were leaving Buffalo for tide water.

A tug boat exploded recently in Buffalo, while lying in the slip, seriously injuring two men.

Randall's Elevator and Novelly Mills at Oswego, owned by Randall Bros., were destroyed by fire on the 25th ult. The schooner Coquette, lying near by, took fire in her rigging, which was destroyed, besides being badly burned on her deck and starboard quarter. The flames also spread to a lumber pile, destroying about 700,000 feet. The elevator was insured for $16,000, and the mill for $4,000, which covers about half the loss.

A disgraceful riot occurred at East New York on the 27th ult. Some firemen, who had been drinking freely, forced their way into a hotel, where a party was held to which they had been refused admittance. The inmates arming themselves with shotguns, the firemen were driven out. In the course of the riot that ensued several of both parties were badly injured.

Thomas Hodge, a gravel train conductor, fell from a car at Poughkeepsie on the 26th ult., and was fatally injured.

An immense mass meeting of citizens took place at the Cooper Institute, New York city, on the evening of the 25th ult., for the purpose of giving expression to feelings of indignation caused by the recent outrages on the rights of American citizens perpetrated by the British Government. Speeches were made by Judge Daly, John Cochrane, Horace Greeley and others.

A funeral procession in behalf of the Fenians who were recently hung in Manchester, England, came off in New York city on Thanksgiving day, and was a most imposing spectacle. About 5,000 Irishmen formed in a long column, four deep, and marched through the main thoroughfares attended by three hearses, each containg a coffin on which was inscribed the name of one of the executed men. The procession halted on Union Square where orations were delivered, extolling the heroism of the martyrs and the cause for which they died.

During the present year up to Wednesday, the 27th ult., there have arrived at the port of New York 228,279 immigrants, 6,459 more than had arrived last year at this time.

Sherwin & Co., though a young firm the heaviest dry goods dealers in New York city, next to A. T. Stewart & Co., have failed.

In the gale last week on the lake the schooner Carthagina, bound from Chicago to Oswego with a cargo of 17,000 bushels of wheat, went ashore near the latter city.

Ely Hall, Elmira, was destroyed by fire on the night of the 29th ult. Loss about $35,000.

Five men were drowned at Dunkirk on the 30th ult., while attempting to land from the Oswego.

From the West.

THREE men entered the First National Bank at Independence, Mo., on the 29th ult., and while one guarded the door the other two rifled the safe and drawers. Wm. McCorry the cashier, and his clerks were then locked up in the vault, where they remained two hours. Stone, McCorry & Co., had just placed their funds in the vault of the National Bank for safe keeping. The amount is not stated.

A gang of horse thieves was recently discovered in Jackson county, Mo., embracing about one hundred men. Five or six of them have been arrested, and one was shot.

On the 25th ult., a young German named Klinger shot his employer, Henry Writter, in the head, then broke Writter's wife's skull, robbed the house of $50, and disappeared and has not yet been discovered. Writter and his wife are not yet dead, but both are in a very critical condition. The cause of the tragedy is not known.

The Northern Indians are still belligerent. A sutler's train, escorted by Lieut. Shirley, with forty men, was recently attacked near Fort Phil. Kearney. Two soldiers were killed. The Indians ran off six wagons and $20,000 worth of goods.

From the South.

THE trial of Jefferson Davis has been postponed until the fourth Wednesday in March. Chief Justice Chase did not appear in Court on the morning of the 26th ult., as expected. All the counsel of Mr. Davis, except Mr. James T. Brady and Hon. William B. Reed, were present.

Major-General W. S. Hancock assumed command of the Fifth Military District on the 29th ult. It is almost certain that the Convention in South Carolina is defeated, as the total vote polled falls short many thousands of the required majority of registered voters.

Immense deposits of valuable phosphates, said to be superior to Peruvian guano, have been discovered in South Carolina along the banks of Ashley River. A company has been formed, backed by Northern capitalists, to utilize the deposits, which consist of animal remains, forming a thick substratum for many miles.

The river packet Idaho blew up at the wharf in New Orleans on the 26th ult., and six men were wounded, two of them mortally. The upper works of the boat were completely ruined.

The boiler at Laman's cotton press in Savannah, Ga., exploded on the 26th ult., killing two negroes and seriously injuring the engineer.

An ordinance has been reported in the Alabama Convention declaring void all marriages between whites and freed people, and requiring the Legislature to provide against such marriages under severe penalties.

In the Louisiana Convention an ordinance has been introduced authorizing the Legislature to establish a system of free schools throughout the State, to be supported by taxation of property, for the benefit of children of all races and colors, without distinction.

From New England.

CHARLES DICKENS arrived in Boston, by the Cuba, on the 19th ult. He was met, off the harbor, by a delegation of literary celebrities on board a small steamer, and welcomed by them to our shores. His first readings are to be given in Boston, and he will proceed from there to New York.

One of the most atrocious murders which ever blackened the annals of crime was committed at Worcester, Mass., on the 15th ult. The victim was Mrs. Laura Shepard, only seventeen years of age, and her assassin her husband, James E. Shepard. They had separated some little time previous, owing to his brutal treatment of her, and she was acting in the capacity of nurse at a neighbor's. Thence Shepard followed her, and shot her through the head with a pistol.

The statue of Edward Everett, by Story, was unveiled on the public garden, Boston, on the morning of the 18th ult. Gov. Andrew was to have delivered the oration, but his death induced the committee to dispense with all public services.

FROM WASHINGTON.—Three reports have been made to the House of Representatives by its Judiciary Committee on the subject of the impeachment of the President. The first, signed by a majority of the Committee, recommends and strongly urges the measure. One minority report is adverse to impeachment, but censures the President for his conduct. Another minority report is also against impeachment. It is said that the effect of the argument and facts, as presented in the majority report, has been to strengthen the convictions of those who have heretofore opposed impeachment.

The Senate has confirmed the following appointments, which have been lying over since the taking of the recess at the July session: Horace Greeley, to be Minister to Austria; A. C. Hunt, Governor of Colorado; Colonel Horace Capron of Illinois, formerly of Maryland, Commissioner of Agriculture.

FROM MEXICO.—Senor Romero and his suit received quite an ovation on landing at Vera Cruz. The body of Maximilian has been delivered to Admiral Tegethoff. It had become badly decomposed. The amnesty proclamation has been issued. It mitigates to a very great extent the punishment of Imperial prisoners. Padre Fischer is still held as a prisoner, although the amnesty proclamation sets Prince Salm Salm free.

FOREIGN.—A Grecian war steamer exploded in the Thames on the 29th ult., and it is thought forty persons perished. The condemned Fenians, Messrs. Allen, Larkin and Gould, were hung in Manchester, Eng., on the 23d ult. Demonstrations of sympathy for them have taken place there and at Cork. At the latter place 20,000 persons followed a splendid catafalque. Admiral Farragut sailed from Lisbon the 28th ult.

BATTLES IN SOUTH AMERICA.—By advices from the seat of war the capture of Pilat by the allied forces is confirmed. The position is said to be important, being situated at the confluence of the Nambucer and Paragnay rivers. The defenders lost two hundred killed and eighty-six prisoners. A heavier battle occurred on October 3rd, near San Solano. A large force of Paraguayans advancing to attack the allied camp was flanked by Brazilian infantry, and then completely defeated by a brilliant charge of the Brazilian cavalry. One Paraguayan division was cut to pieces. Five hundred and thirty-eight dead were found on the ground. Two hundred prisoners, five hundred guns and a large amount of munitions of war were captured. The Brazilian loss was twenty-three killed and sixty wounded.

CENTRAL PACIFIC RAILROAD.—From a circular recently issued by Fisk & Hatch, the financial agents of the Central Pacific Railroad Company, it appears that the ratio of profit on that portion of the road now open for traffic, is nearly eighty-two per cent. of the gross earnings. This is nearly three times the ratio of the best lines in the country, and is without parallel. The gross earnings of the ninety-four miles in working order, for the quarter ending September 30th, were $556,509.30, while the operating expenses were but $101,620.89, leaving a net profit of $454,888.41 in gold.

EXPLOSION.—A terrible glycerine explosion occurred in Bergen, N. J., on the 25th ult. The glycerine was being used for blasting on the Newark and New York Railroad, and exploded in the hands of a workman named Burns. The building which he was in was entirely blown away, with all its inmates, and three houses were wholly shattered and others badly damaged. Nine men were killed, and several others severely injured.

ANOTHER CABLE.—A private firm in New York have contracted to lay a telegraph cable between Cuba and Jamaica and Aspinwall. The Government of New Granada grants exclusive privilege for twenty-five years.

NEWS PARAGRAPHS.

THE hunting grounds of Estill, Madison, and adjoining counties in Kentucky, are said to be swarming with deer, rabbits, partridges, and to contain not a few bears also.

WESTON arrived in Chicago on Thursday, the 28th ult., at eleven o'clock and twenty minutes A. M., winning his wager, and having forty minutes to spare.

AT Montreal, a French newspaper is published for the purpose of advocating Canadian annexation to the United States. A paper with a similar object is also being published in Nova Scotia.

AN illicit distillery in Chicago was so ingeniously arranged that by touching a secret spring the discharge pipes could be made to deliver either high wines or vinegar, always offering the latter to the revenue inspectors.

A MAN took a pistol into Mr. John Blair's blacksmith shop, New York, lately, for repairs. Mr. Blair put the weapon into his forge and it was discharged by the heat. Three balls penetrated Mr. Blair's head, inflicting probably mortal wounds.

BAYARD TAYLOR thinks Duke Ernest II of Saxe-Coburg-Gotha is a good deal more of a man than his brother the dead Prince Albert. Naturally enough, for the duke asked him to dinner and treated him very civilly; his wines were few but delicious, and his cigars the best to be had.

A LETTER from Kingston, Jamaica, gives an account of an attempt by pirates to board the schooner Lucy, from New York, just east of Hayti. Captain Copp, mistrusting the parties whom he saw during the day at a distance, armed his men, and the pirates met with a reception which ended in killing two of their number, if not more, when they pulled away as hastily as possible.

THE name of the Red Sea is derived from portions being covered with red patches, from a few yards to some miles square, composed of microscopic vegetable animalculæ, particularly abundant in the spring, and which dye the water to an intensely blood red.—When not affected by these organic beings, the deep waters are intensely blue, and the shoal water has shades of green.

THE Emperor of Abyssinia, one of the most ferocious and blood-thirsty miscreants in existence, lately made an expedition to the Island of Metrata, and put every inhabitant to death by fire. He then made a trip to Ifag, seized 1,500 peasants, placed them in five large houses, and burned them alive. Having heard that 2,000 of his troops wished to desert, he had them surrounded and their throats cut, the mothers, wives, children and nearest relatives of the men being shot by the soldiery. Two hundred and seventy-five chiefs of districts had their hands and feet cut off, and were left to starve.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Dec. 3, 1867.

GOLD continues rather weak. Sales were made yesterday at 137.

Our local banks have a supply of funds for the legitimate business of their customers. Short paper is preferred, both on account of the yearly January settlements, and also with reference to the uncertainties of the future. Business men will endeavor to collect close on the first of January, and creditors should be prepared to meet their demands. Every debt paid, be it large or small, is so much toward keeping financial affairs in a healthy condition.

The Committee of Ways and Means, it is understood, have unanimously agreed to report a bill for the repeal of the cotton tax. The only question now is as to the time it shall take effect. This year's cotton crop is moving very slowly. The anticipation of the removal of the tax doubtless has an effect to cause delay in shipping.

A resolution was introduced into the House of Representatives, last week, instructing the Committee on Banking and Currency to report a bill providing for the substitution of the existing bank circulation by greenbacks. The resolution passed by a large majority. Such a measure as proposed will not pass both Houses of Congress without a good deal of discussion. There is evidently an anxiety to do something in financial matters, but just what is best few seem to understand. This proposition is regarded in some quarters as postponing indefinitely a return to specie payments. The Financial Bulletin says:—"Such a proposal, of course, implies that the House has no idea of ever returning to specie payments, and that it has made up its mind that we may advantageously drift along in a state of suspension indefinitely."

Some members of Congress do propose to return to specie payments, and at an early day. Senator Morrill has introduced a bill which, among other things, provides that on and after the 4th of July, 1869, the National Banks be required to redeem their notes of the denomination of five dollars and under in coin, when presented, and all over five in either coin or U. S. notes.

We shall keep our readers advised of the various financial operations that may be presented, and present in brief such views as we may have in regard to them. In the coming month we shall see a great variety of financial schemes laid before Congress. We trust the wisest may be adopted.

WOOL.—The wool market has been rather quiet during the past week, and sales have been considerably less than the previous week. The Boston sales foot up 725,000 lbs., at a range of 26@55c. for fleece.

The receipts by eastern commission houses are now very light. Fine wools are very firmly held. The tightness of the money market rather favors buyers.

DRESSED HOGS.—Thanksgiving, with the warm weather of last week, very much restricted business. The weather is now cooler, and a larger business may be anticipated.

The number of hogs sold in Chicago for the last two weeks is unusually large—41,000 were marketed in one day. The western packing business will continue until about the first of January.

WHEAT AND FLOUR.—The eastern market continues depressed, and prices are rather lower. The receipts are fair.

Rochester Wholesale Prices Current.

Special Notices.

A SMART BRIGAND.

THE following incident is said to have occurred recently in Southern Italy: A band of brigands having discovered that a body of regular troops were rapidly advancing upon them up a mountain defile, from which escape was impossible, their chief promptly ordered them to bind him and his lieutenant, and move boldly to meet the troops, with the story that they were villagers who had captured two brigands, whom they were taking to Naples to claim the price set upon their heads. They were unsuspected. The whole band were allowed to pass through the troops, who continued up the defile, to find, after a painful march, how thoroughly they had been outwitted. By the way, a vast amount of entertaining reading about brigands may be found in a most interesting narrative just commenced in FRANK LESLIE'S CHIMNEY CORNER (No. 129), entitled "Pierce Egan's Adventures Among the Brigands," in which the author details his personal experiences when he fell into the hands of these vagabonds while on an attempted pedestrian journey from Naples to Rome. Every copy of No. 129 of the CHIMNEY CORNER is accompanied by a large gift plate on a separate sheet (twenty-eight inches by twenty-two) called "The Monkey's Grip."

WHEATON'S OINTMENT will cure the Itch.
WHEATON'S OINTMENT will cure Salt Rheum.

ESTABLISHED 1861.
THE
GREAT AMERICAN TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to "*collect on delivery.*"

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ₱ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ₱ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ₱ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ₱ lb.
Gunpowder (Green,) $1.25, best $1.50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 26c., 28c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of
THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5613 New York City.

CLUB ORDER.
Edwards, St. Lawrence Co., N. Y., June 3, 1867.
THE GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street, New York.

DEAR SIRS:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige
Your ob't servant, DAVID C. McKEE.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* **Licenses Granted.**

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of
Pulverized Slate and Viscous Matter,
(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.
AS A ROOFING MATERIAL IT STANDS UNRIVALLED.
A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and undecaying.
FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.
The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and
PERFECTLY FIRE-PROOF.
It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

PRINCE & COS. AUTOMATIC ORGANS AND MELODEONS.
Forty thousand are now in use
BUFFALO, N.Y. CHICAGO, ILL.

[Established 1848.] ☞ Consignments solicited.

[The following very expressive poem we find in many of our exchanges, credited to Mrs. Julia Ward Howe. We do not think she claims it. It was written by Owen Meredith—a *nom de plume* thinly veiling the identity of Bulwer Lytton, Jr.—who has produced several volumes of very excellent verse.]

WHOM FIRST WE LOVE.

Whom first we love, you know, we seldom wed.
Time rules us all. And life, indeed, is not,
The thing we planned it out ere hope was dead;
And then we women cannot choose our lot.

Much must be borne which it is hard to bear,
Much given away which it were sweet to keep.
God help us all! who need, indeed, His care;
And yet I know the Shepherd loves His sheep.

My little boy begins to babble now,
Upon my knee his earliest infant prayer;
He has his father's eager eyes, I know,
And they say, too, his mother's sunny hair.

But when he sleeps and smiles upon my knee,
And I can feel his light breath come and go,
I think of one—Heaven help and pity me!
Who loved me, and whom I loved long ago.

Who might have been—ah! what, I dare not think.
We all are changed. God judges for us best.
God help us do our duty, and not shrink,
And trust in Heaven humbly for the rest.

But blame us women not, if some appear
Too cold at times, and some too gay and light;
Some griefs gnaw deep, some woes are hard to bear.
Who knows the past? And who can judge us right?

Ah, were we judged by what we might have been,
And not by what we are—too apt to fall!
My little child—he sleeps and smiles between
These thoughts and me. In Heaven we shall know all.

The Story Teller.

Written for Moore's Rural New-Yorker.

PAID OFF IN HIS OWN COIN.

BY J. T. YARRINGTON.

[Concluded from page 388, last number.]

"Mr. Stuart, I am—really—very much surprised;—why,—I had *no idea*"—

"You had no idea! Of course not," interrupted James Stuart, standing up in anger;—but remember, Miss Gardner, *I am not to be trifled with.*"

"Indeed, Mr. Stuart, I have no intention of trifling with you."

"Then I once more repeat, I love you. Will you be my wife?" and James Stuart stood before Effie Gardner as if he was demanding or compelling instead of soliciting a favor.

Effie sat with her head bowed down, half regretting the part she had been playing in the affair; but, as he finished his remark, and was waiting for her answer, a sudden thought flitted through her designing, scheming brain; yet quickly withholding the old, wicked twinkling in her eyes by their drooping lashes, she held out her hand and answered quietly:

"Yes, James, I will be your wife."

"Why, Effie! *what* have you done?" exclaimed both Anna and Tillie in one breath, as James Stuart took his departure, and Effie joined the other two girls in the next room, where Anna and Tillie had been secreted during the entire colloquy between Mr. James Stuart and Effie Gardner.

"What have *I* done?" repeated Effie. "I have only been fulfilling my promises to you."

"Yes, but we did not tell you to marry him," said Anna.

"Neither do I intend to marry him."

"But Effie, *you* most assuredly said you would become his wife."

"Yes, to be sure I promised him, but I intend to keep my promise with him just about the same as he has kept *his* promises to others in times past; for, tell me candidly, girls, did you not, each of you, expect to be the wife of Mr. James Stuart one day? And, were you not, one or both of you, engaged to him?"

"Yes," answered Annie, "*I* was, I'm very sorry to say, engaged to James Stuart;" and the half-blushing girl looked thoughtfully towards her companions as she made the confession. Then the companionable trio broke out in a hearty laugh at the absurdity of the thing.

"But what has that to do with your promising to marry him?" inquired Tillie, after their mirth had partially subsided.

"It means simply this: James Stuart engaged himself to Anna without the slightest idea of fulfilling his promise, as he was seeking to gain your and my affections at the same time; and now I intend paying him off in his own coin by promising to marry him, and then leaving on our bridal day with some other man,"—and Effie's lips again dimpled roguishly, significant of certain, triumphant success.

"How will you manage to keep your betrothal and intended marriage with Henry Lewis a secret from James Stuart?" asked Tillie.

"O! that's an easy matter. You know of course that I have confided the whole matter to Harry, and it not only met with his entire approbation, but he said he would help us all he could in the furtherance of our project, and in punishing James Stuart for his folly in trifling with the affections of three at a time, and Harry said he deserved to be thwarted in his plans even as he intended to disappoint others. You both are aware that Harry and myself are to be married just six months from to-day, and on that very same day I have promised to become the wife of James Stuart also. I declare, girls, it's too good a joke," and the three laughed most merrily.

After laughing and chatting together for a short time, our three heroines separated with many glowing anticipations of the grand sport they were to have in Mr. James Stuart's descent from "the third heaven of bliss," where he had been so recently elevated by the w[illegible]erful condescension of Miss Effie Gardner.

Six months were silently drifted down [illegible] boundless ocean of time, and the eventful w[illegible]ding day of Effie Gardner arrived; but Ef[illegible] and Henry Lewis were not the only ones w[illegible] were to be made happy on that great day. George Gardner (Effie's brother) and Tillie Parker had concluded they would be joined together too by the matrimonial bonds; and consequently, instead of a single one, there was a double wedding.

The brides were dressed in pure white; only delicate wreaths of orange blossoms rested above their sunny brows, and were twined amid the delicate folds of their misty bridal veils.

After the marriage ceremony had been performed, the bridal parties bade adieu to the few intimate friends who had been invited to be present, and then the two happy couples started off on their wedding tour. The party had been gone but two or three hours, when a barouche and bay team of horses were driven up to the door, and Mr. James Stuart alighted. He ordered his coachman to tie the team securely to the firm iron hitching-post, as they might be obliged to remain for some little time, he said, before all parties would be in readiness to start. As he glanced towards the door he wondered why it was that everything about the house appeared so still and quiet. The blinds on the front side were all carefully closed, and everything in general about the premises denoted gloominess. James Stuart wondered at all this; however, he waited not long in his soliloquizing attitude, but stepped up to the front entrance and gave the door-bell an emphatic pull. The servant waited upon him at the door. Upon inquiry for Miss Effie, he was informed that she was "not at home," but that here was a note which had been left for him; and the note was placed in his hand. Nervously he reached forth his hand, and in faltering tones, repeated the words, "*not at home?*" "By jove! what means this?" The door was closed upon him; he started off down the steps; entered the coach, and ordered his coachman to drive him home again. On his way he tore open the note, which was directed in a hand writing very familiar to him, not Effie's, though, but he recognized it at once as that of Tillie Parker. It read as follows:

"Mr. Stuart:—Your bird has flown with one to whom she has for some time been betrothed. It is to be hoped that you will not take her flight too greatly to heart; but that you will allow the thought to console you that others have in times past been deceived by you, even as you are now deceived by one who pledged herself to be the avenger of those whom you would blight in hope and happiness. Thinking you now sufficiently punished for your ungentlemanly conduct, this whole transaction from beginning to end has been, and forever shall be, for your sake, kept a secret from the outside world, providing you also act well your part by not mentioning to any one the particulars of the unpleasant affair. We sincerely hope and trust that the next time you undertake to court more than one at a time, and in the same locality, you may be more successful. With the very best wishes for your health, happiness and welfare, we remain,

Yours in Sympathy,
Effie, Tillie and Anna."

Anger and dismay were plainly stamped on James Stuart's features, as he finished reading the note—though one thought consoled him, and that was, his intended marriage with Effie had from the beginning of their engagement, six months previous, been kept a secret from all. He wondered, at the time of his plighting his love to Effie, *why* it was that she requested their engagement to be kept an *entire secret* from everybody excepting merely their own families, but now he understood it all. This thought afforded him the greatest consolation, to think that no one outside would know, or ever hear of his being thus duped, and that, too, by a woman.

The changed manner of James Stuart became a wonderment to many who were acquainted with him. He was altogether a different person. The matter of his disappointment was never made known, but always remained a secret with the parties concerned. His old love for Anna Perry died not, and he could not quell the affection he bore for her, notwithstanding the trying circumstances and the fiery ordeal through which he had passed. It was well for both James and Effie that they were never united, because James really loved only Anna Perry, although he tried very hard to keep company with Tillie Parker and Effie Gardner at the same time. Two years afterward, we find James Stuart at the feet of the only girl he really ever loved. Now he fairly worships her—for time has doubly strengthened the enkindling passion—and has sought her heart and hand. And what says Anna, in answer to his proposal? Why, she looks the love she dare not speak in so many words, and simply says, "yes, dear James, I love you, and will be your wife."

If the self-conceit was ever effectually taken out of any poor mortal, James Stuart was that one.

Male flirts, take heed, lest in your wholesale love-making to Mother Eve's fair daughters you meet the lamentable but just fate of being "*paid off in your own coin.*"

[Young ladies of the Rural Circle are wise enough to understand, without admonition, that the course pursued by the heroine in the preceding sketch is not specially commendable, though there are male flirts and deceivers who undoubtedly deserve the heroic treatment described.—Ed.]

Dr. Mason, there is no doubt, was a good judge. A brother minister intending to purchase a horse, stopped the doctor to ask his opinion. After taking a good look at him, Dr. Mason pointed to the knees of the horse, which were worn, indicating that he was in the habit of stumbling. "That," said he, "is a good sign for a minister, but a very bad sign for a minister's horse."

Wit and Humor.

ECHOES.

The hopes that I have seen depart
My visions only can review;
Ah, happy freshness of the heart
That fell upon me like a dew,
Adieu!

I flung my golden time away
In dreams, and never felt it pass:
I wake and find myself to-day
A silly, sentimental ass,
Alas!

The high desires of other days
Are dead:—Ambition's reign is o'er:
The heart that once beat high for praise,
Beats high (to quote a line o' Moore,)
—[*London Fun.* No more!

HUMOROUS SALAMAGUNDI.

A lawyer, not over young or handsome, made many attempts to confuse a young lady whom he was examining as a witness. She, however, remained calm. At last, determined to perplex her, the lawyer said, "Miss, you are very pretty!" The young lady promptly replied "I would return the compliment, sir, if I were not on oath!"

Scene in a Perfumer's.—Sentimental young lady to perfumer:—"I don't think you forwarded the scent I meant; it seems entirely different to that I ordered." Perfumer, (who is fond of punning:)—"Madam, I am sure that what you meant I sent; the scent I sent was the scent you meant; consequently, we are both of one sentiment."

A young buck of the soap-lock order, who wore an unshaven face, because, as he said, "it looked foreign," lately accosted a Yankee as follows:—"I say, fellow, some individuals think I am a Frenchman, and some take me for an Italyean; now what do you think I am?" "Waal, I think you'r a darn'd fool," replied Jonathan.

About Babies.—An exchange says:—"Babies resemble wheat in many respects. First—Neither are good for much until they arrive at maturity. Second—Both are bred in the house, and are also the flower of the family. Third—Both have to be cradled. Fourth—Both are generally well-thrashed before they are done with."

"You are from the country, are you not sir?" said a dandy young book-seller to a homely dressed Quaker who had given him some trouble. "Yes." "Well, here's an *Essay on the Rearing of Calves.*" "That," said Aminadab, as he turned to leave the shop, "thee had better present to thy mother."

"My friend," said the Rev. Sidney Smith to a cobbler who was mending his shoe when the great wit was a poor curate in Gloucestershire, "you remind me of the sacred ordinance of matrimony." "How so?" quoth the cobbler. "Because you bind two souls together in unity!"

A Western editor thinks that if the proper way of spelling tho is "though," and ate "eight," and bo "beau," the proper way of spelling potatoes must be "poughteighteaux." The new way of spelling softly is "psoughtleigh."

A correspondent (and, we are sorry to say, one of the fair sex) has sent us the following atrocity:—"If my father's head were divided into two equal parts, what time of day would each portion represent? Half-past eight (half pa's *tete.*")

A French wit says the gibbet is a species of flattery to the human race. Three or four persons are hung from time to time, for the sake of making the rest believe that they are virtuous.

On a tombstone in a churchyard in Ulster is the following epitaph: "Erected to the memory of John Phillips, accidentally shot as a mark of affection by his brother."

A Miss Gillmore, somewhere down East, was courted by a man whose name was Haddock, who told her that he only wanted one Gill more to make a perfect fish.

An editor in Michigan, talking of corn, professes to have a couple of ears fifteen inches long. Some folks are remarkable for the length of their two ears.

ANSWERS TO ENIGMAS, &c., IN No. 931.

Answer to Miscellaneous Enigma:—Open rebuke is better than secret love."

Answer to Anagram:

Who can tell me where have fled
Hopes of yore?
Like the summer leaves they're dead,
To come back, ah, nevermore.

Answer to Illustrated Prize Rebus in No. 930.—We have received many answers to the Prize Rebus in No 930 of the Rural, but none of them are strictly correct; two or three are nearly so, one of which reads thus:—"Woman sometimes inflames man against man." Many of the answers are amusing; here are some specimens:—"Woman inflames the times against tobacco;" "A woman fires three times at two pickpockets;" "Behold how a great flame may sometimes be kindled by a little *spark* in a back room." The correct answer is—"*Mistakes sometimes inflame men against each other.*"

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19. Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK

Premium List, Show-Bill, &c.—Our Premiums to Club Agents are more liberal than ever before, but we have not space to give a list of them in the Rural. Premium Lists, Show-Bills, Specimens, &c., are promptly sent, free, to all applicants. Give us your address, and also that of any friends who may be disposed to form clubs, that you and they may see our offers of "Good Pay for Doing Good."

The Best and Cheapest Horse and Cattle Medicine in the World!

WALTER B. SLOAN'S IMPROVED CONDITION POWDER

THE GREAT STANDARD MEDICINE

For Horses and Cattle,

Used throughout the United States and Canadas during the last 23 years.

For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.

SLOAN'S CONDITION POWDER

Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse and Cattle Medicines.*

It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.

The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them

SLOAN'S CONDITION POWDERS

twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.

The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder**, in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.

CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.

PRICE 25 & 50 CTS. PER PACKAGE.

For sale by Druggists and Merchants everywhere.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

AGRICULTURAL.

SELECTION AND PREPARATION OF WINTER FOOD FOR ANIMALS.—No. III.

DOES IT PAY TO COOK FOOD?

THIS question is the all important one; for if it does not pay a balance over the expense, then no profit can accrue from its practice. We have endeavored to bring this question to the test of accurate experiments, and have found that sixteen pounds of hay cut and steamed is equal to twenty-four pounds of the same hay uncooked. The animals fed upon the steamed hay improved, while those fed upon the unsteamed barely held their own. We have stated that half hay and half straw mixed and cooked is equal to hay uncooked. But we think our experiments will warrant the statement that one-fourth to one-third hay and two-thirds to three-fourths straw, well steamed, is equal to the same quantity of hay uncooked. While fattening cattle we tried an experiment with ten head, feeding them for two weeks uncooked meal. The ten head were given three bushels of meal upon steamed hay per day, which they easily consumed. Then we took a bushel and a half of meal, made it into a thin pudding, stirred in six bushels of short cut hay, cooked it all thoroughly in a large kettle, and fed this amount daily to the same ten steers, with what other hay they would eat, for two weeks. This seemed to satisfy them even better than the three bushels uncooked, and they appeared to gain faster. This same amount was cooked and fed them afterwards for three months, when they were ready for the butcher, and were pronounced as well fattened as some other animals, which we learned had been fed eight months on larger quantities of uncooked meal.

Mr. GEO. GEDDES, who has fed pork extensively, says cooked meal is worth double for feeding hogs. GEO. A. MOORE, who has experimented with sheep and cows, says, "I think cutting and steaming combined insure a gain to the feeder of at least thirty-three per cent." Mr. MASON of New Jersey found that pork fed upon raw corn cost 12½ cents per pound, and that from cooked corn 4½ cents. JAMES BUCKINGHAM, as detailed in the Prairie Farmer, found that a hog fed one and three-fourths bushels of raw meal gained nineteen pounds, and another fed one bushel of cooked meal gained twenty-two pounds. Mr. WM. BIRNIE of Massachusetts, who has cooked the food for a milk dairy of some fifty cows for years, regards the gain by cooking as more than thirty-three per cent. Prof. HORSFALL of England, who has kept cows for milk, and experimented on different methods of preparation, says, "I cooked or steamed food for several years, and my experience of its benefits is such that if I were deprived of it I could not continue to feed with satisfaction."

And thus, all who have given cooking a fair trial, put the gain at from thirty-three to one hundred per cent. The testimony is uniform, and must carry conviction to the unprejudiced mind.

COST OF COOKING.

Next, let us see what it costs to cook food, that the reader may determine whether it pays. When cooking for forty-eight head of cattle and six horses, we found that it took two men and a boy, on the average, two and a half hours per day to cut, mix and steam the food for them. We estimated the labor, including the feeding, as equal to ten hours per day for one man. After the food is cooked the labor of feeding is less than in the ordinary way. It took ten cords of two feet, or five cords of four feet hemlock wood to steam for the season, worth about $20. We regarded the extra expense of labor, over common feeding, at $60, added to the wood makes $80 as the whole extra expense. The amount saved could not have been less than $10 per head, or $540. The saving in amount of food alone would equal this, besides being able to use much coarse fodder, that would otherwise have been wasted.

APPARATUS FOR COOKING.

We promised in our last to describe, in this, the proper apparatus. Our space is limited, but we will do something to assist our readers in this matter. A wrought iron hollow cylinder, one-eighth of an inch thick, thirty inches in diameter, four to six feet long, with quarter-inch iron heads, hand hole in front end to clean it out, secured by iron stopper with rubber packing, also a stop-cock in this end from which to draw hot water; a one inch steam pipe coupled to the top of boiler, reaching over the brick arch down to the bottom of the steam box, entering the side near the center; also a short pipe on top with a stop-cock through which to fill the boiler with a tunnel. It should be filled about two-thirds full of water. The boiler must be set in a brick arch, raised fifteen inches above the grate, walls sixteen inches apart. The fire is conducted under the length of the boiler, raised some at back end, then carried along each side to near front end in a flue and back in another flue above this to the chimney. This leaves the front end of the boiler exposed. There should be a three-sixteenth iron front to receive the end of the boiler, extending from bottom of ash pit to top of boiler, in which are the doors for fuel and ash pit. The six-feet boiler will have a capacity to cook food for any number of animals up to two hundred, and will cost, including front, grate, steam pipe, all complete, $100. A *Steam Box* should be made with two-inch staves and hooped with strong band iron, of such size that it will hold one, and better, two days' feed for stock, with a close-fitting cover, held down by a shore. We use one of these boilers.

CHEAP STEAMER.

For a small stock, a cheap arrangement may be got up, by setting a caldron kettle in a brick arch, with a flue leading under and around the kettle into a chimney. A linseed oil cask may be set on top and just inside the kettle and fitted tight by using water-lime mortar outside the cask on the rim of kettle, one-fourth inch holes being bored in lower end to let the steam up. The upper end should be sawed around close to the upper hoop, so this end may be taken off in filling and put on again. A two-inch hole may be bored through center of bottom through which to fill the kettle. This will work well if water is always kept in the kettle. A tub larger than the kettle may be used and the bottom fitted to the rim of the kettle, and a strip of India rubber put on the rim, holding the tub down with a shore. A *Cheap Steamer* may also be made by taking a sheet of No. 18 iron about three feet wide, seven or eight feet long, or two sheets riveted together if more work is to be done, making one fourteen feet long; then make a box of two-inch plank, one inch narrower and shorter than this sheet of iron, plank about two feet wide; nail this sheet on the bottom with double rows of five-penny nails, one inch apart in rows, breaking joints, and bend up the sheet where it projects. Set this on a brick arch so that the bottom shall lap four inches on the wall on each side, with a chimney a little longer than the arch. This will do for boiling grain or vegetables, but to cook hay, &c., you must have a false sheet iron bottom, with small holes to let the steam up, raised an inch or two above the real bottom. This will keep the hay from burning on the bottom. It may be supported by strips of wood laid on the lower bottom, which, being in water, will not burn. With a cover on this box you have a cooking apparatus without any pressure, and very cheap. And lastly, if you wish an apparatus already made to your hand, to which you only have to attach a steam-box to be ready for use, for all kinds of cooking, you can get D. R. PRINDLE'S Agricultural Caldron and Steamer.—E. W. S.

PORTRAIT OF A NORMANDY COW.

WE portray this week a cow of the breed or family which derives its name from the province of Normandy in France. It is a lowland race, its progenitors probably coming from Holland, and has many points common to the Short-Horns; some eminent breeders, indeed, have advanced the opinion that the Holland is the parent breed of the Short-Horn as well as of other lowland types that are found on the continent. Color is the most striking difference between the Normandy breed and the Short-Horns, that of the former almost always prevailing in spots, having sharp, distinct outlines, very rarely showing the uniform colors so frequent on the latter or the blending of two which forms a roan. This race excels the English type of lowland cattle in milking qualities, and can hardly be called inferior for beef. They mature early, are gentle, elegant in form, and are more certain breeders. They combine eminently the best points of a lowland breed.

RURAL FARMERS' CLUB.

How to Trap Rats.

C. N. O., Prentice, Mich., sends us the following directions for catching rats: Where rats inhabit a house or cellar, take a kettle that holds five or six pails, fill it a little over half full of water, and sprinkle on a few quarts of bran, or any light substance that will not sink—covering the water completely over, and placing a box so that it will be all handy for them to get to the top of the kettle. One after another will jump down on the feed and go under, and as they cannot climb up the kettle, must be drowned. It is a good plan to let them have the feed alone in the kettle a couple of nights, as they are generally a little shy at first. When I find them around hog-pens and corn-cribs, I always get rid of them by shooting a few of their number, after which the remainder will go away. To catch them in steel-traps, set the traps in their holes or runways, and spread a brown cloth or paper over them. If you want to poison them, there is probably no easier method than to soak a bunch of matches in a teacup of water over night, then add meal enough to make it stiff dough, adding a spoonful of sugar and a little lard. Place this around where the rats and nothing else will get it.

Queries for the Club.

H. A. P., Niagara Falls. Can any of your readers inform me whether there is any law regulating miller's tolls? Having examined carefully, and failing to find any, I conclude that each one is a law unto himself, and takes as much as he chooses.

I would like the opinion of your readers about wheel plows. From my observation and experience, and the fact that these wheels are generally taken off and laid aside by farmers in this region, I think they are only necessary for the lazy and unskillful.

A Desideratum.—A light portable steam engine at about half the price of those generally used (say $800) to drive our thrashing machines, and thus supersede the cumbrous and expensive ten-horse team now generally in use. By the use of hose all danger of fire may be avoided.

Plans for Farm Buildings.

MR. A. W. FOOTE, Grand Rapids, Michigan, writes us as follows:—"Some two years since I had a large farm barn burned, and wishing to rebuild have decided to adopt your first premium barn, published some years since, and republished April 15, 1865. The first number I loaned to a neighbor and it was lost. The 1865 number I sent away last winter to a draftsman for specifications, which never reached its destination. Can you send me the plan and specifications, or direct me where I can procure them?"

This sample letter shows the estimation and value placed on good designs for farm buildings by the readers of the RURAL. For the benefit of new subscribers we shall probably republish the above mentioned plan (unless we can find a better one) before another spring.

Prospering in a New Country.

ONE of our subscribers writing from Clark Co., Iowa, thus sketches a neighbor:—"He has a section of land all fenced in, has over one hundred acres of small grain, and, I think, as much timothy meadow, and over fifty acres in corn. He has just completed a stock barn one hundred and four feet long by seventy-five feet wide. He deals largely in stock, having over sixty fat steers on hand. He is a man that works and attends strictly to business; coming into this country some thirteen years ago with no means save good health and plenty of energy (the best capital for a new country,) he has far outstripped many with larger means. This is a great county for stock raising, as we have plenty of range and good grass."

FROM WESTERN TEXAS.

Live Men and Improvement Needed—Extent of Western Texas—Fine Pasturage—Cheapness of Keeping Sheep and other Stock—Prices of Cattle, Horses, Sheep, &c., —Fine Wooled Sheep—Advantages for Northern Settlers—Industrious and Intelligent White Men Wanted—Climate Healthful—Northerners Welcome and Safe from Molestation, Etc., Etc.

[In remitting for the RURAL a gentleman in DeWitt Co., Texas, writes us the following interesting letter:]

OUT here in Western Texas we are entirely behind the age in all that pertains to farming and stock raising. With greater natural advantages than are to be found elsewhere on earth, we continue non-progressive and stagnant. We greatly need some "live" men and fresh ideas to stir us up to action and improvement—and we think an intercourse between the headquarters of advancement in Horticulture and Stock Breeding, and a region possessing every requisite for success except energy and information, might be mutually beneficial; at the least we are sure we cannot be hurt or set back thereby. We think, too, that your people might find their advantage here in the sale of improved breeding stock and the new labor-saving farm implements.

We have in Western Texas, from the Colorado to the Rio Grande, 40,000 to 60,000 square miles of the finest pasturage in the world, thousands of leagues of which are yet open for entry, or for sale from the patentee at 25 cents to 50 cents per acre. The range on three-fourths of it is the nutritious Mesquit grass, upon which stock keeps fat the year round without a particle of hay or other food. A great part of it is peculiarly adapted to sheep, which require only a break-wind from the Northers during the severest weather known here. There are perhaps a million and a half head of sheep in the country named, which, from neglect and injudicious breeding, only yield some three pounds of wool to the head, worth here 10 to 12 cents per pound, specie.

Our cattle are large and fine looking, and furnish fine oxen, and the Mesquit-fed beef is particularly sweet and nutritious; but they have not the qualities which are desired by the butcher or the dairyman. As to horses they have run down to 14 hand ponies, with many excellent qualities in the way of hardihood, sure-footedness and stamina, but hard to sell at 4 or 5 years old for $30 to $40. Stock cattle, which includes cow, calf, yearling, two-year olds and some three-year olds, can be had at $2.50 to $3 per head round. Stock horses, say mares, colts, yearlings and all sorts unbroken, are offered at from $7.50 to $15 a head; some choice herds with a large mixture of good blood might bring $20 to $25. Sheep at 50 cents to 75 cents for Mexican mixed; $1 to $1.50 for grade Merinoes. Cotswolds and South Downs, degenerated from neglect, at about $1. Goats, 25 cents to 50 cents. Beef cattle, which weigh 500 to 700 neat, can be had at $8 to $12. From these prices you will infer that the business of stock raising as carried on here, is not very profitable; yet, as the range costs nothing, and there is neither food nor shelter to be provided, our people manage to make a living at it.

Now what we greatly need is a branch of one of your scientific stock farms—and especially a concern that makes fine wooled sheep a specialty. Being personally interested in the sheep business, and it being evident that that calling will soon become the main business of the country, I would state that we have very few fine bucks in the country, and that no one makes the raising of them for sale his particular business. Consequently we get the best we can, and pay $10 to $20 per head for degenerate beasts that have lost all the characteristics of their ancestors. I lately saw $100 in specie paid for ten yearling bucks, called Merinoes, but without a particle of wool on their legs, and not much elsewhere. I am confident they would not clear 3½ pounds a head. These were turned into the flock, and in a month or so will be taken out and some attempt made to keep them separate—probably put in a fenced pasture to remain till wanted next fall, but in the meantime they will inevitably find a gap down or a hole to creep through and wander off to some flock to get a batch of lambs to come in midsummer or at Christmas. They will get little or no attention, and probably the dogs will kill some and the screw worm from wounds in fighting will kill more, and when needed a third to a half of their number will be missing. In this county (De Witt,) there are about 100,000 sheep, and the above is only a fair account of the management in regard to

bucks. I would gladly pay one-third the value of really good bucks for their season's services to a man who would furnish them, and next season send me a new batch. I believe my bucks would cost less money than at present, and that the value of the lambs would be doubled. I cannot promise that all here would at first come into this system, but they soon would.

A man with a family—thrifty, industrious people, who understand the care of sheep—coming here with no capital but a score or so of fine Merino sheep, could easily get a flock of 500 to 1,000 on shares, a house and little farm furnished him, and as many cows as he would milk. He would get one-third the increase of the sheep for his services, and two-thirds of the produce of the land for his labor on the farm. Our planters who cultivate corn and cotton, furnish the freedmen with house and fuel, as much garden as they will cultivate, let them keep as many hogs and as much poultry as they please, and milk as many cows as they please, all free, and divide the gross produce of the plantation in cotton and corn equally—one-half to the owner and one-half to the freedmen. Under this system everything is going to ruin—the fences, buildings, gates, &c., tumbling down, and the land not half cultivated. The negroes wont work. They can live easy, and that is the extent of their ambition. Industrious, managing white people, in the same position, would make expenses out of the garden, dairy and hog-pen, and have all the crop money to buy land and stock for themselves. We would gladly give them at least a negro's chance. At present we cannot introduce or use any of your labor-saving tools; the negroes would break them or leave them in the fence corners. We know the result of the course we are in, but without reliable labor, capital and skill, we are powerless to change it.

We want industrious, intelligent white labor, and we have a veritable white man's country for it to work in. In the west, away from the coast flat, the land rises rapidly to the mountains, with swift-flowing rivers and perfect drainage. There are no swamps or ponds to breed miasma, the air is pure and bracing, and the summer's heat tempered by an almost constant, brisk sea-breeze. Here a white man can work out of doors all the year round, and retain his full health and vigor. People of consumptive tendency are greatly benefited—often entirely cured—by the climate. Thousands die yearly at the North before reaching their prime, who, by coming here in time, would live to a fair age in health and enjoyment.

But I will not trespass on you further, except to notice one important fact. There seems to be an impression at the North that Northern men are unwelcome here—that they are not safe—are liable to wrong and insult, &c. Now, this is totally erroneous. We are sick of strife and nauseated with politics, sectional and national,—we want peace and progress;—we need your skill, industry and go-ahead qualities; we need your labor and your machinery; we need your capital, and to have all these we need to cultivate friendly relations, and we know it.

OUT WEST.

LETTER FROM ARKANSAS.

Information Wanted on Grain Growing and Stock Raising—The Cotton Crop—Northern Settlers Desired—The "War of Races," &c.

ARKANSAS POST, Ark., Nov. 3, 1867.

FRIEND MOORE:—Inclosed you will find my check on ISAAC STRAUB & Co., Cincinnati, Ohio, for $3, to pay for RURAL NEW-YORKER one year. I have long heard of your paper, but never needed it till now, as I have always been planting cotton and buying everything else; but the cotton time has "played out," and we now have commenced the more pleasant one of raising hogs, horses, sheep and cattle, and such garden truck as wheat, oats, barley, pumpkins, &c. So I just thought I should like to read what you know of stock raising, and if I could learn anything new. We will go pretty big into the business, as it costs us but little to handle large quantities of stock. I think we will be able in a few years to ship beef and horses to Ohio and New York.

Our cotton crop is the poorest I have seen in thirty years, and yet every newspaper correspondent tells the world that the crop is fine; but I have seen no good one. It is the fashion this year to lie up a good crop; last year everyone tried how hard he could lie to make the crop appear small. I will wager you the price of a year's subscription that the crop is less than the crop of '66, and I doubt if it will reach one and a half million bales.

If you see any one wishing to move South tell him to come on; there is no danger of being murdered by Rebs; they will be glad to welcome him. The Radicals in the South are doing all they can to inflame the negro. Our planters are getting very uneasy, and many will move if they can get money to go. We don't hate the negro; don't blame him for being free; don't seek a war of races, but if it does come we will do our best. Respectfully yours,

JAMES H. MOORE.

CRAWFISH AND LAND DRAINAGE.—C. SPRINGER, Muskingum, Ohio, in a communication to the Ohio Farmer on land drainage by tile and otherwise, and the aid afforded by the crawfish in facilitating the operation, says:—"Our attention has been directed to the crawfish, in connection with draining lands, for near half a century. If you establish a drain that gives them free access, they will immediately take charge of it, make the surrounding ground full of holes, conducting the surface water to the bottom of the drain. If it gets stopped up, they will bore a hole for the passage of the water, and act in every way as though they consider they have the special charge of the concern, and are disposed industriously to attend to its interests."

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

ANNUAL MEETING OF NATIONAL WOOL GROWERS' ASSOCIATION.

THE Executive Committee of the National Wool Growers' Association met, pursuant to the call of the President, at Pittsburg, Penn., Nov. 26th.

The following members were present:

New York—Henry S. Randall, John D. Wing.

Ohio—Hon. Columbus Delano, Hon. R. M. Montgomery, W. F. Greer.

Illinois—A. M. Garland, Samuel P. Boardman.

Pennsylvania—Dr. F. Julius Le Moyne, James Slocum.

West Virginia—Thomas Sweeny, Samuel Archer.

Wisconsin—Eli Stilson.

Vermont—E. S Stowell, stating that he was requested by Hon. Edwin Hammond to appear as his substitute, was invited to take a seat in the Committee. Gen. Harry White of Penn., (member of the Tariff Committee to Washington last winter,) Gen. S. D. Harris of the Ohio Farmer, C. D. Bragdon of the Chicago Republican, J. T. F. Wright of the National Agriculturist, (Penn.,) J. McD. Glenn, Sec'y of Penn. State Wool Growers' Association, Joshua Wright of Penn., Mr. Kelley of Wis., and other eminent friends of the Association were also invited to participate in the deliberations.

The President laid before the Committee the following proposition to change the Constitution of the Association:

Resolved, That the Constitution of this Association be so amended that each State Wool Growers' Association connected with it shall annually appoint two members of the Executive Committee of this Association in addition to the President of the State Association.

Resolved, That the following persons be appointed the additional members of the Executive Committee thus provided for, until others shall be elected to fill their places.

Mr. Randall, to explain the effect of the proposed amendment stated that the Executive Committee of the National Association, as now constituted, consists "of the President, Vice-Presidents, Secretary, Treasurer and one additional member to be elected annually by each of the State Associations." The Presidents of the State Associations are *ex-officio* Vice-Presidents of this body. The resolution provides that each State organization shall elect two "additional members" of this Committee instead of one. The object of the proposed change is to allow the entire wool growing interest of the country to be directly represented in this Association. Now it is ostensibly the organ or representative of *fine* wool growers only. It had, in point of fact, labored as strenuously for the interests of the coarse as the fine grower. Its Committee, who united with a Committee of the National Association of Wool Manufacturers in framing the scale of duties which was engrafted into the present wool and woolen tariff, struggled for weeks in the joint meetings held at New York and Washington, before they could induce the Manufacturers' Committee to agree to recommend the same duties on coarse and combing wools as on Merino wools. Indeed, the Joint Committee had once adjourned, and it was supposed at the time finally adjourned, without coming to an agreement in respect to the duties on coarse wools—thus leaving our labors incomplete and in a shape to exercise no important influence on the deliberations of Congress. We believed the coarse wool growers' rights and needs were equal to our own, and we chose to throw away all rather than to make a separate treaty for our own benefit. After such adjournment he (the President) had refused to call the Committee of this Association together again, to take part in the action of the Joint Committee, until satisfactorily assured that the Manufacturers would agree to recommend to Congress an equal tariff on *all* the wools, whether coarse or fine, grown in the United States. And such a recommendation was made, and successfully made.

The coarse wool growers therefore could not and did not complain that their interests had not been faithfully represented and fully taken care of by this Association. But, in his judgment, it would be far better to call them directly into this body, so as to enable them to speak and act for themselves in all its future proceedings. It was but fair and just. The Association would not be truly *national* in its character, until it embraced a direct personal representation of all the wool growing interests of the country. To accomplish this was the object of the proposed amendment of the Constitution. It was offered and if it passed, it should be passed with the distinct understanding that its object was to provide for the annual appointment of one fine and one coarse wool grower as members of this Executive Committee, by each State Association.

Mr. Glenn: Why not then express that fact in the resolution?

Mr. Randall: Because an understanding to that effect is sufficient and will be honorably carried out. Because it might be thought to imply, by those unfamiliar with the history of this Association, that heretofore the "coarse wool men" had been intentionally excluded from a participation in our proceedings—which was not the fact. Because it may be doubtful whether we have any authority to *prescribe* the qualifications of the representatives of State Associations. He continued:—The present organization does not conveniently admit of the same division of representation as between different interests. The Presidents of State Associations are chosen in reference to a great variety of both internal and external considerations, and the choice should not be hampered or affected by the special one under consideration. There could be no sound objection to an increase in the number of this Committee: on the contrary, it promised beneficial results apart from the particular object for which it was proposed.

Every member of the Executive Committee present expressed himself favorable to the amendment, whereupon, on motion of Mr. Delano, it was unanimously adopted.

The following gentlemen were then appointed additional members of the Executive Committee under the second resolution:—Norton S. Townshend, Avon, Ohio; John D. Wing, Washington, New York; J. H. Pickerell, Harristown, Illinois; I. S. Hazleton, Richland Center, Wisconsin; Burdett Loomis, Windsor Locks, Connecticut, (for New England Association;) J. H. Davis, Piedmont, West Virginia; Henry Keyes, Newbury, Vermont; —— ——, Pennsylvania.

Mr. Garland of Ill. offered the following resolution:

Resolved, That a committee of three be appointed to revise the Constitution of the Association, and to report at the next annual meeting.

Mr. Stilson of Wis. said that he was one of the committee which originally drafted the present Constitution; that the committee were compelled to act in great haste and that they therefore drafted a crude instrument, sufficient for temporary purposes, under the expectation that it would be revised as soon as opportunity offered. He therefore favored the passage of the resolution.

After some further explanations, the resolution was unanimously adopted, and the following committee nominated and elected:—Mr. Randall of N. Y., Mr. Edwin Hammond of Vt., and Mr. Garland of Ill.

The President appointed the following committees:

On Resolutions—Hon. Columbus Delano of Ohio, Samuel P. Boardman of Ill., Eli Stilson of Wis., Thomas Sweeny of West Va., F. Julius Le Moyne of Penn., John D. Wing of N. Y., Harry White of Penn.

On Apportionment of Expenses—Eli Stilson of Wis., James Slocum of Penn., Samuel Archer of West Va.

The President informed the Association that he had held some correspondence with the officers of the National Association of Wool Manufacturers on the subject of holding a National Exposition of the wool and woolen interests of the country at some place, say Chicago, in the spring of 1868—each Association being empowered to designate such objects of exhibition as it shall deem expedient. The Manufacturers strongly favored the measure, and would make prompt preparations to carry it out on a splendid scale should this Association invite their co-operation. They decidedly preferred Chicago as the place of holding the Exposition. He (the President) believed that a general exhibition of our sheep, wool and woolen manufactures would be attended with the most beneficent effects on the respective interests at large, and on Congress should that body be disposed to alter or tamper with the provisions of the present wool and woolen tariff. He could not doubt that a city so proverbial for public spirit as Chicago, would make arrangements which would render such an Exposition feasible.

Mr. Garland of Ill. was in favor of the Exposition if the preliminary arrangements adverted to by the President could be made with the citizens of Chicago. He was not prepared to express a definite opinion on that point, without further examination. He mentioned several reasons why Illinois and Wisconsin would not be as well prepared as usual to make a proper exhibition of sheep next spring, but he thought none of these objections would apply to wool, if the exhibition on the part of growers was limited to that article.

Mr. Boardman of Ill. and Mr. Stilson of Wis. concurred in these views.

Mr. Bragdon of Ill. stated that the Agricultural Show Grounds at Chicago had been sold and their structures removed. He could not now think of any other grounds and buildings in or near the city which would be suitable for the purposes of a *joint* exhibition. The erection of such structures would involve very considerable expense, and he was not prepared to say whether the necessary amount of money for this, and to make it certain that the expenses of the Exhibition would not fall on the two Associations, could be raised. He thought it expedient to make inquiries of the proper persons at Chicago before taking definitive action. If the Growers' Exhibition was confined to wool, there would probably be little difficulty in obtaining a suitable building for the Joint Exposition within the city.

Gen. Harris of Ohio was in favor of the Exposition. He thought it highly desirable on various grounds. He should very much dislike to leave out the show of sheep. He suggested that Cleveland or Pittsburg might be as good a place for the Exposition as Chicago.

Mr. Le Moyne of Penn., and several other members concurred in the latter suggestion.

Mr. Wing of N. Y. was decidedly in favor of the Exposition and of a show of sheep.

Mr. Le Moyne of Penn. thought a show of sheep would be one of the most important and attractive features of the occasion. It would be necessary, to make our side of the Exhibition as imposing as that of the Manufacturers. He would test its feasibility by asking who present would show their sheep? In answer to a question, he said he was certainly ready to show his own.

Mr. Wright of Penn., Mr. Wing of N. Y., and others expressed their willingness to do the same.

Mr. Sweeny of West Va., Mr. Slocum of Penn., Mr. Stowell of Vt., Mr. Greer of Ohio, Mr. Archer of West Va., and Mr. Kelley of Wis., expressed themselves in favor of the exposition.

Mr. Montgomery of Ohio, on reflection, became more and more favorable to an exposition, but he saw difficulties in the way, especially in the way of an exhibition of sheep. He thought that the same special difficulties which had been declared to exist in the way of an exhibition of sheep in Illinois and Wisconsin, existed also in Ohio, and he feared eastern growers would not carry their sheep so far west. He would prefer not to commit this Association irrevocably to the exposition until more light was obtained on the subject.

Mr. Delano of Ohio was strongly in favor of the exposition, and of an exhibition of sheep if found practicable. But he would prefer to leave all the doubtful questions to be solved, and all details arranged, as well as the whole subject of holding the exposition, decided on after due examination by a committee of this body. He therefore offered the following resolution:

Resolved, That a committee of three be appointed by this Association with power at their discretion to arrange with the National Wool Manufacturers Association for a national exposition of their respective industries, at such a time and place as may be agreed upon.

The President expressed his concurrence in this resolution. He said the want of a proper place of exhibition at Chicago, and the other considerations which affect the holding of an exposition there, named by Mr. Bragdon and others, were new and wholly unexpected by him. So, too, were the difficulties in the way of drawing out a great and imposing show of western sheep, declared to exist by the western members of the committee. Under these circumstances he was opposed to committing the Association at present. He was in favor of proceeding safely.

Mr. Montgomery asked that the resolution be laid on the table until the meeting of the committee to-morrow morning, which was done by common consent. The committee then adjourned.

WEDNESDAY, NINE A. M.

The Executive Committee met pursuant to adjournment.

Mr. Delano, from the Committee on Resolutions, offered the following

RESOLUTIONS:

Resolved, 1st. That the financial necessities of the nation render a tariff for revenue purposes indispensable, in order to pay our national obligations and preserve our national honor

2d. That in regulating duties on imports, Congress should exempt such articles of general necessity as are not produced in this country, and should so adjust duties on other articles as to give fair and just protection as far as practicable to all products of American industry.

3d. That, considering the compact, extensive and persistent efforts of the free trade interest to destroy American industry and weaken our national resources, it is the duty of all the industrial interests of the nation to unite in a common effort to counteract this foreign free trade policy.

4th. We regard the present duties on wool and woolen goods as well adapted to promote and harmonize the true interests of producers and consumers of wool and woolen goods. We, therefore, have full faith in the ultimate results of this tariff, and insist that it be neither modified nor repealed until time shall fully demonstrate its effects.

5th. That "the interests of Wool Manufacturers and Wool Growers, being recognized as identical, further measures should be adopted to make each class familiar with the respective wants and necessities of the other."

6th. That the National Association of Wool Growers take great pleasure in expressing their thanks and gratitude to the Congress of the nation, for passing at its recent session the existing wise and necessary tariff for the protection, increase and development of wool growing and wool manufacturing interests of the country. And that we have every confidence that this legislation will be stable and permanent, to the end that business arrangements already made in conformity to it, may be encouraged, and a great branch of national industry advanced and protected.

On motion of Mr. Sweeny of West Va., the resolutions were taken up separately. After some discussion all of them were adopted.

On motion of Mr Slocum of Penn., the resolution yesterday offered by Mr. Delano of Ohio, in relation to the appointment of a committee of three, with power at their discretion to arrange with the National Wool Manufacturers' Association for a national exposition, &c., was taken from the table, and, after remarks of various members as to the proper period of the spring for holding the exposition, unanimously passed.

The following gentlemen were nominated and elected said committee:—Henry S. Randall of N. Y., John D. Wing of N. Y., A. M. Garland of Ill.

Mr. Randall stated that this appointment imposed an unpleasant degree of responsibility, and that he, as one of the committee, would not consent to accept that responsibility except with the understanding that every member of the Executive Committee, and those invited to unite in its deliberations, would endeavor to ascertain the views of the wool growers of their respective localities in regard to holding an exposition and the proper objects of exhibition, and communicate those views to him; and, secondly, that any other members of this Executive Committee who would meet with the sub-committee should be allowed to take part in its proceedings. This being assented to, he accepted the appointment.

Gen. White of Penn. offered the following resolution:

Resolved, That a committee of three members of this Association, of which the President shall be chairman, be appointed to prepare an address to the wool growers of the United States in reference to their present condition, interests and necessities; and that the different newspapers of the country friendly to this branch of national industry be and are hereby requested to publish this address, and that the chairman be requested to forward a copy of the address, when issued, to the members of the National Legislature, as well as the resolutions this day passed by the Association.

The President begged Gen. White to withdraw this resolution, or at least not to designate him as chairman of the proposed committee. Gen. White declined, and urged the passage of the resolution. The President then asked him to consent to lay the resolution on the table until the evening session of the Executive Committee, which was agreed to.

On motion of Mr. Montgomery of Ohio, the Executive Committee proceeded to elect officers for the ensuing year, and the following were unanimously chosen:

President—Henry S. Randall, Cortland Village, N. Y.

Secretary—Wm. F. Greer, Painesville, O.

Treasurer—A. F. Wilcox, Fayetteville, N. Y.

Mr. Delano of Ohio offered the following resolution:

Resolved, That the President be authorized to appoint Hon. R. M. Montgomery of Ohio as the representative of the interests of this Association at Washington, whenever in the judgment of the President the exigencies of the occasion shall demand such representation.

It being suggested that illness or other causes might deprive Mr. Montgomery of the ability to attend to these duties, and that circumstances might require the attendance of more than one representative in Washington, Mr. Delano so modified his resolution as to authorize the President also to appoint Hon. E. B. Pottle of N. Y. and A. M. Garland of Ill. as additional representatives, should he deem it necessary. In this form the resolution was unanimously passed.

The Executive Committee then adjourned to attend the wool growers' meeting called at the Court House at two P. M.

WEDNESDAY, SEVEN P. M.

The Executive Committee met.

Mr. Stilson of Wis., from the Committee to Apportion Expenses, presented a report, which was unanimously adopted.

Mr. Delano of Ohio called up Gen. White's resolution to appoint a committee to prepare an address to the wool growers of the United States, &c. The President again asked to be excused from acting as chairman. Mr. Delano and Gen. White objected. The resolution was then unanimously passed, and the President appointed Mr. Delano and Gen. White as the remaining members of the committee.

The Executive Committee then adjourned, subject to the call of the President.

Rural Notes and Items.

ADVENT OF WINTER.—Contrary to general expectation, winter has closed in upon the country without the customary autumnal rains. The streams are very low, and much of the water in them has already been converted into ice. The canal is fast locked up—the weather for the last few days having been quite cold. A snow storm commenced on the 7th and ended on the morning of the 9th, leaving about six inches of sleighing on the ground. The streets are now musical with sleigh-bells, with a prospect of lively times. In anticipation of an early thaw, the Canal Commissioners have rescinded their order closing the canals, leaving the matter open for further consideration.

TRANSACTIONS OF THE N. Y. STATE AG'L SOCIETY.—We have received from the Secretary of the New York State Agricultural Society, B. P. JOHNSON, Esq., a volume containing the proceedings of the State Agricultural Society for 1866; also an abstract of the proceedings of county Agricultural Societies for the same period. It makes a volume of nearly eleven hundred pages, embellished with numerous engravings of stock, buildings, &c., the whole forming a valuable book of reference, especially for those engaged in rural affairs.

A NEW ENEMY TO CORN.—A correspondent of the Maine Farmer notes a new enemy to the corn crop in the shape of a green worm about the size of a pipe stem, and from one to one and a half inches in length. Dark stripes, running longitudinally the whole length of the worm, are noticeable. These worms eat through the corn husks, and then commence on the grain, which they destroy rapidly. The party furnishing the information lost about one-fourth of his corn crop by this new enemy.

FARMING IN NEBRASKA.—The editor of the Prairie Farmer is making, or has made, a trip to the Rocky Mountains, being one of the "Fraternity" engaged in the rail road frolic. He states that farming is receiving much attention about the region of Omaha and west of that along the line of the road. A belt of country sixty miles wide, extending N. E. and S. W. along the Missouri from the crossing into Nebraska, is underlaid with sand stone, affording good land drainage. This belt produces wheat in abundance, averaging from forty to forty-five bushels to the acre, with an occasional field turning off fifty bushels. The yield of corn and potatoes is also very munificent.

MASSACHUSETTS AGRICULTURAL COLLEGE.—This institution commenced operations on the 2d of October, with a Freshmen's class of thirty-four students. Accommodations, as yet, have been prepared for only forty-eight students. The college course will extend through four years, and be so arranged as to furnish at the least possible cost the best literary and scientific education attainable, without attention to the dead languages. The academic year will comprise three terms. The first commenced Oct. 2d, and ends Dec. 17th; the second Jan. 31st, and ending April 17th; the third May 2d, and ending July 31st. Price of tuition, $36 per year; room rent, $15, and board from $3 00 to $3.50 per week.

NOTES FROM IOWA.—A correspondent writing from Moscow, Iowa, Nov. 30, says:—"The weather in Iowa has been magnificent. It has been very warm and dry all the fall. The first cold freezing weather we have had this season was Nov. 29th; it snowed a little and froze, making it very disagreeable after having warm summer weather. It has been excellent weather for the farmers to get in their corn, which is a double crop throughout the State this season, averaging fifty, sixty and seventy bushels to the acre. Wheat was not very good this season, although we had an average crop. At least, we cannot complain Iowa."

IMPROVING STOCK.—The American Stock Journal is of the opinion that our native breeds of cattle can be improved by proper care in selecting the best to breed from, so as to be equal to the best imported for dairy purposes, and, for many kinds of farm work, superior to it. All improved stock is derived from the intermixture of native breeds, improved by good keeping, and the selection of the finest specimens to breed from. What are called native animals are susceptible of being improved up to almost any point of excellence.

CAYUGA PLASTER.—In answer to our correspondents, "W. & W.," Jamestown, N. Y., we can only say that the Cayuga plaster is esteemed first-rate, and was generally used previous to the discovery of extensive beds in Monroe Co., about fifteen miles south of this city, which is extensively used and well esteemed, and sold in large quantities at this place. Nova Scotia plaster is probably the best known, but its expense excludes it from use in the United States.

AWARDS OF THE UTICA IMPLEMENT TRIAL.—We copy below the statement of the Judges, as issued in circular form by J. STANTON GOULD, Chairman, and B. P. JOHNSON, Secretary of the Trial Committee:

PLOWS.—CLASS I. *Sod Plow for Stiff Soils.*—The Judges unanimously awarded the Gold Medal to F. F. Holbrook, Boston, Mass., for his plow, 95.

CLASS II. *Plow for Stubble Lands in Stiff Soils.*—The Gold Medal awarded to F. F. Holbrook, Boston.

CLASS III. *Sod Plows for Sandy Soils and Light Loams.*—No trial in this Class.

CLASS IV. *Plow for Stubble Land, cutting a furrow twelve inches deep, with three horses, and raised the lowest cut to the surface of the furrow—furrow five inches wide.*—Unanimously awarded the large Gold Medal to F. F. Holbrook, Boston, Mass.

CLASS V. *Michigan Sod and Trench Plow.*—Unanimously awarded the Medal to F. F. Holbrook, Boston, Mass.

CLASS VI. *Subsoil Plow, in connection with an ordinary Plow.*—None of the Plows offered are worthy of a premium.

CLASS VII. *Ditching Plow for Opening Drains.*—Unanimously awarded the Gold Medal to N. Hawks, Appleton, Maine.

CLASS VIII. *Machine for Excavating Ditches for Underdraining,*—Edwin Heath, Fowlerville, Livingston county. Gold Medal. Unanimous.

CLASS IX. *Steel Plow for Alluvial and Unctious Lands.*—Gold Medal to Collins & Co., New York. Unanimous.

CLASS X. *Swing or Side Hill Plow.*—No award. Judges equally divided.

HARROWS.—*Best Harrow.*—J. E. Morgan, Deerfield, Oneida county, Gold Medal.

The Judges recommended a special premium of a Gold Medal to F. Nishwitz, Williamsburgh, for his *Pulverizing Harrow.*

CULTIVATORS.—CLASS I.—*For Corn and Root Crops—One-horse Cultivator.*—Alden & Co., Auburn, Gold Medal.

CLASS I. *Two-horse Cultivator, for cultivating two rows.*—To Pupper, the inventor, (the Machine being entered by A. L. Brearley & Co., Trenton, N. J.,) Gold Medal.

CLASS II. *For Mellowing Soil and Killing Weeds.*—Gold Medal to Ford & Howe, Oneonta, N. Y.

Best Cultivator Having Handles.—Wm. H. Burtis & Co., Maltaville, Saratoga county, Gold Medal.

THE PRESS AND THE RURAL.—We again beg to tender grateful acknowledgments for the kind and appreciative notices of the RURAL which we are receiving from the best judges of journalistic merit—editors of newspapers. As samples of many notices that have lately reached us we give the following extracts:

MOORE'S RURAL NEW-YORKER.—If the strong and voluntary commendation of this popular journal by prominent papers all over the country is evidence of merit, then it is by far the most meritorious periodical of its class in America. Of late, especially, its praise seems to emanate from a thousand papers between Canada and the Gulf, and the Atlantic and Pacific. And it is all deserved, for the RURAL has no equal in its sphere, being superior in ability and variety of contents, while, as we have before said, the dress, paper, engravings, printing, &c., are superb. Indeed, the RURAL NEW-YORKER is an honor to Rochester and Western New York, and has done and is doing much to make them favorably known in distant parts of our own land as well as abroad—for its circulation in the West, South, New England, Canada, &c., is large and rapidly increasing. Although its nineteenth year and volume does not commence until January, the RURAL is thus early receiving hundreds of letters and subscriptions daily, giving assurance of a large accession to its already immense circulation during the ensuing winter. Read the Prospectus of Vol. XIX in another column.—*Roch. Daily Union & Adv., Nov. 29, 1867.*

MOORE'S RURAL NEW-YORKER.—We can most conscientiously commend this excellent periodical as a *really first-class* agricultural, wool growers', graziers' and gardeners' paper. In all of these departments and others allied to them, there is in the RURAL NEW-YORKER a scientific thoroughness allied to plain practical utility, which entitles it to the highest praise. It is also an admirable family newspaper, containing much interesting reading of a varied nature, and truly artistic engravings. Price only $3 a year—the literary matter in it alone being well worth more, and the agricultural reading three times as much.—*Forney's Press, Phila.*

CAN YOU DO WITHOUT IT?—Without what? MOORE'S RURAL NEW-YORKER. We should say certainly not. It contains something interesting for every one that can read; but to the farmer it is invaluable. It is without doubt the best agricultural paper in the country. Read the prospectus in another column. It is a fact that the article in this case, is much better than the advertisement represents.—*Racine Advocate.*

THE RURAL NEW-YORKER, conducted by Hon. D. D. T. MOORE, Mayor of Rochester, has attained the largest circulation of any paper of the kind in the country or the world; and this pre-eminence has been achieved by careful management, first-rate tact, judicious enterprise and liberality.—*Rochester Daily Democrat.*

HORTICULTURAL.

DISCUSSIONS AT POMOLOGICAL SOCIETIES.

[The subjoined communications, written, as our readers doubtless recognize, by two very prominent members of the National Pomological Society, present just views of the aims and advantages of the Association. Let us have local and State organizations by all means, but a National Congress has likewise *its* necessary duties.—Ed.]

Under this heading it is stated in a recent number of this journal that the Germantown Telegraph has doubts of the advantages of a National Fruit Society—that even State Societies are too large and the objects can be better accomplished by County and Township Societies. I cannot agree with the Telegraph. All these Societies—National, State, County and Township—have their peculiar duties to perform.

A very large number of our best fruits are grown in more than twenty different States of our country, and when the fruit growers of all these States meet together they are not only able to compare their successes and failures and discuss their causes, but they establish an uniformity of nomenclature which is of vast importance. If our National Society had done no more than what it has in this single direction, it would have established its claim to the gratitude and support of every fruit grower in the land. Fruit culture is a great national pursuit, and those engaged in it, whether they are members of local Societies or not, look to it as the great central light which collects and combines the information locally obtained for the general good.

Nothing, in my opinion, redounds so much to the honor of American fruit growers, or gives stronger proof of their intelligence and enterprise, than the existence of the National Society and the work it has accomplished. It is the subject of admiration in Europe, where they are now following the example we have set them in this respect.

It is not at all strange that the grape should at the present time occupy a large share of attention. A whole catalogue of grapes has been ushered into existence within a few years, and grape culture is spreading over our land with a marvellous rapidity. Those engaged in it feel it to be a new pursuit, and they ask for each other's experience and advice.

The meeting at St. Louis was one of the most useful ever held, and one which, more than any previous one, illustrated the necessity for such a society. Cultivators residing more than a thousand miles apart, were brought together to interchange views and enlighten and encourage one another. Is this doing no good? The moral influences of such a society are so obvious as to need no comment. Then let every fruit grower in the land, North and South, East and West, join in sustaining our National Society, that it may push forward with vigor and success its great and good work.—B.

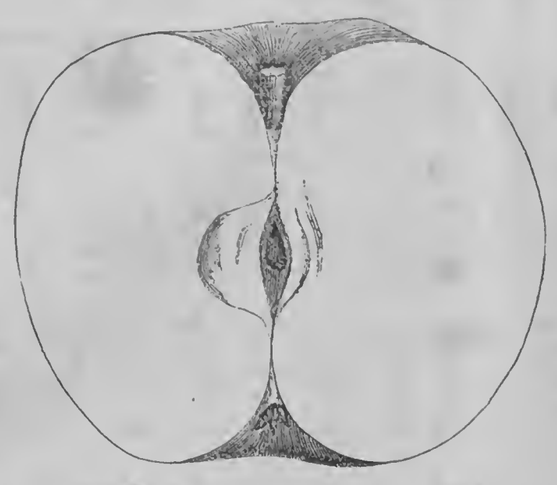
Under the above head I notice you quote remarks from the Germantown Telegraph derogatory to the advantages of discussions at Pomological meetings, and especially of the National Fruit Society. It is patent that pea-nut policy and foresight came from Pennsylvania, but I would not have supposed so intelligent a man as the editor of the Telegraph could decry the well-known advantages that have accrued to the fruit growers of the States from the information gathered at the meetings, and through the action of the American Pomological Society. It is certainly unkind in a writer to speak of the discussions at our large gatherings of intelligent fruit growers, when he himself never appears. True, human nature is given to talk, and men unaccustomed to condense thoughts in a few words, sometimes occupy more time than should well be; but in my knowledge there is less of wasteful wording in Pomological meetings than in any other gatherings where men are expected to speak their views off-hand of the subjects brought up.

I grant the advantage of County and Town Associations, but when they have gathered their knowledge, and one or more of their members brings it in mass before a National assemblage of like men of experience, it strikes me that the sifting it there gets ofttimes puts a flea in the ear of such member, who returns to his county or town associates with views and impressions that cause a complete remodeling of their remarks and practices. I advise the Germantown Telegraph editor to attend one or two meetings of the American Pomological Society, after which I think he will know more than he now does of the advantages gained by drawing together Pomological minds from all the States. Addi.

UNPRODUCTIVE APPLE TREE.

A subscriber from Jackson Co., Missouri, writes that he "would like to know through the columns of the Rural what to do for an apple tree that is large enough to bear ten bushels of apples, but which as yet has borne but few. It blossoms very full each spring, and nearly all fall off without producing any apples. It stands on good soil and has a thrifty appearance."

Our correspondent fails to give some points we should like to know to arrive at what must be any way nothing more than a suggestive opinion—whether it was a seedling or graft, and what the sub-soil and drainage is, and whether it stands among other trees. We have known seedlings very shy bearers for years, although blossoming fairly, and always supposed it was some defect in the organization of the blossom, being *pistillate* and without *stamens*, or the fructifying organ; a fact easily ascertained by examination. In that case, if standing among bearing trees it would become measurably impregnated. Trees standing in a springy, wet location, especially with a hard, retentive sub-soil, will always produce barrenness, and all trees making wood very fast will fail to be prolific, the cure for which is root pruning. We know of no such case as the apple tree being *dioccious*, that is the male and female organs on different trees. If the blossom is imperfect, cut it down and cast it into the fire.



JEFFERSON COUNTY APPLE.

One of our subscribers, Mr. O. V. Woodward, Rutland, N. Y., recently forwarded to us some specimens of an apple of which he remarks, in his accompanying note, "We call it a No. 1 apple; it is not much known out of this county, having originated here." It is described by Thomas, in his "Fruit Culturist," as "medium, roundish, regular; striped and shaded red on yellow; cavity deep; calyx small; basin deep, smooth; flesh crisp, tender, with a very good, mild, sub-acid flavor. Late autumn. Tree vigorous and productive." Our illustration was drawn from one of the specimens. It is a good late fall and early winter apple.

TREE DEALERS OR PEDDLERS.

Mr. Editor:—Your correspondents have recently been venting their indignation against dishonest tree dealers, or peddlers, as they are termed. This is quite right. It is never wrong nor out of place to censure dishonesty; but these traveling tree dealers do much good as well as some harm.

Is is not true that through their agency thousands of people are annually induced to plant trees who but for them would not plant? who would not sit down and write an order to a distant nurseryman for trees, nor would even travel ten miles to a nursery for them? Suppose they do commit errors—*willful* ones at that—is not the man better off who has planted, though they do not all prove true to name nor be of the best quality, than he who has planted none? Those who are very particular about procuring select sorts, true to name, will most likely take the trouble to go or send to a reliable source. I think this is generally the case.

I am not offering an apology for dishonest tree dealers. I regard them just as I do dishonest farmers, merchants or tradesmen. As to preventing this evil, we can do it when the whole world becomes honest—not before. May that time come soon!—B.

HORTICULTURAL GLEANINGS.

Magnificent Grape Cluster.—George E. Goodman, formerly of this city, but now in California, sends us a photograph of a cluster of the White Nice grape, which is a curiosity in its way. It was grown by H. M. Amsbury, on his ranch, two miles from Napa city. Its girth was thirty-two inches, and weight *eight pounds and one ounce*, though several berries had been shaken from it by transportation. Besides this cluster, the same party sent forward fine samples of White Muscat, Berger and Mission grapes.

Apples and quinces of corresponding size and excellence accompanied the grapes as evidences of the progress of fruit growing in the region of Napa City. The producer of these fruits hails from Connecticut, and is represented as among the most successful fruit and grape culturists in the State. The engraving given above is taken from the photograph sent us.

The Apple Crop—Niagara, Orleans, Monroe and Wayne Counties.—The shipment of apples from these counties to the eastern markets the present season were as follows:

Niagara, bbls....	174,418	Am't rec'd....	$	510,289 80
Orleans, "	180,157	" "		551,280 52
Monroe, "	87,000	" "		240,000 00
Wayne, "	90,000	" " est.		225,000 00
Total shipm'ts,...	531,575	" "		$1,526,570 32

From these figures it will be seen that four Western New York counties, poor as the season was for apples, sent to the eastern markets over a million and a half of dollars worth of apples the past fall.

Grape-Cuttings.—These should be secured before the wood has been frozen, cut into convenient lengths, and covered up in earth, unless they are wanted to start early in the propagating-house. Only the well-ripened wood should be saved for propagation. They may be buried in the ground or cellar, or any place where they will keep fresh, and, before being used in the spring, cut into single eyes, or such lengths as are preferred.

Cutting Scions.—Many good grafters prefer to cut their scions in early winter, before there has been much severe cold weather. It often happens that scions left on the tree until spring, will, when cut, show the pith of the scion quite black; and sometimes the wood itself is injured by the severity of the weather. Such wood should not be used; for many of the grafts will fail, however skillful the person may be who sets them. If cut in the fall, they should be kept fresh, either by burying in the earth where the water will not stand, or in moist earth in the cellar.

A Large Pear.—The Occidental and Van Guard, San Francisco, notices a mountain pear, grown by Thomas Campbell on his farm near Forest Hill, which it characterizes as "a pomological curiosity," and adds:—"As it stands on our desk its perpendicular height is 8¼ inches; its circumference, measuring around the bulge, 14¾ inches. The weight is a trifle over two pounds."

Peaches.—The New England Farmer states that Nathan Brooks of Acton, Mass, sold his crop of late Crawford peaches this year for six dollars per bushel. Time was in that State, within the remembrance of the writer of this paragraph, when good peaches, Massachusetts raised, sold in Springfield for fifty cts. a bushel.

Prolific Grape Vine.—A Mr. Stewart of Oxford, C. W., has a Clinton grape vine seventy feet long—thirty-five feet each way from the root. It runs along an eight-foot picket fence, which hung this year with one mass of grapes from end to end. He condemns the practice of cutting grape-vines back to five or six feet, contending that the leaders should not be cut at all.

TWELVE THOUSAND ACRES OF ROSES.

Mr. Blunt, the British vice-consul at Adrianople, in his report to the foreign office this year, gives an account of the rose fields of Adrianople, extending over 12,000 or 14,000 acres, supplying the most important source of wealth in the district. The season for picking the roses is from the latter part of April to the early part of June; and at sunrise the plains look like a vast garden full of life and fragrance, with hundreds of Bulgarian boys and girls gathering the flowers into baskets and sacks, the air impregnated with the delicious scent, and the scene enlivened by songs, dances and music.

It is estimated that the rose districts of Adrianople produced in the season of 1866 about 700,000 miscals of otto of roses (the miscal being 1½ drachms) the price averaging little more than 3s sterling per miscal. If the weather is cool in spring, and there are copious falls of dew and occasional showers, the crops prosper, and an abundant yield of oil is secured. The season in 1866 was so favorable that eight okes of petals (less than 23 pounds,) and in some cases seven okes, yielded a miscal of oil. If the weather is very hot and dry, it takes double that quantity of petals. The culture of the rose does not entail much trouble or expense. Land is cheap and moderately taxed. In a favorable season, a donum (40 paces square,) well cultivated, will produce 1,000 okes of petals, or 1,000 miscals of oil, valued at 1,500 piastres; the expense would be about 540 piastres—management of the land 52, tithe 150, picking 75, extraction 260—leaving a net profit of 960 piastres, or about £8 11s. An average crop generally gives about £5 per donum, clear of all expenses.

The oil is extracted from the petals by the ordinary process of distillation. The atter is bought up for foreign markets, to which it passes through Constantinople and Smyrna, where it is generally despatched to undergo the process of adulteration with sandalwood and other oils. It is said that in London the Adrianople attar finds a readier sale when it is adulterated than when it is genuine.

WINDOW PLANTS.

Window plants should not be kept very warm at this season. They should have all the sun and air, and as little of the artificial heat of the room as possible. These remarks apply especially to Mignonette, which is very impatient of in-door confinement. Succulents, such as Cacti, are excellent window plants in this respect, as the dry air does not affect them. To keep the air about the plants moist, is one of the secrets of window-culture. Some who have very fine windows well stocked with fine plants, make glazed cases with folding doors of them, by which, when the room is highly heated and very dry, they can be enclosed in an atmosphere of their own. In such cases, ferns and mosses can be grown to perfection, and pendant plants in hanging vases give a Brazilian forest appearance to our happy Christmas homes.—*Gardner's Monthly.*

Horticultural Notes and Queries.

To be Given Away.—An agent friend of the Rural has a quantity of "Hill's Sweet Corn" which he proposes to distribute free in packages containing enough to plant 20 or 30 hills. He recommends it as an excellent variety. Send a directed envelope, with stamp, to Cullen Loud, Egypt, Monroe Co., N. Y.

Philadelphia Horticultural Society.—At a recent meeting of this Society an election of officers took place. *President*—W. L. Schaffer. *Cor. Sec.*—Thomas Meehan. *Rec. Sec.*—A. W. Harrison. *Treas.* Henry A Dreer. Thos. P. James has charge of the Botanical Department, James C. Booth that of Chemistry, and S. S. Ruthven that of Entomology.

Turning a Lane to Good Account.—Mr. R. H. Brown, Greece, this county, has a farm lane about fifty rods long and three wide, both sides of which are set with apple trees, numbering in all one hundred and thirty. They have just begun to bear, and yielded over one hundred barrels of apples this year. Thus shade and fruit are gained and space economised.

Geranium Cuttings.—A correspondent of the Massachusetts Ploughman writes that paper thus:—"A year ago this fall, at the suggestion of an agricultural paper, we placed some geranium cuttings in a vase of weak suds. They formed new leaves, and were green throughout the winter and blossomed. In the spring one of them was transferred to a flower pot, and is growing now in spite of occasional mishaps."

Name Wanted.—(H. A. P., Niagara Co.) "I have a grape, presented to me some years since by a friend, of which I have never been able to learn the name. Can any of your readers inform me? It bears very large bunches of large purple berries, is very compact, not shouldered, and does not part from the skin when eaten, but like the Chasselas, or the Yellow Spanish Cherry, seems to be all meat, ripens late, and the wood is of a reddish color."

ESTABLISHED 1861.

THE GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship Golden State,
12,000 HALF CHESTS by ship George Shotton

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

Oolong (Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₩ lb.
Mixed (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₩ lb.
English Breakfast, (Black,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,20 ₩ lb.
Imperial (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
Young Hyson (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,-10, best $1,25 ₩ lb.
Uncolored Japan, 90c., $1, $1,10, best $1,25 ₩ lb.
Gunpowder (Green,) $1,25, best $1,50 ₩ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 30c., 35c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House-Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. ₩ lb., and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

The funds to pay for the good ordered can be sent by drafts on New York, by post office money orders, or by Express, as may suit the convenience of the club. Or if the amount ordered exceed $30, we will, if desired, send the goods by Express, to "*collect on delivery.*"

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third (**beside the Express charges,**) by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

POST-OFFICE orders and drafts make payable to the order of The Great American Tea Company. Direct letters and orders to (as below, no more, no less)

GREAT AMERICAN TEA CO.,
Nos. 31 and 33 Vesey-St.,
NEW YORK.
Post-Office Box 5,643 New York City.

New Advertisements.

A COUGH, a COLD, or a SORE THROAT, Requires immediate attention, and should be checked. If allowed to continue,

Irritation of the Lungs, a Permanent Throat Disease, or Consumption,

is often the result.

BROWN'S BRONCHIAL TROCHES

Having a direct influence to the parts, give immediate relief. **For Bronchitis, Asthma, Catarrh, Consumptive and Throat Diseases,** Troches are used with always good success.

Singers and Public Speakers use them to clear and strengthen the voice.

Obtain only "Brown's Bronchial Troches," and do not take any of the worthless imitations that may be offered. Sold Everywhere. 933 3mo

BRADBURY'S FRESH LAURELS

Is his latest, most popular and splendid music book for Sabbath-schools. The music is new, fresh and very attractive. Hymns—short, earnest, **full of Gospel truth,** and adapted to every occasion. EVERY Sabbath-school must have "LAURELS" sooner or later. The author says:—"I never made a book that was so perfect and at once so popular, and gave such **universal satisfaction.**" Price $25 and $30 per hundred. Send 25 cents for specimen copy.

WM. B. BRADBURY, 425 Broome St., New York.

THE BEST ARE THE CHEAPEST.

THE MASON & HAMLIN CABINET ORGANS have just been awarded a FIRST PRIZE MEDAL at the Grand Exposition in Paris, in competition with instruments from the best makers of all countries. This makes over SEVENTY HIGHEST PREMIUMS awarded them within a few years. Testimonials from more than three hundred of the most prominent musicians in the country that these instruments are unequalled, are published in the circulars of Mason & Hamlin.

Observe that dealers in musical instruments are strongly tempted to recommend as equal to the best, those instruments on which they can make the largest profit. The prices of M. & H. are fixed and invariable. They cannot afford the large discounts made by manufacturers of inferior work, many of whom sell at 40 to 50 per cent. discount.

At the prices at which they are sold, the Mason & Hamlin Organs are believed to be not only the best but the cheapest instruments of their class. Send for a circular, with particulars, to MASON & HAMLIN,
596 Broadway, N. Y., or 154 Tremont St., Boston.

WILLIAM MASON AND E. S. HOADLEY'S
New Method for the Pianoforte.

Already a second edition of this new work is ready and nearly sold in advance. It is new in method and matter, embracing modern exercises and expedients not heretofore presented, while its selection of Exercises, Recreations and Pieces, mostly from composers of recognized eminence, is unusually large and very choice.

This is the first instruction book to include the technicals of modern pianoforte playing. It has a full elucidation and illustration of Mr. Mason's new system of Accentual Treatment of Exercises, by which the attention of the pupil is almost compelled, and careless practice is rendered nearly impossible, while not only the hands, but also the mind, taste and artistic perceptions are cultivated and trained.

It is eminently a practical work, the result of long and most successful experience in the actual business of pianoforte teaching. It is carefully progressive, very clear and perspicuous and full in its explanations and directions, illustrated by cuts and diagrams, and is adapted to the use of young beginners as well as those who have made progress. 240 pp., large 4to. Price $1. Two editions are published; one with AMERICAN and one with EUROPEAN FINGERING. Care should be taken to designate which is wanted. Published by
MASON BROTHERS, 596 Broadway, New York.
MASON & HAMLIN, 154 Tremont St., Boston.

Ladies' Department.

MORNING AND AFTERNOON.

BY PHŒBE CARY.

FAIR girl, the light of whose morning keeps
The flush of its dawning glow,
Do you ask why that faded woman weeps
Whose sun is sinking low?

You look to the future, on, above,
She only looks to the past;
You are dreaming your first sweet dream of love,
And she has dreamed her last.

You watch for feet that are yet to tread
With yours, on a pleasant track;
She hears but the echoes dull and dread
Of feet that come not back.

You are passing up the flowery slope,
She left so long ago;
Your rainbows shine through the drops of hope,
And her's through the drops of woe.

Your night in its visions glides away
And at morn you live them o'er;
From her dreams by night and dreams by day
She has waked to dream no more.

You are reaching forth with spirit glad
To hopes that are still untried;
She is burying the hopes she had,
That have slipped from her arms and died.

You think of the good, for you in store,
Which the future yet will send;
While she, she knows it were well for her
If she made a peaceful end!

Written for Moore's Rural New-Yorker.

AUNT DORCAS ON SAVIN'.

BY MAY MAPLE.

How'D ye du Mis' BROWN; I'm wonderful glad you've come over here; I've been wantin' to seen you ever since I got back from my visit to my son's. You know I've been gone three or four weeks. Here, SARA ANN, you come and take Mis' BROWN'S bonnet and shawl and lay 'em on the spare bed.

Well, as I was sayin', Mis' BROWN, I've been wantin' to see you ever since I got back. You know JOSIAH married MARTHA PAYNE; well, if he realized half how things was goin', he'd think he'd got a pain in good 'arnest. It's enough to put one on the rack jest to see how things is wasted there, in that house. She keeps two hired girls all the time, and she works with 'em a good 'eal of the time, and they don't all three manage to du as much in a week as I could du in half that time, even now, and I'm ena-most seventy-four years old. And then jest to see the waste;—whole pans full of dried bread thrown into the swill barrel every week. Once I asked MARTHA to let me have some o' the dried bread. She was willin' I should have as much as I liked, though she couldn't see what I could want of those hard crusts. I told her I wanted to make a puddin'. I picked out some of the best,—for some, of course, had got musty,—and crumbled into a pan of milk, and let it seald till the crumbs were all soft; then, I beat an egg with a cup of sugar, and as much sweet cream, and stirred into the pan of bread and milk; this was set into the oven and baked. And I tell you, Mis' BROWN, they all thought it was delicious, especially the children. They wished grandma would make puddin's every day.

Why, la sakes, Mis' BROWN! I never thought of losin' a piece of bread as big as my hand,—and my old man used to think I had the purtiest little hand of any body, in our young days,—from one year to another, when I was keepin' house. If I chanced to have any bread git dry, I either made puddin's, pancakes or toast of it; and it was eaten with a good relish. But hired girls never seem to care how much they waste.

One day they were goin' to have a great lot of men to dinner, so MARTHA told the girls they might boil some meat and veg'tables. Dinner was served in good order,—for MARTHA would have her table look well, if nothin' else did about the house. In the course of the a'rternoon MARTHA and I went down to the orchard,—and, by the way, JOSIAH has some of the finest fruit I ever did see; when we came back she said if I wasn't too tired she'd like me to see what a fine garden they had. Tired, mercy! I did't think of such a thing. But the garden was very flourishin'; there were all sorts of veg'tables; a good many of them had for'in names to 'em. But the fence did'nt speak very well for my son. I told MARTHA I's afraid they'd lose half o' their garden if JOSIAH didn't have the gate fixed and a new fence. She said she'd tried to have him fix it up; but he hadn't got quite ready to do it. We went in by the way o' the wood-house, and here I chanced to cast my old eyes towards the swill barrel, that stood near the door. I never saw anything beat it in my life. Says I to MARTHA, "What makes this look so funny?" and I pointed to the barrel. She went to look, and there the clear, white grease lay more than half an inch thick, that had been thrown in there from the boiled dinner.

She called one of the girls and told her to skim it off, and cleanse it, and put it by with some other for soap grease. While we stood there talkin', JOSIAH came in, and, of course, she had to tell him about it. "Well," says he, "I shouldn't be surprised to find two or three pounds of pork, a pie or so, and any quantity of bread, now; it wouldn't be the first time." And he took the old dipper and began stirrin' up the contents. And sure enough, there it was, jest as he said. MARTHA was surprised, to say the least.

"If pork wasn't bringin' a good price I couldn't stand so much waste," was his remark, and away he went laughin' to see the look o' dumb surprise still on his wife's face.

You know JOSIAH is one of the easy ones, he never lets anything trouble him long at a time. Afore the week was out, the hogs were in the garden, and destroyed a good sight of his veg'tables. The next mornin' MARTHA asked JOSIAH if the price of pork was still goin' up, that he could afford to keep the hogs in the garden.

Come again, Mis' BROWN, and I'll tell you about my house keepin'.

WHAT A WOMAN CAN DO.

THE Milwaukee Wisconsin publishes the following interesting account of an enterprising lady just married in that city:

A young lady at the East, dependent upon her own resources, was adopted into the family of a gentleman in this city. This gentleman was transacting a business of millions of dollars annually, and employed numerous clerks and accountants. The young lady alluded to was taken into the counting room and soon rose to the position of chief book-keeper and cashier of the house. She filled the position and performed the duties with singular fidelity and satisfaction for several years. All the large transactions of the house passed through her hands: the daily cash transactions alone amounting to $20,000 to $50,000.

We had the satisfaction of examining this set of books, and can truly say that no accountant in Milwaukee can show a better record of neatness and accuracy. Several bankers have also examined the work of this young lady, and pronounce it well nigh faultless. The young lady has balanced her books, closed her accounts, and left her position to take charge of the personal and household affairs of a young business man in a neighboring city.

GOSSIPY PARAGRAPHS.

THE "music of the belles" is caused by the gabbling of their tongues.

BLUE-EYED girls gather the vintage alongside of the men in Switzerland, and they have a dance after each day's work. Work is fun if it's done right.

A MODEST pair in the Nutmeg State announce that their golden wedding will come off just 30 years from now, and offer a liberal discount on any presents their friends then design to make them.

A WESTERN girl tried to drown herself because her lover refused to marry her, but she only got into a quagmire up to her knees, and it took Henry half an hour to scrape the mud off from her stockings.

KISSES, like the faces of philosophers, vary. Some are as hot as a coal of fire, some as sweet as honey, some as milk, some as tasteless as long-drawn soda. Stolen kisses are said to have more nutmeg and cream than any other sort. So saith a Fanny-fernal sister.

AT a wedding, recently, when the officiating priest put to the lady the question: "Wilt thou have this man to be thy wedded husband?" she dropped the prettiest courtesy, and with a modesty which lent her beauty an additional grace, replied: "If you please."

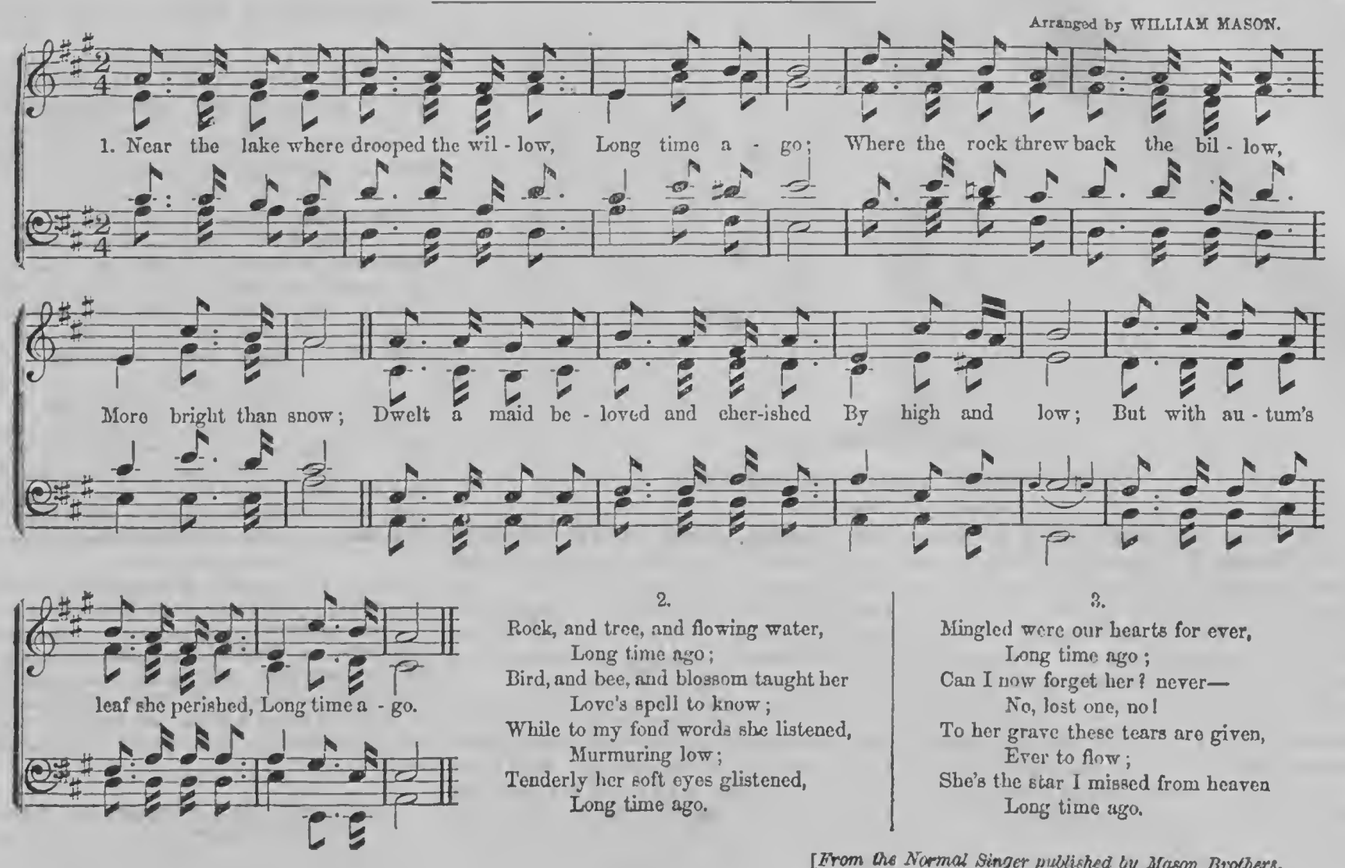
DR. BROWN having long admired a very beautiful young lady, made a point of always giving her for his toast. Being once told it was time to change, he replied: "I believe it is, for though I have been toasting her for these twenty years, I have not been able to make her Brown yet."

AN engagement ring given in Brooklyn, L. I., is thus described: "It is made of plain gold, in which is set a single diamond, of remarkable brilliancy and great value. The setting is entirely new in design, and the engraving on the inside beautifully executed. The wording of the inscription is novel and beautiful, being as follows: "From —— to ——October 20, 1867. Each for the other and both for God."

BRIGHAM YOUNG has issued an edict ordering all the young men in his domain to marry, and not to stand upon the order of their marrying, but to marry at once. If this measure of policy does not soften the hearts of all the fair in Christendom towards the Mormon chief, we don't know what would. Only think of the effect which such an order from some competent authority in the State of New York, would produce!

"NEAR THE LAKE WHERE DROOPED THE WILLOW."

Arranged by WILLIAM MASON.



2.

Rock, and tree, and flowing water,
Long time ago;
Bird, and bee, and blossom taught her
Love's spell to know;
While to my fond words she listened,
Murmuring low;
Tenderly her soft eyes glistened,
Long time ago.

3.

Mingled were our hearts for ever,
Long time ago;
Can I now forget her? never—
No, lost one, no!
To her grave these tears are given,
Ever to flow;
She's the star I missed from heaven
Long time ago.

SENTIMENT VS. SENSE.

SOME people are poets, more are not; some soar upon the wings of fancy, others plod along on foot; some subsist upon ambrosia and distilled nectar; the majority eat bread and potatoes. It's a fine thing to be able to make poetry; it's doubtless rare sport to fly; and the food of the gods may be very palatable to those who relish it; but it is well that a large proportion of the human race are content to find their employment, food and means of locomotion within the limits prescribed by our earthly constitution. Did everybody take to soaring, somebody would come to want. Life is real, and they who live must needs conform to its laws. Star-gazing is a sublime occupation, but does not secure its followers against falling into ditches.

Nature is full of beauties, and to be incapable of appreciating them is to be narrow-minded; but there is such a tendency on the part of many people to give undue prominence to that which should be only secondary, and, still worse, to affect exquisite sensibility in the most commonplace affairs, that the term *sentimental* has come to be synonymous with *soft*. These people lose sight of the practical in their eager contemplation of that which appeals to what they call the finer feelings. They forget that the chief end of man cannot be attained by indulging in idle fancies, or by gazing admiringly upon gorgeous sunsets. They will go into ecstacies over a well-defined rainbow, and will talk eloquently of the exquisite blending of hues; yet let them be called upon to stripe the colors in a rag carpet, and they will frankly and fearlessly acknowledge that they have no taste in that direction. So far from combining the *dulce* with the *utile*, they leave the *utile* out of the question entirely.

Really, the more one thinks upon the subject, the more he will be convinced that sentiment is all nonsense. We have to deal, for the most part, with things practical. We are placed here upon earth to make a living, be good and do good; and whatever goes beyond this is, at least, superfluous. He who does this much and does it well, will find little time or inclination to indulge in aerial flights and fruitless fancies. One may sit at his window for three-fourths of the evening, drinking in, with greedy eye, the splendors of the starry heavens, and may profess to be stirred to the very depths of his soul with sublimest emotions; meanwhile his fire will go out and he will catch a sore throat.

A friend of mine assures me that it is the highest kind of enjoyment to wander through the forest in summer weather, to seat one's self upon the trunk of a fallen tree, and there to muse. But while seated securely upon the log, elevated above all sublunary cares and perplexities in a sublime appreciation of the unspeakable grandeur of the enchanting scene, or enveloped in the glorious mists arising from your own fertile imagination, snakes and lizards are crawling beneath, and worms and spiders, and all manner of noxious vermin are quietly making their way in home-like fashion over every portion of your garments. Now, an arm-chair in a well-furnished parlor may be a less romantic place in which to muse, but I cannot conceive why it should not be considered quite as agreeable, and it is a thousand times more tidy. This same friend is apt to become enthusiastic over the crystalline beauties of a simple snow-flake, and to expatiate in glowing language upon old Mother Earth enveloped in a fleecy mantle of purest white. But, alas! all the poetry and most of the substance of snow melt into nothingness, when compelled, week after week, to supply the place of cistern water. But my friend is sincere, is really susceptible of very delicate impressions, which cannot be said of the many.

There are those who will go into raptures upon beholding a beautiful landscape, and will do the same thing at the sight of a finely embroidered pin-cushion. They have a nice appreciation of the beautiful, the sublime, and the awful; but unfortunately, are unable to distinguish one from the other. They will stand beneath Niagara, and listen to its mighty thunderings, and behold far above them the resistless flood rushing down with a might and majesty such that the truly sensitive mind can but lose itself in the contemplation of GOD and eternity, and amidst the dashing of the spray they will exclaim, in the fullness of their unbounded enthusiasm, "Isn't it sweet?"—in precisely the same tones in which they would speak of a pet kitten.

What a waste of exclamation points there has been since the world began!—especially in these latter days, when, on every conceivable occasion, we must say, "How lovely!" "How glorious!" "How splendid!" What is the use of it? How does it benefit right minded, intelligent men and women who are made to do good in the world, to cultivate this sickly sentimentality which leads to dreams, and reveries, and sighings, and, finally, murmurings and discontent?

L. R. MELLIS.

HIRAM POWERS.

A CORRESPONDENT of the Cincinnati Gazette, writing from Florence, says that most Americans had absented themselves from the city, owing to fears of the epidemic. He, however, found HIRAM POWERS hard at work in giving his finishing touches to the "Last of the Tribes." It represents an Indian girl looking back toward the scenes of childhood as she departs forever. The sculptor is likewise at work upon a model of his dead friend, EDWARD EVERETT. It is to be given as a present to some society or association at home. Though considerably advanced in years, Mr. POWERS has an erect form and a cheerful, youthful countenance. Alluding to his earlier labors, he said the plaster bust of the first President of Miami (Ohio) University was one of the first two or three works executed by him. Since its completion he has spent seven years in the Western States, three years in Washington, and thirty years in Italy. He affirmed that, except in the matter of finish, he had never surpassed his earliest attempts.

SANDWICHES.

IDLENESS buries a man alive.

THE language of the sole—creaking boots.

PROUD looks lose hearts, but courteous words win them.

WHAT is better than a promising young man? A paying one.

THE oldest business in the world—the nursery business.

IN prosperity we need moderation; in adversity, patience.

HE who has good health is a rich man and rarely knows it.

A GREAT mind will be easy in prosperity, and quiet in adversity.

WHAT kind of a face should an auctioneer have? A face that is forbidding.

HE who asks no questions is queer, but he who asks many questions is the querist.

LEARNING is wealth to the poor, honor to the rich, and a support and comfort to old age.

WHO aims at excellence will be above mediocrity; who aims at mediocrity will fall short of it.

PRESENCE of mind is doubtless good in very many cases, but in nearly all of them absence of body would be decidedly better.

THE man who knew no North, no South, no East, no West, was found to be as deficient in other matters as in Geography.

"WELL, George," asked a friend of a young lawyer, "how do you like your profession?" "Alas! sir, my profession is better than my practice."

BROWN the other day, while looking at the skeleton of a donkey, made a very natural quotation. "Ah," said he, "we are fearfully and wonderfully made."

ONE of a party of musical friends referring to an exquisite musical composition, said: "that song always carries me away when I hear it." "Can any one sing it?" asked Jerrold.

Sabbath Reading.

GIVING.

BY ADELAIDE STOUT.

O! nerves that vibrate to the touch
More quickly than the wire
O'er which electric currents run;
O! slow consuming fire
Within my soul, in vain, in vain,
The small hands come to me
With hollowed palms,—they only touch
My soul to agony!

In vain the little hand doth catch
My drapery's somber fold,
I scarcely count enough of wealth
To fill its tiny hold;—
Ah, yes! I have enough—of pride;
My cheeks' concentrate glow,
The white, white ashes of my lip
Its smothered fire do show.

A child's quick impulse stirs my heart,—
Too proud to learn to dole
Its scanty pittance out, to throw
For any hand the whole,—
My very soul is sick to hear
The dull metallic ring
The mite makes, in the treasury,
That scornfully I fling!

* * * * * *

O, heart, a gentler mood steals o'er!
My GOD Thy hand hath smote
The rock: the long pent waters gush,
Sweetly beneath Thy stroke!
The nerves that innate pride hath braced
Like firm, cold bands of steel,
Trill with the sympathy that runs
From heart alive to feel

The woe of others; yet how firm
To bear the brimming cup,
The small, sweet charity that love
Bends *low* in dipping up;
And "in Thy name" the cooling draught
With ready hand I lift,
"As unto Thee," O, CHRIST, bestow
Meekly the smallest gift!

CHARITY.

"BUT the greatest of these is charity." Faith and hope are good, even full of excellence, but of the beautiful trinity spoken of by the apostle, charity is best.

It seems to us that now is the fit time to preach a short sermon on charity,—now, when the cold of unkind Winter chills many a hearthstone where the fire burns low. There is a sweet charity in the Summer for all the poor and needy. The warm air and glad sunlight are theirs in a peculiar degree—theirs for blessing. They have common lot in all the joy of the long, balmy days. All the peace and plentifulness of seed time and harvest are theirs; but these fade away with the green leaves and the flowers.

From the dreariness of Winter every warm glow of charity dies out. All the gladness and brightness and cheer of the chilling days is forced and artificial. GOD pity and help those who have not the means to produce it! For such, the hope and faith are all that remain—others must have the charity. Such may hope for the swift coming of sunnier hours—others must aid them as they may in wearing off the leaden present.

"The poor ye have always with you, and whensoever ye will ye can do them good;" more especially are they your care when the summer's charity is withdrawn. A passably good Samaritan may go by "on the other side" when the skies wear a smile for all, and there is warmth and love in the air; but when the blasts cut keenly, and the cold is sharp and piercing, he who thus goes by is no Samaritan at all. Dole out your miserable pittance, O ye rich and prospered ones, when the collection plate is handed around, but think not that thus are the ends of charity fully met. "*Whensoever ye will*,"—and when will you? Once a week; or at every opportunity? Spasmodic generosity is weak and narrow. It lacks heart, and is not reliable. But that kind whose "whensoever" runs along through all the hours, and seeks its objects everywhere and always, is the noble and true.

Sitting by your glowing grates or well-laden boards, be not wholly unmindful of grates where the ashes are cold, and of tables that want food. Such are "always with you," nearer than you may suspect. Out of your abundance you may give much; even out of your moderate hoard that may be bestowed which will create warmth and cheer where are only dreariness and gloom. Great gifts can have scarcely more power to bless than the small, sweet charities proceeding from generous and sunny hearts. These may be love and light and life to many who hunger for something more than food; and shall they not be granted?

MONEY CHRISTIANS.—In regard to some of the fashionable and rich churches in New York, the Rochester Democrat correspondent says:—In fact, the wealthy churches in New York do not want a poor man either in their pulpits or their pews. There is such a strong money-worship prevalent in these societies, that a sermon becomes better by degrees, represented by the weight of the preacher's purse. "I like to hear Dr. —— preach," exclaimed a purse-proud saint. "He is one of our class and can feel for us." For every $10,000 in the preacher's inventory his sermons are the better, and to suit the place perfectly he must indeed be a D. D. in the full significance of the title "dollars," "dollars."

FAITH AND PRACTICE.—We should act with as much energy as if we expected everything from ourselves: and we should pray with as much earnestness as if we expected everything from God.—*Fuller.*

The Traveler.

Written for Moore's Rural New-Yorker.

LOUNGINGS.

BY OLOFFE THE DREAMER.

V.--"THE LAST STEP."

THE "Bay Queen" is steaming down the Narragansett this coquettish autumn day, and on either side of the two hours' ride, with the stiff breeze square in the faces of those of us who are more anxious for enjoyment than to be cooped up in the close cabin, we glide past Rocky Point, with all the nature-beauties which must be studied over and over to be learned by heart, and where millions of innocent clams find appreciative graves every season;—past Nayatt, with the erect, sentinel light-house, which keeps continual guard over the "Woodbine Cottages" and quiet summer-dwellings of the few who love the place, and a little one side of which, two piers—one in ruins, the other with the freshness of continued renewal—parallel the chameleon waters like emblems of life and death;—past Prudence and Patience, the moveless sister-islands, and the nestling Bristol which gives back the sunshine from hundreds of glittering city points; and then we dislodge ourselves from the puffing boat on the wharf at NEWPORT.

But all voyages are not the smooth cleavings of Narragansett. We

"—— love and live on change,
Till the soul sighs for sameness, which at last
Becomes variety and takes its place,"

and even in our dream-journeys we once and again image storms, which, like MICHAEL SCOTT'S familiar spirit, will not always down at our bidding. Yet, after the cloud comes sunshine; after the storm, calm, and

"When the shore is won at last,
Who will count the billows past?"

Driving over the long beach, almost to Purgatory, or on the smooth avenue which passes the great hotels, meeting here and there remnants of the "season," shaped in low pony-carriages, with their immense parti-colored sun-shades,—or sitting on rude seats, overlooking the long row of bathing houses, just in hearing of the muffled tide as it advances and recedes on the sandy beach, talking meantime of unrecallable things, and thinking unutterable ones,—and the morning hours leave us.

To-day is a "beautiful day with the fairies," and as I turn my kaleidoscope at leisure, and, when some gorgeous combination meets the eye, hesitate to apply the touch of new creation,—I wonder if there are many of POE'S wicked inventors, who, to spare thought and economize fancy, have established joint-stock companies to twirl the little instrument by steam.

Through a meadow, over a stile, by the very edge, almost, of the high bank, and we gain the Forty Steps. Shall we sit on the "Last Step" and listen to the waves? Ah, they tell of wondrous things. The heaven clouds, and they whisper of remembrance. Anon the sun peeps through some little rift, and they murmur of hope. Then full and strong shine the beams on the restless water, and we listen to woolngs of love. And then the shadow comes again, and the foam seems shuddering like death.

The young hearts, who have sat here on other days, lingering, even like us, weaving the thread of their own lives in looms of glittering hope, or fancying the love of a poet's heart to be theirs, making up the gloriousness of something beyond,—perhaps are sleeping loving, sweet sleep, or maybe, with the iron hand of disappointment bearing down their arms, have forgotten to keep true to their dreams,—have folded their inner selves close in the dead memories.

The chill air has driven away well-nigh all the revellers from the shores of the Bay of Rhode Island. But the echoes are ringing yet of the golden summer.

"All night have the roses heard
The flute, violin, bassoon—
All night has the casement jessamine stirred
To the dancers dancing in tune;

"Come into the garden, MAUD—
I am here at the gate alone,
And the woodbine spices are wafted abroad,
And the musk of the roses blown."

Yet she comes not. For her—

"—— the revel of life is done—
Ah, beautiful MAUD, you never will miss
The kisses another hath won."

AND on the Last Step we read the "Day Dream," thinking, perhaps, of him who, in the old story, went in search of the water of oblivion, loving his life only for the dear ones who were to be disenchanted by his success.

How many there are of us, who would be, humanly speaking, infinitely better and happier if we could but begin again,—if we could take a fresh start, far away from all those who have been so thoroughly cognizant of our folly and childishness,—making for ourselves a new career, wherein we could forget those things which are behind, and reach forth unto those things which are before,—strong in our weakness, measureless in our confidence, triumphing through our loneliness and friendliness. But ah, it is only in Utopia that our possibilities achieve and conquer;—and yet some day, when life's oars are silent, and the hands that have blisteringly tugged so long against the sluggish currents, are folded in restfulness, we shall look through dust to spirit, shall see where the golden pencil of the Sun of Righteousness has written the Evermore of Eternity.

I have been lingering at Nayatt, reading destinies in the quiet waves that kiss the green shore in cooing ripples,—peering through the thick foliage of the little glen, as it rustles in the sad breeze,—or following some fairy footstep which beguiles into an untrodden future with shadowy promises of bright realizations to glad hopings,—and then back, all alone, to friendly Providence again, thinking of the Seashore Idyl of the dead poet—

"The waves grow calm in the dusk of eve,
When the wind goes down with the sun;
So fade the smiles of those who deceive
When the coveted heart is won.

"This sea-weed wreath that hangs on the wall,
She twined one day by the sea;
Of the weeds, and the waves, and her love, it is all
That the Past has left to me!"

Well, I have written the last of my loungings. The haziness of the autumn is gathering chillness more and more, as love and beauty wrap themselves in the mist of memory. The filling in of the restful hours has been all pleasant, and now, looking back on the shifting scenes of the glad day's fancy, I seem to see again the beautiful face, with its sweet, bright constancy, of the Fairy Princess, who, listening to the surge, to TENNYSON—and to me, sat by my side one dreamy September day on the Last Step of the Forty Steps at Newport.

"It is out of our pain and our patience that GOD brings us beautiful answers. It is well for us. But if such answers do not come? That also is well."

Various Topics.

PEDESTRIANISM.

As a people, we have a curious habit of running wild over an idea. A felicitous thought is at once popularized, and ranges across the country as common property. A "sensation" is sensationalized from Maine to California in a wonderfully short period. We hear a taking song, and make ourselves hoarse with it until it is absolutely sung out. We carry everything to the extreme, and in our peculiar zeal often make a wise and good thing seem absurd and foolish.

Hero-making is our forte. We have developed that talent in a degree almost astonishing. Compared with us, in this respect, other peoples are nowhere. It takes a quarter of a century to properly finish up a hero, in staid old England. In France they are more lively, and can do it in a decade. *We* can complete a most beautiful one in a week! Grant that to-day a man accomplishes something novel, if not deserving, in the sober city of Boston: three days hence he will be immortal all the way to San Francisco. We immortalized SAM PATCH, and BLONDIN, and Japanese TOMMIE, and the Prince of Wales; (England and posterity ought to thank us for the last,) and now WESTON, our last and best work, stands out high in the proud Temple of Fame, (in Chicago,) a noble creation in white hat and heavy brogans, and some other little articles of apparel. He has pedestrianated from "away down East" clear to the little village on the shore of Lake Michigan, and fifty thousand people beside his wife have received him with open arms. Already has he been nominated for the Vice Presidency, though as he is said not to be a vicious young hero we don't see the fitness.

The West has ever been positive. But they are improving. The latest semi-national Grammar renders it West, Weston, *Weston-est*—positive, comparative, superlative—and the latter being liberally translated means WESTON *is*—some. "*To be or not to be*" is a question wholly superfluous. He walked into the proud temple aforementioned, (we do or do not refer to CROSBY'S Opera House,) and has spoken his piece, as another conqueror did when he said "*veni, vidi, vici*," &c.

But to be serious. The young man who has performed the most remarkable feat, of the kind, on record, has demonstrated human endurance bravely. He deserves to be feted. (We rather think if we had footed it over twelve hundred miles against time we should need to be *fete*-feeted.) While there may be something extremely ludicrous in the universal walking fever caused by his tramp, we hope it will calm down to a healthy tone, and be productive of good. Walking is splendid exercise, but it has been sadly neglected in this country. The English do better: instance CHARLES DICKENS, who takes daily rambles of ten miles, outside of Boston. Our people have patronized street cars and busses too much for their own good. Nearly every person would be benefited by a pedestrian excursion of three or four miles per day. We used to do considerably in the way of pedal locomotion, and will say that when we were in the habit of walking from five to ten miles each day we enjoyed better health than we ever have since. Let every one get a *Walker's* dictionary, (WEBSTER'S is best, but it isn't *effete*,) and practice tramping for a while, and by-and-by they will be able to foot anything unless it be their gas bill or their taxes.

NEVER TOO OLD TO LEARN.

SOCRATES, at an extreme age, learned to play on musical instruments.

Cato, at eighty years of age thought proper to learn the Greek language.

Plutarch, when between seventy and eighty, commenced the study of Latin.

Boccancia was thirty-five years of age when he commenced his studies in light literature; yet he became one of three great masters of the Tuscan dialect, Dante and Petrarch being the other two.

Sir Henry Spelman, neglected the sciences in his youth, but commenced the study of them when he was between fifty and sixty years of age. After this time he became a most learned antiquarian and lawyer.

Colbert, the famous French minister, at sixty years of age, returned to his Latin and law studies.

Ludovico, at the great age of one hundred and fifteen, wrote the memories of his own times.

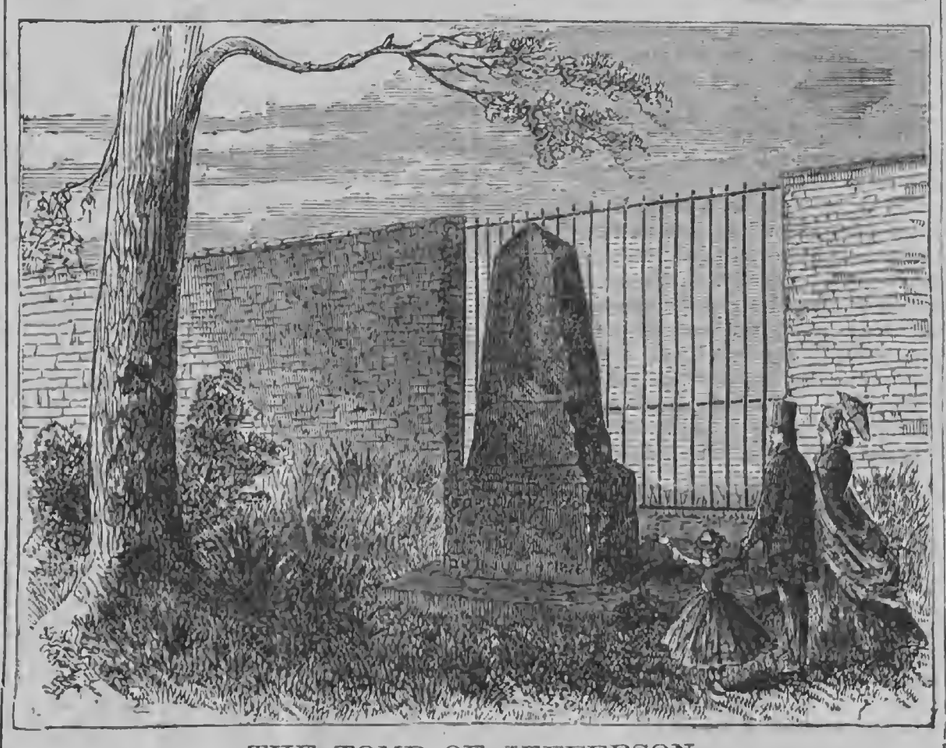
THE LATE FITZ GREENE HALLECK.

FITZ GREENE HALLECK, who died recently at Guilford, Conn., was born at the same place in July, 1795. A few years before attaining his majority, young HALLECK removed to New York and entered the banking house of JACOB BARKER, where he remained for many years. For a considerable length of time prior to the decease of JOHN JACOB ASTOR, HALLECK was employed by that wealthy merchant, and so far gained his esteem as to be named as one of the original trustees of the Astor Library, a position which he filled up to the time of his death. His lines to "Twilight," the earliest in date of his collected poems, were printed in the New York Evening Post in 1818; and in the following spring he assisted J. RODMAN DRAKE, a warm personal friend, in the preparation of the humorous "Croaker" papers for that journal. The death of Mr. DRAKE in 1820, compelled a conclusion of the series of papers, and Mr. HALLECK commemorated the departure of his beloved friend in a most touching poetical effusion, commencing—

"Green be the turf above thee,
Friend of my better days,
None knew thee but to love thee,
None named thee but to praise."

In 1819 he produced an amusing satire entitled "Fanny," written in the measure of Byron's "Don Juan," and criticising the follies, fashions and public characters of the day. In 1822 he visited Europe, and upon his return published an edition of poems, among which "Alnwick Castle," "Burns" and "Marco Bozzaris" have achieved the greatest popularity. The latter poem is familiarly known throughout the whole country, and more or less so, perhaps, in European literary circles. His reputation, however, rests mainly upon some of his poems published in earlier works. Mr. HALLECK was accustomed in life to pay a yearly visit to New York city, where, for two or three weeks, he enjoyed the society of artists and the leading literary men of the nation, all of whom looked with pleasure to his coming, and delighted to do the distinguished old man reverence. The good old man has passed away; but from every school-house in the land the story of Marco Bozzaris will be declaimed for generations, and teachers will tell their pupils that, like the hero of the poem, FITZ GREENE HALLECK'S is

"One of the few, the immortal names,
That are not born to die."



THE TOMB OF JEFFERSON.

IN last week's RURAL we gave a fine illustration of the Home of JEFFERSON, and now portray the great Statesman's final resting place. It will be seen that the monument which marks it is plain and unpretentious, simple in design, and bearing but a simple inscription. We have had kingly men in our brief national history, but their tombs are no royal sarcophagi. They are the people's dead, and they sleep where the dead of the people sleep, while their memories linger in the hearts of all. We need no Westminsters for our dead royalty.

Ogilby, the translator of Homer and Virgil, was unacquainted with Latin and Greek until he was past the age of fifty.

Franklin did not fully commence his philosophical pursuits until he had reached his fiftieth year.

Acceroso, a great lawyer, being asked why he began the study of law so late, answered that indeed he began it late, he could, therefore, master it the sooner.

Dryden, in his sixty-eighth year commenced the translation of Iliad, and his most pleasing productions were written in his old age.

TRUTH, wisdom, love, seek reasons; malice seeks only causes.

THE RIGHT WHALE.

IT is the general belief among whalers that the sperm whale is dying out, the number having decreased so much as to render it difficult to obtain a full cargo. The right whale, however, still maintains its own in the Pacific ocean, only shifting its grounds to regions more and more remote. The Northern fleet from New Bedford this year, numbers one hundred and two vessels, of which seventy-two are in the Arctic, twenty in the Ochotch, and ten in the Kodiak ground. Nineteen of the fleet will probably return to San Francisco in the fall to recruit, and eighty-three to Honolulu, from which latter point, should the average catch be taken, there will be shipped between 50,000 and 60,000 barrels of oil.

Reading for the Young.

LITTLE MAUDE.

BY ADA J. MOORE.

LITTLE Maude, among the clover,
In a little cottage dwelt;
Mother had she none to love her,
Yet an angel bent above her,
When at evening prayer she knelt.

And a consciousness of blessing
Softly through the twilight fell,
Sweeter than the fond caressing,
When a mother's hand is pressing
Ringlets that she loves so well.

Through the darkness and the dawning,
While the little dreamer slept,
Through the brightness of the morning,
Like a calm her soul adorning,
Little Maude this treasure kept.

And its sweetness lingered o'er her
All the long and weary day:
Pleasant visions thronged before her;
And the hate that others bore her,
Vanished, in its light away.

Thus she grew so meek and holy,
That her life was like a dream!
Vision like, it faded slowly,
Ere it vanished from us wholly,
Like the twilight's fading gleam.

[*Little Corporal.*

A GOOD STORY OF A PRINCELY BOY.

CHARLES X of France, when a child, was one day playing in an apartment of the palace while a peasant from Auvergne was busily employed in scrubbing the floor. The latter, encouraged by the gayety and playfulness of the count, entered familliarly into conversation with him, and, to amuse him, told him a number of diverting stories and anecdotes of his province. The prince, with all the ingenuousness of childhood, expressed his commiseration for the narrator's evident poverty, and for the labor which he was obliged to undergo in order to obtain a scanty livelihood.

"Ah!" said the man, "my poor wife and five children often go supperless to bed."

"Well, then," replied the prince, with tears in his eyes, "you must let me manage for you. My governor every month gives me pocket money, for which, after all, I have no occasion, since I want for nothing. You shall take this money and give it to your wife and children; but be sure not to mention a word of the matter to a living soul, or you will be finely scolded."

On leaving the apartment, the honest dependent acquainted the governor of the young prince with the conversation that had taken place. The latter, after praising the servant highly for his scrupulous integrity, desired him to accept the money, and to keep the affair a profound secret, adding that he should have no cause to repent of his discretion. At the end of the month, the young Count d'Artois received his allowance as usual, and watching the moment when he was unobserved, hastily slipped the whole sum into the hands of his *protege*.

On the same evening a child's lottery was proposed, for the amusement of the young princes, by the governor, who had purposely distributed among the prizes such objects as were most likely to tempt a boy of the count's age. Each of his brothers eagerly hazarded his little store, but the Count d'Artois kept aloof from his favorite amusement. The governor, feigning astonishment, at last demanded the reason of his unusual prudence; still no answer from the count. One of the princes, his brother, next testified his surprise, and at length pressed the young count so hard that in a moment of childish impatience he exclaimed:—"This may be very well for you; but what would you do if, like me, you had a wife and five children to support?"—*Selected.*

"THAT'S HOW!"

AFTER a great snow-storm, a little fellow began to shovel a path through a large snow-bank before his grandmother's door. He had nothing but a small shovel to work with.

"How do you expect to get through that drift?" asked a man passing along.

"By keeping *at it*," said the boy cheerfully; "that's how!"

That is the secret of mastering almost every difficulty under the sun. If a hard task is before you, stick to it. Do not keep thinking how large or hard it is; but go at it, and little by little it will grow smaller and smaller, until it is done.

If a hard lesson is to be learned, do not spend a moment in fretting; do not lose a breath in saying, "I can't," or "I do not see how;" but go at it, and *keep at it*. *Study*. That is the only way to conquer it.

WHAT YOU ARE TO DO.

THE Testament teaches us to
Add to your "faith,"
Add to your "virtue,"
Add to your "knowledge,"
Add to your "patience,"
Add to your "godliness,"
Add to your "brotherly kindness,"
Add to your "charity."

What does this all mean, children—this adding of one thing to another? It means that either one is not sufficient of itself to make a perfect Christian, but that you must strive to grow in grace—to add one good thing to another until you possess them all. Just look at this table and see what precious things you are admonished to acquire. Will you try to make these virtues yours, children?

THERE is more gladness in childhood than our young friends realize.

Publisher's Notices.

Send Early!—In order that we may get the names of subscribers in type for mailing machine as fast and early as possible, our freinds are requested to send their lists—or portions of them—as soon as convenient. Those who are forming large clubs can send what they have, and complete their lists afterwards. Many agents keep to work for six months, remitting from time to time; and some after sending for one club form another and get a second or larger premium.

Premium List, Show-Bill, &c.—Our Premiums to Club Agents are more liberal than ever before, but we have not space to give a list of them in the RURAL. Premium Lists, Show-Bills, Specimens, &c., are promptly sent, free, to all applicants. Give us your address, and also that of any friends who may be disposed to form clubs, that you and they may see our offers of "Good Pay for Doing Good."

Our Club Rate.—The lowest Club Rate of the RURAL is $2.50, and if any agents offer it for less they must pay us that price. *Our* rates are invariable, and none are authorized to depart from them—though of course we cannot prevent agents from doing so, or even giving away the paper; that is their business.

Local Club Agents.—We want a live, wide-awake agent for the RURAL in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

How to Remit.—The safest way to remit for the RURAL is by Draft or Post-Office Money Order,—and either of these, if made payable to his order, may be sent at the risk of the Publisher.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., DECEMBER 14, 1867.

NEWS OF THE WEEK.

From Washington.

THE last Session of the 39th Congress ended on Monday the 2d inst., at noon, and the First Session of the Fortieth Congress began immediately thereafter. The President's message was transmitted on the 3d. Reports of the Secretary of the Treasury, the Postmaster-General, the Comptroller of the Currency, and the Secretary of the Navy were also promptly received.

A bill has been passed, after long debate, abolishing the tax on cotton to be grown after the present year.

The Committee on Ways and Means has been instructed to inquire into the expediency of exempting from taxation all articles the product of hard labor. A bill repealing the authority of the Secretary of the Treasury to make any reduction in the currency by retiring or cancelling United States notes has been reported from the same Committee, and has, after much debate, passed the House; and another has been introduced to fund the interest bearing debt of the United States and to provide for a national tax thereon, &c.

Gen. Grant is preparing a new order to still further reduce the expenditures on account of the army.

Applicants are warmly struggling for the mission to Mexico. Gen. Kilpatrick, Minister to Chili, wants to come nearer home, it is said, and there are half a dozen other applicants.

The impeachment question has absorbed much attention. Mr. Boutwell, Chairman of the committee which made the three reports on the subject, began a long argument in favor of the impeachment resolution, on the 5th instant, and concluded it on the ensuing day.

The vote on the resolution, though staved off for a little time by fillibustering, was taken finally by ayes and noes on the 7th inst., and resulted yeas, 57; nays, 108.

The Navy Department has information from the U. S. Consul-General at Havana, of the loss of the U. S. war steamers De Soto and Monongahela, in the recent storm off Santa Cruz. The Susquehanna was also badly damaged.

THE PRESIDENT'S MESSAGE.—This important document is very lengthy, and we can give only the briefest summary. It declares that there is no Union as our fathers understood the term; that the States lately in rebellion are deprived of their constitutional rights; and that a complete restoration can be effected only by a faithful adherence to the Constitution and Laws. It opposes the Military Reconstruction Bill as unconstitutional and oppressive, and urges its repeal; also opposes negro suffrage, and thinks that the colored people cannot be trusted to govern themselves. The advantages of Southern trade are discussed at length; reference is made to frauds committed on the Treasury, and the infringement by Congress of the Presidential right to remove persons from office; and considers the finances and resumption of specie payment. A thorough revision of the revenue system, a reduction of the number of articles subject to tax, and a general retrenchment of expenses are recommended; and Indian affairs, the Pacific Railroad, Postal affairs, our Foreign relations, claims against England, and the position of the West India Islands are all discussed at some length.

INTERNAL REVENUE.—The report of the Commissioner of Internal Revenue, shows that the receipts from internal revenue for the last fiscal year were $265,920,474.65—an amount considerably larger than was anticipated. The act of July 13, 1866, was intended to reduce the revenue $65,000,000 a year, and the act of March last was meant to accomplish a further reduction of $50,000,000 a year. The receipts for 1865 were $211,129,529.17, and for 1866, $310,906,984.17. The enterprise and growth of the country have thus left the receipts only $55,000,000 a year less than the maximum.

THE NAVY.—It appears from Mr. Welles' report that during the year the naval force of the United States has been reduced forty vessels and four hundred and eighty-two guns. There are now 56 vessels in the squadron service, mounting 507 guns, and divided as follows:—Asiatic Squadron, Rear-Admiral Bell, 12 vessels, 96 guns; North Atlantic Squadron, Rear-Admiral Palmer, 10 vessels, 79 guns; North Pacific Squadron, Rear-Admiral Thatcher, 11 vessels, 85 guns; South Atlantic Squadron, Rear-Admiral Davis, 7 vessels, 65 guns; and the European Squadron, Admiral Farragut, 7 vessels, 83 guns. The whole number of vessels in use, on all kinds of service, is 103; and there are 49 iron-clads laid up, and six not completed; 21 steam vessels not completed, and two incomplete sailing vessels; while 57 other vessels are laid up, repairing, fitting for sea or for sale—making total number of vessels, 238, carrying 1,360 guns. Eleven thousand nine hundred men have been employed in the naval and coast survey service during the year. The Naval Academy graduated the present year a class of eighty-seven. The estimates for appropriations for the fiscal year commencing June 30, 1869, amount to $47,317,-183.95.

THE TREASURY.—Secretary McCulloch's report is long and elaborate. It treats of specie payment, of sustaining national banks, need of conservative legislation, taxation, the indispensability of large revenues, the tariff, observance of contracts, exemption of government bonds from taxation, &c. The Secretary thinks that, with favorable crops next year, and no legislation meantime unfavorable to contraction, specie payment ought not to be delayed longer than July 1st, 1869. He considers as important if not indispensable to such a condition of national prosperity as will insure a permanent restoration of specie standard:—First—The funding or paying of the balance of the interest-bearing notes and the continued contraction of the paper currency. Second—The maintenance of the public faith in regard to the funded debt. Third—Restoration of the Southern States to their proper relations to the Federal Government. The receipts and expenditures for the next fiscal year ending June 30, 1868, are estimated at $381,000,000. The expenditures for the same period are estimated at $372,000,000.

New York State Items.

THE municipal election in New York city on the 3d inst., resulted in the election of John T. Hoffman for Mayor by an immense majority.

The Board of State Canvassers convened in Albany on the 3d inst., and canvassed the vote for State officers. The official footings show 698,128 votes for Secretary of State, of which Homer A. Nelson received 373,029.

Horace Greeley unconditionally declines the appointment of Minister to Austria.

The Constitutionnl Convention after much debate has adopted a section on taxation which provides that taxation on real and personal property shall be equal and uniform in the State, and which makes it the duty of the Legislature to pass laws giving effect to such provision. A sworn statement, delivered to the taxing officers by persons and corporations owning or holding such property, specifying estimated value thereof, &c., is to be the basis of taxation.

Ex-Comptroller Denniston died at Salisbury on the 3d inst.

The schooner Baltic was sunk in Oswego harbor on the 6th inst.

From the South.

THE returns from South Carolina indicate a Radical triumph. The delegates elected, as far as heard from, are fifty whites, thirty browns, and thirty-one blacks.

The Virginia Reconstuction Convention met in Richmond on the 3d inst. Judge Underwood was made President.

On the 5th inst., the Alabama Reconstruction Convention adopted an ordinance providing for the submission of the Constitution to the registered voters on the 4th of February, 1868. The article on franchise has been amended so that all persons are disfranchised who are disqualified from holding office by the proposed amendment to the Constitution, known as the 14th article.

The final vote on the adoption of the Constitution was taken on the evening of the same day and resulted—yeas, 67; nays, 10. Seventeen members protest against it.

General Hancock has lately issued an order, revoking paragraph 2 of special order No. 135, which provides for the immediate revision of jury lists, to exclude all citizens not registered voters under the Reconstruction acts. The total majority of registered voters for the convention in South Carolina will number nearly 9,000. The vote of the State was upwards of 70,000.

Pacific Railroad Progress.

THE Great Pacific Railroad project assumes the phase of a grand fact. Already has a locomotive climbed the eastern slope of the Rocky Mountains, and transit from the Atlantic to the Pacific ocean is now accomplished in fifteen days. Two powerful Companies are putting forth all their energies in the construction of the great through line. The Union Pacific Company have built 500 miles of road in two years; the Central Pacific Company, beginning at the Pacific side and working eastward, have performed a more prodigious work, even, in carrying their track across California and over the Sierra Nevada range into the Salt Lake Basin. The distance accomplished by the latter—only 150 miles—would not seem to indicate this, but the amount of resistance overcome in it has been tremendous. Seven thousand feet above sea-level the track mounts, yet by practicable grades. Backed by Government credit to a large extent, and even now financially a success, the Central Pacific Road is a sure investment. The Central Pacific Company offer the First Mortgage Bonds of their road for sale on highly advantageous terms, as will be seen by reference to their advertisement in another column.

MESSRS. S. D. & H. W. SMITH of this city, the well-known manufacturers of the AMERICAN ORGANS, have recently added to their styles very powerful and attractive Organs for churches, with beautiful upright cases, having gilded imitation pipes, making them fine ornamental instruments for the choir gallery or chapel. All musicians, upon hearing them, express their surprise at the amount of pure and full tone which they are capable of producing. These new styles contain the deep manual sub-bass, and super-octave coupler, giving them sufficient volume to sustain even a hundred or more voices, and yet are rich in soft and expressive effects. They are becoming very popular on account of their real musical merit, and also for their reasonableness in price, bringing them within the reach of all churches.—*Christian Register.*

A PORTRAIT OF HORACE GREELEY.—The Publishers of the New York Tribune are sending a first rate steel-engraved portrait of Mr. Greeley to subscribers to the Tribune. See advertisement for particulars.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Dec. 10, 1867.

GOLD sold yesterday at 136¾. Speculators have done what they could to manipulate the market for a rise, but without much success. Two things are in the way; foreign exchange is abundant and low, so there is no demand for gold for shipment; and the gold payments of January will amount to nearly $36,000,000. The *bears*, in view of these facts, have the advantage, and the people do not regret it.

There is very little change to notice in the money market, either at the east or west. The Boston market is perhaps a little easier; rates of interest continue firm and high in New York, particularly for commercial people. Continual failures have created suspicion, and paper not known to be gilt-edged is not in favor. As we have heretofore intimated there must be a good many mercantile failures about this time, and it is hoped they will drop out without creating any unusual alarm or panic. The failures in the interior so far as we learn, are not more numerous than usual at this season of the year.

The extreme cold weather of the last few days has suspended canal navigation. It is possible a sudden change of weather may clear the canal of ice, but at the present writing the indications are not favorable. The low state of the water for some weeks seriously impeded navigation, and in consequence there are many loaded boats unable to reach tide water. The property in the boats detained is variously estimated at from $10,000,000 to $20,000,000 in value. Probably the latter figure is too high, but the amount is very large, and some of the property, like apples and potatoes, must be greatly damaged by the frost. The detention will cause serious loss to many parties. A large quantity of coal shipped to Rochester is now ice-bound.

WHEAT.—Prices have advanced a little during the week. Red wheat sold in this city yesterday at $2,50@$2,55. The eastern market has been variable, but on the whole shows an advance.

SHEEP PELTS.—A very large number of pelts have been brought to this market recently. The best are selling at about $1,35.

WOOL.—The New York market is firmer. The Boston sales last week were larger than the week previous, footing up 800,000 pounds. Prices ranged from 35 to 55 cents for fleece.

DRESSED HOGS.—The market last week ranged from 8 to 8½ cents. Some large hogs sold at a trifle higher to outsiders, but the market was not above the outside figure.

Rochester Wholesale Prices Current.

On receipt of 25 cents, a Sealed Ticket will be drawn, without choice, and delivered at our office, or sent by mail to any address. The prize named upon it will be delivered to the ticket-holder on payment of ONE DOLLAR. Prizes will be immediately sent to any address, as requested, by express or return mail.

☞ You will know what your Prize is before you pay for it. Any Prize may be exchanged for another of the same value. ☞ No BLANKS!

☞ Our patrons can depend on fair dealing.

REFERENCES—The following persons have lately drawn valuable prizes from this Company, and kindly permitted the use of their names:—J H Milloor, 368 Sixth Avenue, N Y, $1,000; Mrs E Collins, 75 Nelson Place, N Y, $500; Miss C Cook, Chicago, Ills, Piano, value $450; W Boyd, New Haven, Gold Watch, $250; Rob't Furman, Dubuque, Sewing Machine, $100; Henry McCallum, Louisville, Ky, $500; Col T I Ransom, Washington, D C, Musical Box, $150; L H Knapp, 36 Fourteenth-st, N Y, Piano, $500; G H Benedict, New Orleans, Gold Watch, $200; W A Barnes, Atlanta, Ga, $500; R H Sutton, Nashville, Melodeon, $150; Edward Dayton, Mobile, Ala, Diamond Cluster Ring, $350; S Payne, Burlington, Vt, $100; L D Ferris, Springfield, Ills, Diamond Pin, $300; Mrs B Wedgewood, Trenton, N J, $100; Thos Barrett, Jr, 16 Gay-st, Baltimore, Sewing Machine, $75; H B Ahrens, 31 Main-st, Buffalo, $100; W N Palmer, New Bedford, Mass, Gold Watch, $275; Miss C Rowe, Ninth and Sansom-sts, Phila, Gold Watch, $150; J T Pratt, Hicks-st, Brooklyn, $500; M Cauldwell, Bagg's Hotel, Utica, $1,000; S Cammeyer, Detroit, Mich, Gold Watch, $350; Mrs D Crissey, Hartford, Conn, Silver Set, $150; A Schultz, Louisville, Ky, Diamond Ring, $250; George Nason, 96 Warren-st, N Y, $500; Mrs T Morris, Fourth-av, corner Fifteenth-st, N Y, Piano, $100. We publish no names without permission.

Opinions of the Press.

"Musical Festivals" several times postponed, compelling purchasers of tickets to wait months for the distribution, has impaired public confidence in such affairs. The only fair system of distribution is the old and popular one of SEALED TICKETS, stating the prize, which will be delivered immediately, on payment of one dollar. That is the plan of H. BARTON & Co., at 599 Broadway, the most attractive place of the kind now in operation. They are doing the largest business, and deserve their success. You cannot draw a $100,000 farm, there, but have a reasonable *chance* for a good prize, as we know many that have been drawn, and the firm is reliable.—*Morning Advertiser, Oct. 25th, 1867.*

The New York Gift Company are distributing many valuable prizes. We have examined their manner of doing business and know them to be a FAIR DEALING firm. Their plan is more satisfactory than "Presentation Festivals," as they DRAW every day and the subscriber need not pay for the prize drawn, unless suited.—*Gazette, Oct. 24th, 1867.*

☞ Liberal inducements to Agents. Satisfaction guaranteed.

Every Package of Sealed Envelopes Contains One Cash Gift.

☞ Six Tickets for One Dollar. 13 for $2; 33 for $5. All letters should be addressed to

H. BARTON & CO.,
599 Broadway, New York.

FARM FOR SALE—80 ACRES—Situated 2½ miles north-east from Newark, Wayne Co., N. Y.; well watered; bearing orchard of 3 acres; young orchard 5 acres; woodland, 6 acres; buildings good; on good road. Terms easy; best of land. Price, $100 per acre. Enquire of J. E. BRIGGS, Esq., Newark, N. Y., or of U. S. OSBAND, on the premises. Dec. 4th, 1867.

℞ WHEN YOU FEEL A Cough or bronchial affection creeping on the lungs, take AYER'S CHERRY PECTORAL, and cure it before it becomes incurable.

AGENTS WANTED.—The Complete HERBALIST: Or, THE PEOPLE THEIR OWN PHYSICIANS BY THE USE OF HERBAL REMEDIES, is the title of one of the best family medical books that has ever been offered to the public. The rapid sale of this book, and the large commission allowed, enables a good agent to make easily from $30 to $30 per day. Address for full particulars the author and publisher, DR. O. PHELPS BROWN, No. 19 Grand Street, Jersey City, N J.

OUR SCHOOLDAY VISITOR IS ONE of the very best, cheapest and handsomest Boys' and Girls' Magazines in the world! Beautifully illustrated and a cover printed in color every month. Volume XII commences January 1868. Form Clubs now for new Volume. PREMIUMS FOR EVERYBODY.—$1,25 a Year. $1.00 to Clubs. Specimen numbers and full instructions to Agents, 10 cents. Agents wanted at every Post-Office and School District in the United States. Address J. W. DAUGHADAY & CO., 934-2t 424 Walnut Street, Philadelphia, Pa.

DEVONS.—FOR SALE, THE 7-YEAR old Devon Cow "Helena 2d," sired by imported "Omer Pasha," (453,) a prize winner in England; dam the well known cow "Helena 11th" (387.) "Helena 2d" won the first prize at the late State Fairs of Michigan and New York, and at many other shows. Also three yearling Bulls, all first class animals and prize winners, and descended from prize animals and will take their name and number in the next volume of Devon Herd Book. WALTER COLE, 931-3t Batavia, Genesee Co., N. Y.

CHEESE VATS FOR FACTORIES. MAPLE'S PATENT EQUALIZING DISTRIBUTORS

With COOPER'S NEW CAST IRON STEAM CHEST, make this the most perfect Vat operated by steam ever introduced. Agents wanted to sell these Vats in Western New York. These Patents for use in Ohio and Western States are for sale. Also, Roe's Patent Self-Heating Vat with Cooper's improvements. Also a new patent Screw for presses—the best in use. ☞ Send for Circulars. 934 3t H. & E. F. COOPER, Watertown, N. Y.

BELLEVILLE UNION ACADEMY.—R. L. THATCHER, A. M., Principal, Is one of the oldest and best Institutions in the State. Located in Belleville, Jefferson Co., N. Y., a healthy, moral, quiet village five miles from Adams, on the Rome and Watertown R.R. Three daily stages. If youth cannot be safe from temptation here they can be safe nowhere. A full corps of careful and experienced instructors. Board three dollars per week. Tuition less than in most Academies. Full Commercial Course. Winter Term opens Dec. 9th. References, our Patrons. For Circulars apply to the Principal. A. DICKINSON, F. EDWARDS, Sec'y. [934-3t] Pres't.

525 MILES OF THE UNION PACIFIC RAILROAD, Running West from Omaha ACROSS THE CONTINENT, ARE NOW COMPLETED.

This brings the line to the eastern base of the Rocky Mountains, and it is expected that the track will be laid thirty miles further, to Evans Pass, the highest point on the road, by January. The maximum grade from the foot of the mountains to the summit is but eighty feet to the mile, while that of many eastern roads is over one hundred. Work in the rock-cuttings on the western slope will continue through the winter, and there is now no reason to doubt that the entire grand line to the Pacific will be open for business in 1870.

The means provided for the construction of this Great National Work are ample. The United States grants its Six Per Cent. Bonds at the rate of from $16,000 to $48,000 per mile, for which it takes a second lien as security, and receives payment to a large if not to the full extent of its claim in services. These Bonds are issued as each 20 mile section is finished, and after it has been examined by United States Commissioners and prononnced to be in all respects a first-class road, thoroughly supplied with depots, repair-shops, stations, and all the necessary rolling stock and other equipments.

The United States also makes a donation of 12,800 acres of land to the mile, which will be a source of large revenue to the Company. Much of this land in the Platte Valley is among the most fertile in the world, and other large portions are covered with heavy pine forests and abound in coal of the best quality.

The Company is also authorized to issue its own First Mortgage Bonds to an amount equal to the issue of the Government and no more. Hon. E. D. Morgan and Hon. Oakes Ames are Trustees for the Bondholders, and deliver the Bonds to the Company only as the work progresses, so that they always represent an actual and productive value.

The authorized capital of the Company is One Hundred Million Dollars, of which over five millions have been paid in upon the work already done.

EARNINGS OF THE COMPANY.

At present, the profits of the Company are derived only from its local traffic, but this is already much more than sufficient to pay the interest on all the Bonds the Company can issue, if not another mile were built. It is not doubted that when the road is completed the through traffic of the only line connecting the Atlantic and Pacific States will be large beyond precedent, and, as there will be no competition, it can always be done at profitable rates.

It will be noticed that the Union Pacific Railroad is, in fact, a GOVERNMENT WORK, built under the supervision of Government officers, and to a large extent with Government money, and that its bonds are issued under Government direction. It is believed that no similar security is so carefully guarded, and certainly no other is based upon a larger or more valuable property. As the Company's

FIRST MORTGAGE BONDS

are offered for the present at 90 CENTS ON THE DOLLAR, they are the cheapest security in the market, being more than 15 per cent. lower than U. S. Stocks. They pay

SIX PER CENT. in GOLD,

or over NINE PER CENT. upon the investment. Subscriptions will be received in Rochester by the FIRST NATIONAL BANK, and in New York at the Company's Office, No. 20 Nassau street, and by

CONTINENTAL NATIONAL BANK, No. 7 Nassau St.,
CLARK, DODGE & CO., BANKERS, 51 Wall St.,
JOHN J. CISCO & SON, BANKERS, No. 33 Wall St.,

and by the Company's advertised Agents throughout the United States. Remittances should be made in drafts or other funds par in New York, and the bonds will be sent free of charge by return express.

A NEW PAMPHLET AND MAP, showing the Progress of the Work, Resources for Construction, and Value of Bonds, may be obtained at the Company's Offices or of its advertised Agents, or will be sent free on application. 931-4t

The News Condenser.

— There are 50,000 Asiatics in California.

— The Maine shipyards are nearly all idle.

— The Mayor of St. Martinsville, La., is a negro.

— Calais, Me., has raised $3,000 for a soldiers' monument.

— It snowed on Monday week from Boston to Buffalo.

— A hog weighing 1,000 pounds is on exhibition in Columbia county.

— Goodrich and Swift are to skate for the championship of America.

— Mr. Dean of Cornwall, Vt., lately sold a yearling Merino ram for $1,000.

— The American Squadron in European waters is to winter in the Tagus.

— In France the subscriptions for the Pope have reached 2,000,000 francs.

— Ice thick enough to bear skaters was formed at Baltimore a few days ago.

— Two persons were indicted for Mormonism in Delaware county last week.

— Stevens, once the Fenian head-center, is in Paris, faded, forlorn and forgotten.

— In Florida 900 white votes were cast in the State out of over 11,000 registered.

— Unemployed laborers are leaving Quebec, searching in New England for work.

— For Dickens' first course of readings in New York the tickets brought $16,800.

— The entire cranberry crop of the country amounts to 300,000 bushels worth $1,200,000.

— Gen. Shields, ex-U. S. Senator from Illinois, is now a quiet farmer in Carroll Co., Mo.

— Of 78 persons arrested at Syracuse in the month of Nov., 13 were temperate and 65 intemperate.

— Mr. John Layton of Lyons recently gathered 120 bushels of carrots from 16 square rods of ground.

— The Trades' Assembly of Chicago are to give a course of free lectures to workingmen this season.

— Oberlin college has gained a suit which confirms its title to nearly 10,000 acres of land in Doddridge county, Va.

— Mark Twain writing from Cæsarea Philippi, calls it Baldwinsville, because it sounds better, and is easier remembered.

— A father and his two daughters conduct a steam sawmill in Indiana. One daughter is engineer and the other helps at the lumber.

— Government has sold to a menagerie nine of the famous camels imported for beasts of burden several years since and sent to the southwest.

Special Notices.

WE ARE GLAD TO LEARN THAT

MR. WILLIS, with his irresistible *Stump Machine*, is again getting under way after the losses by the late destructive fire, having already turned out two machines, the destinations of which are more than five hundred miles apart; and he hopes now to be able to fill all his orders. We conversed with a person yesterday who received his machine less than two months ago, who has already cleared twenty-six acres of very inveterate stumps. Persons wanting Machines will find the winter a favorable time to order them to have them in readiness for early spring work. They may be used in winter when the ground is not frozen more than five or six inches. He has reduced his price to $350.00 with the means to clear an acre without moving the machine. This machine pulls stumps and turns them out ready for handling. A pamphlet with cuts and description sent on application. Address, (enclosing red stamp,)

W. W. WILLIS, ROCHESTER, N. Y.

THE
NEW YORK WEEKLY,

(THE GREATEST STORY AND SKETCH PAPER IN THE UNITED STATES.)

NOW IS THE TIME TO SUBSCRIBE!

A New Story is Commenced in No. 6 of the New York Weekly, Now Ready, by the great American Author,

EMERSON BENNETT,

ENTITLED

SOL SLOCUM;

OR,

THE MAID OF THE JUNIATA!

The NEW YORK WEEKLY now has a circulation of

125,000 COPIES!

SOL SLOCUM;

OR,

THE MAID OF THE JUNIATA!

From the pen of America's gifted romancer,

EMERSON BENNETT,

commenced in the

NEW YORK WEEKLY,

No. 6—NOW READY!

SOL SLOCUM;

OR,

The Maid of the Juniata,

BY

EMERSON BENNETT,

is the greatest product of his transcendantly great pen. It is a tale of the great border, and the characters which figure in it are as various as the many scenes through which they have to pass. One after another are introduced the hardy pioneer, the cunning trapper, the wily savage, the eccentric seeker after adventure, the tender maiden, severed by the force of circumstances from friends and kindred, the heroic and daring youth whose aspirations are lofty, whose soul is fearless, and whose deeds are daring, together with a miscellaneous crowd of adventurous spirits presenting almost every phase of human character, each of whom plays his or her part in the thrilling drama. The story is replete with scenes and incidents which cause the blood of the reader to leap with electric force, and constantly alternating between joy and sorrow, tears and laughter, indignation and admiration, he suffers and rejoices with the characters, absolutely seeming to act with them, so intensely is he interested—so deeply is he spell-bound. The story never flags from the beginning to the end, and the love portions of it are especially beautiful, and such as to enlist the sympathy of every lady reader. This great story is commenced in No. 6 of the present volume, and those who desire to read it should send in their orders. Once more we say, buy the

NEW YORK WEEKLY,

and read

SOL SLOCUM,

BY

EMERSON BENNETT.

Among the romance writers of the NEW YORK WEEKLY may be mentioned

MRS. MARY J. HOLMES, MRS LEON LEWIS, MARY KYLE DALLAS, MRS. CATHARINE A. WARFIELD, MARGARET BLOUNT, MRS. ANN S. STEPHENS, ALMEIDA M. BROWN, HELEN FOREST GRAVES, HELEN CORWIN FISHER, EDMUND KIRKE, LEON LEWIS, WM. HENRY PECK, ALFRED B. STREET, EDWARD S. ELLIS, EMERSON BENNETT, P. HAMILTON MYERS, EDWARD MINTURN, JAMES REYNOLDS, FRANCIS S. SMITH, and many others, to say nothing of those great stars in the Literary firmament, A. J. H. DUGANNE, WILLIAM ROSS WALLACE, EMMA ALICE BROWN, M. EDESSA WYNNE, MRS. SARAH A. WATSON, and a host of others, and that trio of brilliant humorists, Q. K. PHILANDER DOESTICKS, JOSH BILLINGS, and MARK TWAIN, and many others. Besides a host of BRILLIANT ESSAYISTS, SPICY PARAGRAPHISTS, PAINSTAKING COLLATERS, and about one hundred other occasional contributors.

SPECIMEN COPIES SENT FREE.

OUR TERMS.

THE NEW YORK WEEKLY is sold by every News Agent in the United States. The price is SIX CENTS, but in cases where Agents have to pay extra freight, a higher price is charged. When there is a News Agent in the town, we desire our friends to get the NEW YORK WEEKLY through him. When sent by mail, single copies, $3 per annum; four copies, $10, which is $2,50 a copy; eight copies, $20. The party who sends us $20 for a club of eight copies, (all sent at one time,) will be entitled to a copy *free*. Postmasters and others who get up clubs, in their respective towns, can afterward add single copies at $2,50.

The NEW YORK WEEKLY and the ILLUSTRATED LITERARY ALBUM will both be sent for $5 per annum.

☞ **NOT A PATENT MEDICINE.** ☜

TURNER'S TIC DOULOUREUX, OR Universal Neuralgia PILL.

A SAFE, CERTAIN, AND Speedy Cure FOR NEURALGIA, AND ALL NERVOUS DISEASES.

Its Effects are Magical.

It is an *unfailing remedy* in all cases of Neuralgia Facialis, often effecting a perfect cure in less than twenty-four hours, from the use of no more than *two or three pills*.

No other form of Neuralgia or Nervous Disease has failed to yield to this *wonderful remedial agent*.

Even in the severest cases of Chronic Neuralgia and general nervous derangements,—of many years standing,—affecting the entire system, its use for a few days, or a few weeks at the utmost, always affords the most astonishing relief, and very rarely fails to produce a complete and permanent cure.

It contains no drugs or other materials in the slightest degree injurious, even to the most delicate system, and can *always* be used with *perfect safety*.

It has long been in constant use by many of our *most eminent physicians*, who give it their unanimous and unqualified approval.

Sent by mail on receipt of price, and postage.

One package,.....	$1.00..	Postage 6 cents.	
Six "	5.00..	"	27 "
Twelve "	9.00..	"	48 "

It is sold by all wholesale and retail dealers in drugs and medicines throughout the United States, and by

TURNER & CO., Sole Proprietors,
926-26t 120 Tremont St., Boston, Mass.

PLASTIC SLATE ROOFING

JOINT STOCK COMPANY,

OFFICE 157 [Room 19] *BROADWAY*,
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR

ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and unde caying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

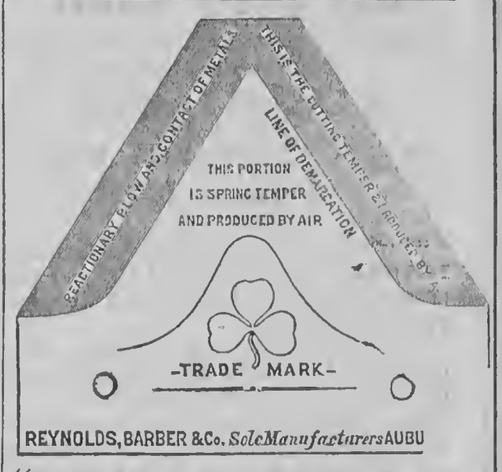
929-4t J. W. MOUNT, Medina Iron Works, Medina, Orleans Co., N. Y.



"THE REYNOLDS" MOWER AND REAPER KNIVES, manufactured exclusively by us, under *Reynolds' Patents for tempering steel "without the aid of any liquid,"* received the only award at the great "*National Implement Trial*," held at Auburn in 1866. They *possess*

The Following Superior Qualities.

1st. They are made with a fine cutlery temper at the edges.

2d. They hold only a *spring temper* in the center, and at the heel.

3d. They are warranted *perfectly uniform*, every knife being exactly alike in temper.

4th. We warrant they *can be ground from eight to ten times without losing their cutting edge.*

5th. Finally, *we will warrant them to cut from 40 to 50 acres of grain or grass without once being ground.*

We are the sole manufacturers of these Knives in the United States and Canadas. Each Knife hereafter will bear our Clover Leaf Trade Mark, as shown in above cut.

Read what the National Committee says of our sections:

"Desirous of investigating reaper and mower sections as thoroughly as possible, we collected the sections of different makers to as great an extent as we were able, and subjected them to a series of careful experiments. We found no fractures in any of the sections manufactured by the Messrs. Reynolds of Auburn, but we detected them in about 10 per cent. of those made by other manufacturers. We caused nearly 1 16th of an inch to be successively ground off from the edge of each of the samples, examining carefully the temper of the edge after each grinding. The sections of Mr. Reynolds retained their temper perfectly for ten successive grindings. None of the others showed as good a temper after the third grinding; some of them were so poor that after the third grinding the edge could be cut off with an ordinary pocket knife.

"Having thus ascertained the superiority of these sections, we were desirous of seeing the processes of their manufacture, and on making known our wishes, the Messrs. Reynolds were kind enough to show us the whole of their works, and we confess to a feeling of great surprise on seeing their sections so perfectly tempered without the aches of any liquid, by percussion, reaction and cold air alone. We saw over a thousand tempered and ground, not one of which was cracked, or which exhibited any traces of fissure whatever. We believe this process will greatly enhance the efficiency of our reaping and mowing machines, and we rejoice that American ingenuity has perfected so valuable an invention. The process, though unpatented at the time of the trial, has since been covered by letters patent.

THE SNOW BIRDS' SONG.

BY MARIE S. LADD.

THE little snow birds flit around
My casement, singing low their song,
That chilling winds, and sleety snow
Will visit us the winter long;

That ice will span the river's breadth,
And hide the water's limpid gleam,
And pebbly shore, and pearly shell,
Will only seem a summer's dream;

That trees will bend their brown heads down,
Oppress with weight of clinging snow,
And white and chill the way will be
Where'er the winds of winter blow;

That frost will trace the window-pane
With cold devices, quaint and fair,
Unstable, and as fragile as
Our gilded castles built in air;

That years may come with leaden tread,
And armed with winters yet to be;
Of colder ice, and deeper snow,
The little snow birds sing to me.

But turning from their idle prate
My heart takes up the sweet refrain
That snow birds leave for other climes,
And summer will return again!

The log lights up the winter hearth
With many a gleam of summer ray,
And we will soon forget the song
The little snow birds sing to-day.

The Story Teller.

Written for Moore's Rural New-Yorker.

A LESSON LEARNED.

A STORY OF THE WAR.

BY JAMES L. BOWEN.

"I'M sorry it does not please you, RICHARD; I did the best I could. You used to be very fond of hash, prepared in this way, and I thought you would like it now."

"I never liked it," was answered, a little quickly. "I always ate it, and suppose I shall have to now. I don't see anything else."

And a wandering, vacant look passed over the table. Not that a plentiful supply of wholesome and well-cooked food was wanting, but something unpleasant had evidently crossed RICHARD NASH'S mind, and must needs find vent in words of unmerited reproof to the pale, gentle woman whom he called "wife" to the world.

"There is some more of that cold meat," she remarked, rising. There were tears which wished to force themselves to her eyes, but she kept them back now, that they might flow unrestrained when none should observe them.

RICHARD NASH eyed the meat with a suspicious glance, but ventured to eat a very hearty meal, in which he partook of every dish upon the table, though he would fain have shown that none of them were half as good as should have been.

"I'm going to send up some mackerel," he said, stopping with his hand upon the latch, and speaking in a very peculiar manner. "Nothing can be better for dinner, and they have some very fine ones at the grocery. Now see how well you can fix one up for dinner."

NANCY NASH watched her husband as he disappeared from sight, and then dropped into a chair, to let the withholden tears have freedom. Not that her husband was a cruel man, or her's a peculiarly unhappy lot. But RICHARD had one failing which clothed his house in gloom, and seriously befogged the happiness they might otherwise have enjoyed. Not an epicure of the first water could have been more fastidious in regard to his food. During her girlhood and more advanced years, NANCY had been unusually careful to perfect herself in culinary as all other household matters, and when she married RICHARD, and was placed in a cosy little house as sole mistress, she fancied all her fond dreams of wedded bliss were to be realized. A few months served to dispel the sweet fancy that all was to be golden in hue. When the novelty of this new life had somewhat worn off, the selfish traits of RICHARD'S character began to crop out, as is almost invariably the case.

At first NANCY was shocked and grieved beyond measure to find that her adored was but a mortal, after all; and more especially when she realized that it was utterly impossible for her to quite please a nature so utterly selfish in some respects as her husband possessed. But the young wife gathered fortitude at length, and now, when scarcely a meal passed that she was not wounded afresh, she was learning to "suffer and be strong." Upon the present occasion she allowed the tears to flow but a few minutes, then choked them down, and tried to forget that any unpleasant scene had transpired at the breakfast table. How well she succeeded we could not say, for her's, though strong when the stern necessity came, was an intensely sensitive nature.

Dinner came, and the same thing was repeated. NANCY had endeavored to prepare the food so that even the taste of her husband should find nothing objectionable. Vain effort. RICHARD was decidedly out of humor, and did nothing but snarl and find fault while eating. However, he made a hearty meal, and then hastened away, leaving behind him a clouded home, and bearing the shadow of that cloud, all unconsciously in his own heart. Not that RICHARD NASH intended to be a fault-finding husband, or do anything which should really give pain to his tender young wife. But he had acquired the habit, like many another man, of finding fault whenever it was possible to do so. Instead of seeking to ease the burdens of life, which lie heavily enough upon every human heart, and fill the air he breathed with happiness and love, he allowed self to rise above all other considerations. In this manner he was rapidly treading the path to household tyranny, and laying the foundations of a joyless, soulless life.

But a change was to take place. His foolish selfishness was to be rebuked in a manner he had little expected. Our country struggling against treason called for men everywhere to join the glorious cause of liberty. An impending draft urged on his moderate stock of patriotism, and RICHARD NASH enrolled his name as a volunteer in the cause of his country. The day appointed for him to join the rendezvous came, and early in the morning he found himself upon the cars, being borne rapidly away, it might be never to return.

It was considerably past noon when they reached the camp, and but for the generous lunch provided by his wife, the recruit would have been ravenously hungry. Still his spirits were good, and novelty made everything interesting. During the afternoon they were supplied with uniforms, required to send away their citizen suits, and otherwise initiated. Near dusk RICHARD found himself allotted to a certain large tent, with about twenty others, all new recruits, like himself.

"Fall in for cups and saucers!" was the order, soon afterward, and in a short space of time NASH was possessed of a cup and plate of tin, and a knife, fork and spoon, all of the most serviceable material.

"What do we have for supper?" he asked, as they formed a line toward the company cook's tent, at the call of "rations."

"Bread and tea," answered an old campaigner, who had been initiated three days before, and consequently felt a proper degree of pity for the unlearned recruits.

"Nothing else?"

"That's all."

"Well, that will answer," thought the questioner; but it must be confessed he regarded the allowance received with anything but a satisfied expression of countenance. Seated in the tent he placed the cup of tea to his lips, took a single swallow, and dashed the remainder upon the ground.

"I won't drink such stuff as that," he exclaimed, with disgust written upon his features.

No sooner had he tasted the bread than that, too, was cast down with an exclamation of contempt.

"Such stuff for men to eat!" he exclaimed. "Thank fortune, I've enough left that I brought from home for my supper."

Yes, he had still a quantity of well prepared food left from the store provided by NANCY'S hands as he was about leaving home, and of this he made a well relished meal.

"I wonder what NANCY has for supper," he mused to himself. "Wish I was there to get a cup of her tea; such stuff as this is'nt fit for any body to drink."

Still there was no particular point to the wish, only a momentary pang crossed his mind, as he recollected the warm cup of tea, well loaded and arranged board, and genial smile which ever met him after a day's toil was ended.

And the first night of his soldier life passed. To be sure, sleeping upon a board, with one thickness of blanket beneath him, was not quite what he had been used to, and seemed more and more painful at each successive hour. But daylight came, and RICHARD was early astir.

"Bread and coffee, with some cold meat, for breakfast," exclaimed a tent-mate, entering as the morning meal was announced.

"Ah, that will do very well," remarked our hero, as, armed with cup and plate, he sallied forth.

Coffee and cold corned beef were among his favorites, and now that he was to make the best of the life before him, he felt sure it would be a comparatively easy task, could he have such a breakfast as now awaited him. True, as he walked back to the tent again, he realized that neither the coffee nor meat smelled as when prepared by his wife. But that was of no consequence; he must expect imperfections.

Seated in the tent, he placed a portion of the meat in his mouth. It was instantly removed! Whether it had long existed in the form of meat is uncertain; but quite evident did it appear to RICHARD that its best days were far past. Not even the prospect of possible hunger before noon could induce him to make a second attack. The bread was somewhat better than upon the former occasion, and after eating a few mouthfuls he took a draught of coffee. Waugh! It was a villainous compound, little resembling the pure and palatable decoctions prepared by his wife. Still he managed to drink a portion of it, and the numerous matters requiring his attention during the forenoon drove away thoughts of appetite which occasionally intruded.

Dinner came. Bread and soup. Now there must be something eatable, for nothing could be simpler than soups in general. He knew that his wife made them in a multitude of different dresses, so that it must be a very easy matter. But surely his wife never made anything like this! The original flavor, which might have been passable, had been so disguised by the generous scorching it had received that he could not distinguish it. Beside it was inordinately salt, and the small quantity he managed to eat kept him drinking of the worse than indifferent well water with which the encampment was supplied.

Day after day passed, and the bill of fare was not varied very much, neither was it essentially improved in quality. RICHARD had determined to be a true soldier, and one of the first duties which lay before him was to adapt himself to soldiers' fare. And although it required the full play of all his philosophy and mental energy, he gradually succeeded in mastering appetite, and ate whatever he could obtain as mechanically as any machine would have performed a piece of work.

A year had passed, and RICHARD NASH, with thousands of others, was upon a long, weary march, half starved for the want of rations, and utterly unable to obtain them, as a supply train intended for them had been successfully "gobbled up" by the rebels. He would not have been fastidious then, could food have been placed before him. Ah no, for starving men are never grumblers. At length the column halted for an hour, and while others were idly bemoaning their hunger, NASH drew from his haversack that which seemed a treasure. It was merely a small piece of army bread, water soaked and muddy, which he had picked up in the road from beneath the feet of his companions. Not an inviting morsel, surely, yet it was precious to that hungry man. He ate it almost ravenously, and then threw himself upon the grass, endeavoring vainly to sleep.

In a few minutes the joyous cry went along the column that the mail had not been captured by the enemy, but had arrived in safety. And soon afterward a letter was placed in the hands of RICHARD NASH from home. One sentence in that letter he read and re-read, as though nothing else had any interest for him. And this was what he read:

"I am tired to-night, yet happy. ELLEN is to be married in two days, and I have assisted in the preparatory baking to-day. Such rows of cake, and stacks of pies! It would do you good to see them. And mother praises them, which takes off half the fatigue I should otherwise feel. How we all wish you could be here to help us devour them."

"If she knew what I ate last, she wouldn't write about wedding cake," he laughed, at length, in thought to himself. "But she needn't hint so strongly about her mother's praise. I'd praise her, too, if I were there. I declare, I feel myself worse than a dog when I think how well she used to do, and I continually finding fault. But never mind. I'll make it all up if ever I live to get home."

RICHARD lived to get home, and the lesson he had learned was not forgotten. NANCY found that her efforts were appreciated, the cloud was gone, and to-day she is among the happiest of wives.

TWENTY-FIFTH THOUSAND.
THE TEMPLE CHOIR, a new collection of Tunes, Anthems, Glees, Elementary Exercises and Social Songs, for the Choir, Singing School and Social Circle, by THEODORE F. SEWARD, assisted by Dr. LOWELL MASON and WILLIAM B. BRADBURY, first published only a few weeks since, has already reached its twenty-fifth thousand, and proves THE MOST POPULAR WORK OF ITS CLASS PUBLISHED IN THIS COUNTRY FOR MANY YEARS. It is the first book in which Dr. Mason and Mr. Bradbury have been associated as editors, and beside their own recent compositions and arrangements, probably represents a greater number of other popular composers than any other work. It is a thoroughly pleasing and useful book, which every one likes. Price $1,50 each; $13,50 per dozen. A single copy (only) to any teacher of music or leader of choir, post-paid, for examination, for one dollar. Published by
MASON BROTHERS, 596 Broadway, New York.
MASON & HAMLIN, 154 Tremont St, Boston.

SECURE PROFITABLE INVESTMENT.
THE
Central Pacific Railroad,
First Mortgage Thirty Year, Six per Cent. Coupon Bonds,
PRINCIPAL AND INTEREST PAYABLE IN GOLD COIN,
Represent the preferred claim upon one of the MOST IMPORTANT LINES OF COMMUNICATION IN THE WORLD, as it is the sole link between the Pacific Coast and the Great Interior Basin, over which the immense Overland travel must pass, and the
Main Trunk Line Across the Continent.
The Road is now nearly completed from Sacramento to the Richest Mining Regions in the Salt Lake Basin, and is being rapidly carried forward by the largest force of laborers ever employed by any Railroad Company on this continent.
The natural, legitimate, commercial business of the Road surpasses all previous expectation, and is profitable beyond parallel, even among the oldest roads in existence. The Earnings and Expenses for the Quarter ending Oct. 31, were as follows, IN GOLD:

GROSS EARNINGS,	OPERATING EXPENSES,	NET EARNINGS,
$593,847.92	$102,088.61	$491,759.31

This result, however, would have been far greater but for the inability of wagon teams to forward the freight and passengers from the temporary terminus in the mountains.
The United States Government and the State and Cities of California have so aided and fostered the Great Enterprise, that the Company will assume very light annual Interest obligations, and will have the following ample Resources at command for the Construction:

DONATIONS in Lands, Bonds, Concessions, etc., (without lien)	$12,800,000
CAPITAL STOCK, Net Earnings, etc., (no lien)	11,000,000
LOANS (subordinate lien)	3,000,000
U. S. SUBSIDY BONDS, 726 miles (subordinate lien)	25,317,000
FIRST MORTGAGE BONDS	25,317,000
Resources, first 726 miles	$77,834,000

The FIRST MORTGAGE BONDS are in sums of $1,000 each, with semi-annual gold coupons attached, and are offered for sale, for the present, at 95 per cent. and accrued interest from July 1st, in currency, at which rate they yield nearly
Nine per Cent. upon the Investment.
These Bonds, authorized by the Pacific Railroad Acts of Congress, are issued only as the work progresses, and to the same extent only as the Bonds granted by the Government, and are the prior lien upon the whole valuable property furnished by the above Resources. They possess special assurances and advantages over other Corporate Securities, and are destined to rank among THE BEST INVESTMENTS IN THE WORLD, from their unusual attractions of safety, soundness and profit.
Conversions of Government Securities
INTO
CENTRAL PACIFIC FIRST MORTGAGE BONDS
now realize for the holders from TWELVE TO EIGHTEEN PER CENT. ADVANTAGE, with the same rate of interest.
Bonds can be obtained through the subscribers directly, or through responsible Banking agencies.

AND FINANCIAL AGENTS OF THE C. P. R. R. CO., NO. 5 NASSAU ST., N. Y.
And of FARMERS' & MECHANICS' NATIONAL BANK and FIRST NATIONAL BANK, Rochester, N. Y.

A PORTRAIT OF MR. GREELEY.
The Publishers of the New York Tribune having received many inquiries from time to time for a good likeness of the editor, have made an arrangement with Messrs. Derby & Miller to furnish copies of Ritchie's engraving, from a photograph by Brady, which will be sent to such subscribers to THE TRIBUNE as wish it on the conditions below. This is much the best likeness of Mr. Greeley that has been engraved. The print sells for $1. Each subscriber who sends us $10 for the Daily, $4 for the Semi-Weekly, or $2 for the Weekly Tribune, the paper to be sent by mail, and who requests the engraving, *at the time of subscribing*, will have a copy carefully mailed, post-paid, to his address. One will likewise be sent to any person who forwards a club of ten or more Semi-Weeklies or twenty or more Weeklies, at our club rates, and asks for the portrait at the time of remitting. We do not propose this as a premium, but to gratify the many friends of The Tribune, who desire to possess a good likeness of its founder. See advertisement elsewhere in this paper for club terms. 934-1mo

CHILDREN.—ALL PARENTS SHOULD understand that children's shoes, with metal tips, will wear at least three times as long as those without. The new Silver Tip is decidedly ornamental, and is being extensively used on children's first-class shoes. Sold everywhere. 934-4t

NEW YORK TRIBUNE.
The Largest and Cheapest.
Now is the time to Subscribe for
THE GREAT FAMILY NEWSPAPER.
THE
New-York Weekly Tribune
is printed on a large double-medium sheet, making eight pages of six broad columns each. It contains all the important Editorials published in THE DAILY TRIBUNE, except those of merely local interest; also, Literary and Scientific Intelligence; Reviews of the most interesting and important New Books; the Letters from our large corps of correspondents; the latest news received by Telegraph from Washington and all other parts of the country; a Summary of all important intelligence in this city and elsewhere; a Synopsis of the proceedings of Congress and State Legislature when in session; the Foreign News received by every steamer; Exclusive Reports of the proceedings of the Farmers' Club of the American Institute; Talks about Fruit, and other Horticultural and Agricultural information essential to country residents; Stock, Financial, Cattle, Dry Goods and General Market Reports; making it, both for variety and completeness, altogether the most valuable, interesting and instructive WEEKLY NEWSPAPER published in the world.
The Full Reports of the American Institute Farmers' Club, and the various Agricultural Reports, in each number, are richly worth a year's subscription.
TERMS:

Mail subscribers, single copy, 1 year—52 numbers	$2 00
Each $2,00 subscriber will receive a portrait of Mr. Greeley, *if he asks for it at the time of subscribing.*	
Mail subscribers, Clubs of five	9 00
Ten copies, or over, addressed to names of subscribers, each	1 70
Twenty copies, addressed to names of subscribers,	34 00
Ten copies to one address	16 00
Twenty copies to one address	30 00

An extra copy will be sent for each club of ten.
A steel engraved portrait of Mr. Greeley will be sent to each person who sends a club of 20, *and asks for it at the time of subscribing.*
Terms, cash in advance.
Drafts on New York, or Post-Office orders, payable to the order of THE TRIBUNE, being safer, are preferable to any other mode of remittance. Address,
934-1mo THE TRIBUNE, New York.

1867. THE ECLECTIC MAGAZINE, 1868.
So long and favorably known to the thoughtful public, offer to their new Subscribers the following
Splendid New Premiums.
Every new Subscriber for 1868, paying $5 in advance, will receive either of the following beautiful chromo oil paintings:
BASKET OF PEACHES, Size, 9 x 11, price $2,50.
PIPER AND NUT CRACKERS, " 6½ x 8, " "
The above are exact copies of oil paintings.
For Two Subscribers and $10 we will send the beautiful chromo,
POULTRY LIFE. Size, 5½ x 8, price $5.
For Three Subscribers and $15, a copy of Rosa Bonheur's celebrated piece,
SHETLAND PONIES. Size, 8½ x 12½, price $6.
For Five Subscribers and $25, the beautiful chromo, after W. M. Brown, of
STRAWBERRIES. Size, 12 x 15, price $7,50.
TERMS OF THE ECLECTIC.—Single copies, 45 cents; one copy one year, $5; two copies one year, $9; five copies one year, $20. Address W. H. BIDWELL,
934-1m 5 Beekman St., New York.

BATTLE BOOK.
Agents find our Morocco-bound, one volume, 700 *page, royal octavo, profusely Illustrated, Battle History* sells best. County rights given. Price $3. Sample mailed on receipt of price. Best large Steel Portrait of Grant, Sherman or Farragut, given with each copy.
AMERICAN AGRICULTURIST says:—"We have already spoken favorably of the reliable character of the house of H. H. LLOYD & Co. This is NOT J. T. Lloyd. *Notice that the initials are H. H.*"
H. H. LLOYD & CO., 21 John St., New York.

WILBOR'S COD LIVER OIL AND LIME.—The friends of persons who have been restored from confirmed Consumption by the use of this original preparation, and the grateful parties themselves, have by recommending it and acknowledging its wonderful efficacy, given to the article a vast popularity in New England. The Cod Liver Oil is in this combination robbed of its unpleasant taste, and is rendered doubly effective in being coupled with the Lime, which is itself a restorative principle, supplying nature with just the agent and assistance required to heal and reform the diseased lungs.
A. B. WILBOR, No 166 Court Street, Boston, is the proprietor. Sold in New York by DEMAS BARNES & CO., F. C. WELLS & CO., and by Druggists generally.

FOR COUGHS, COLDS AND CONSUMPTION, try the old and well known VEGETABLE PULMONARY BALSAM, approved and used by our oldest and best physicians and families for forty years past. Get the genuine. REED, CUTLER & CO., Druggists, Boston, Proprietors. 934-4t

THE WEED SEWING MACHINE CO.
OF HARTFORD, CONN.,
Beg leave to ask the readers of the "Rural" to examine their Machines, and compare the case of running, rapidity, quietness, and superior stitch, with any others produced. AGENCIES are being established in all the leading business towns. 934-4t

BAKER'S CHOCOLATE AND COCOA
PARIS EXPOSITION, 1867.

Leaf, Flower and Fruit of the Cocoa with a pod opened.
W. BAKER & CO'S
American, French, Homœopathic
and
VANILLA CHOCOLATE
PREPARED COCOA,
BROMA,
Cocoa Paste, Homœopathic Cocoa, Cocoa Shells, Cracked Cocoa, etc.
THESE Manufactures, to which FIRST PREMIUMS have been awarded by the CHIEF INSTITUTES and FAIRS of the Union, and at the PARIS EXPOSITION OF 1867, are an excellent diet for children, invalids and persons in health, allay rather than induce the nervous excitement attendant upon the use of tea or coffee, and are recommended by the most eminent physicians.
For sale by the principal Grocers in the United States.
WALTER BAKER & CO.,
Dorchester, - - - Mass.

AGENTS WANTED.—JUST ISSUED—LEE AND HIS LIEUTENANTS, comprising a life of Gen. Lee and every Southern General of distinction. Also "THE LOST CAUSE," an official Southern History of the War,—patronized by tens of thousands eager to hear "the other side." E. B. TREAT & CO., Publishers, 654 Broadway, New York. 932-6teo

MOORE'S RURAL NEW-YORKER.

AGRICULTURE · HORTICULTURE · RURAL LIFE · EXCELSIOR · LITERATURE · SCIENCE · ARTS · NEWS

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other Journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

VARIETY IN FARMING.

THE tendency of farming in this country has been towards specialties. Before the war of the rebellion the South grew cotton; it bought its food, its clothing, its luxuries,—individuals grew rich, and the people and soil grew poor. The Prairie States raised corn, which was sold for ten cents per bushel, burned for fuel, and monetary panics became chronic in the West. New England and the Middle States practiced variety in farming, and the water wheel and steam engine worked everywhere in sight of the plow and the reaper; with them flourished a stable prosperity, and they stood best of all the terrible drain of resources. Looking the world over, in the Past or Present, we find those communities and nations which found their agriculture on the fewest varieties of products, likewise the least prosperous, powerful and stable.

The practice of devoting a farm mainly to the growth of a single product, is opposed to all principles of scientific or common sense Agriculture. The one product system of necessity abstracts from the soil more than it can legitimately return; it demands continuously the same mechanical and chemical conditions of the soil, like elements of plant food, and the point may be reached where the single variety will fail altogether, yet leave the earth capable of producing other crops abundantly. Thus it would seem as if Nature herself declared against this system by refusing to support it any great length of time in one locality. The one crop farmer is also less independent than if practicing mixed husbandry, inasmuch as he is obliged to depend to a large extent on the market to supply his family and the demands of his business. Neither can he conduct his labor with the same economy that he could if growing a variety of crops. At certain seasons he has little to do, and at others he is overwhelmed with work. His risks also are greater, approximating to those of commercial transactions, without having the compensatory chances of equally large profits. Variety of crops also makes variety of work, which relieves the tediousness of the business. In short, a mixed husbandry is the only scientific, common sense, self-sustaining, and, therefore, permanent system of Agriculture; it renders the farmer, the community and the nation independent, and its fitness is recognized, in the light of recent changes, both in the cornfields of the West and on the cotton lands of the South.

HEDGES.—THE BARBERRY.

So much has been said and writtten on the subject of hedges, that it has almost reached exhaustion, and yet the coming necessity for some process to protect our fields, is as pressing as ever. The scarcity of timber for rails, owing to our wasteful destruction of forests and the high price of sawed lumber, which will never be sensibly abated, cannot fail to enlist a just and proper feeling, at any rate for the benefit of posterity. The boundless West will feel the inevitable need of some device to mark the bonndaries of their premises and fields; for the countless acres of prairie land almost devoid of any timber, it seems there is no so available source of supply for positive wants, as the hedge. It is cheap, of easy construction, growing while we are asleep, durable and irresistible to animal encroachment, and neither rots nor is affected by winds.

THE BARBERRY—ANTHER AND STEMS.

But the first and great consideration is what is the best and safest material. There have been objections urged against every shrub that has yet been experimented upon. English Hawthorn, of universal use in that country, does not succeed here; one great reason of its failure is the *Scale Louse* of the apple tree. The Osage Orange is not perfectly hardy in all locations. The Buckthorn is liable to the attacks of the cotton aphis, and a prevailing trouble with all these plants is the attacks of the *field mouse*, which burrows in the leaves and mulch under the hedge, and when heavy snows fall barks the plants to utter extinction, as it often does nnrsery trees and large saplings. The evergreens—spruce, cedar, pine and hemlock—do not send out sprouts or suckers from their bodies or roots, and therefore never thicken up any closer than they are set out. The question, what can be found as a substitute that will meet all contingencies, is yet a difficult and unsolved problem.

The *Barberry*, which has been suggested by some one, meets many of the objections urged against all these varieties. It is of easy production, growing from seeds freely, perfectly hardy in any climate, is armed with very sharp protective thorns, suckers freely and does not grow over eight or ten feet high, and is perfectly proof against mice; its bark being of a medicinal and nauseous taste forbids its destruction by that little pest. Its blossoms are long yellow racemes, are handsome, and it bears a scarlet, edible berry as tart as the cranberry. The structure of the anther is peculiar; it is formed with two valves which, when opened, allow the pollen to fall in the shape of fine dust. The engravings represent the anther; stems with leaves, and buds, and thorns. It would be a praiseworthy act, if even a few persons would test these suggestions, and may be render as great a benefit to the farming community as he that introdnces the reaper or mower or potato digger. L. B. L.

AMONG THE STUMPS.—No. I.

SECOND SERIES.

HIGH FARMING AND LOW WAGES.

AGAIN I am spending a few weeks in Southwestern New York, on a new farm which I am clearing up for (I beg pardon of my friend, Dr. RANDALL) *dairy* purposes. Hereabouts a man must keep *cows* if he wishes to pass for sensible, and, like old JOHN RANDOLPH, go out of his way to kick a sheep; *that I* will not do. Cheese factories are prevalent. I will tell you about them another time.

The country about me is mainly cleared up, and, thanks to the Erie Railroad, the dairy business, and the energy of the people, presents an appearance of thrift and good management, with exceptions. Well, I snppose there is such a thing as being too nice in farming. The style of farming must correspond with situation and circumstances. One thing you may depend upon, *high farming* will never exist where labor is *dear* and land *cheap*. If land that costs *nothing* will yield some feed, and you can get what you need without cultivation, you will bestow very little labor to the acre—witness Western plains. You will expend labor just about in proportion to the value of the land and the cheapness of labor. Americans, with their indomitable energy, their spirit of rivalry, their high aspirations, their varied and admirable soil and climate, under the shelter of free institutions, will excel every nation on the globe in the quality of their farming, just as soon as land gets well up and labor gets well down! *That is what we are coming to.* The world of men, like the world of waters, tends to a dead level. If wages are higher here than elsewhere, laborers will flow here till an equilibrium is established and the price of work is the same the world over. Every right thinking person will deprecate a reduction in the price of work. Labor is none too high, compared with the price of what the laborer has to buy. A large family—and, thank GOD, some people still have large families—must consume all a farm laborer can earn, and trust Providence some besides. In a new country there is more work than workers; populous districts reverse that order, and workers underbid each other, till a man's earnings will barely keep the life in his body, and supply his family with enough of the necessaries of life to create an impression that they die of disease, and not from improper, insufficient food and unwholesome apartments.

Such a state of things is to be deprecated mainly from its occasioning the *demoralization* of the higher classes, who get up a philosophy, a religion and a government to justify, sanctify and protect their crimes,—parents and progenitors of most other crimes. The "original sin" of the governing class is the robbing of the mass of the people of their birthright in the soil. *God's title deeds extend equally to all men.* The landless are made dependent upon landlords and capitalists, who are intent on getting the most work for the least pay, ending in pauperism which paralyzes industry, and finally compels large sacrifices of ill-got gains for the support of the poor.

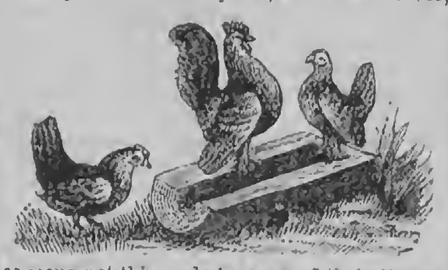
In this country our remedy for this state of things, and we cannot apply it too soon, is the reservation of our public domain for *actual settlers*, limiting the amount according to present and prospective demands. So long as we have good and cheap land, labor cannot be greatly oppressed, for the more efficient, intelligent and successful will become free-holders, and so prevent an overstock of hired laborers. I know very well that many farmers complain of the high price of labor, and I know by my own experience the last year, that a farmer like myself, *whose principal crop is wool*, cannot make anything after paying taxes and present rates of labor, and selling wool for forty cents, unless he is in a country where land is very cheap. I also know equally well that my workmen with families and rent to pay, have lived close and laid up nothing.

Farmers must hit upon products suited to their soil and circumstances, and must make their gains by good calculations, by improved modes of tillage, and by economy in all departments, and not by refusing "to take a paper," or by beating the editor down a dollar on his price and his workmen two dollars on the month.

Writing of *economy*, things are quite different up here among these Allegany stumps from what they were forty years ago, when I was a boy among the stumps of "old Genesee," now Wyoming. A well-to-do farmer, I recollect, then gave in sufficiently to the budding heresies of the times to *borrow* a "broadcloth" coat to get married in, but *homespun* was the rule. Ox teams could go to meeting, and ox carts carry a *lady* to a quilting. Tow breeches were not ignored by good society, things were comparatively substantial, and actually lasted *some*;—it was not all gauze, and shoddy, and brash timber, and brittle iron. *Now*, a young man whose robust constitution can endure anything—but "the draft," must teeter through the world on ellipties or ride in the cars; walking or going on horseback is not to be thought of, and he must have a new harness every other year, with silver buckles and pretty broad; *spend* a good deal when he goes out, and so on, and so on, and *all this is to be charged to the farm.* It helps explain why farming is unprofitable, and *why wages should be lower.*—H. T. B.

THE CREEPER OR DWARF FOWL.

THE following is an illustration of a diminutive pattern of the barn-yard fowl known as the creeper or dwarf. This variety is described by some as not greatly exceeding the tame pigeon in size, and differing from the Bantam mainly in bulk and the shortness of its legs. It is occasionally found in farm-yards, and obtains favor,



as many pet things do because of their diminutiveness and kindly domestic habits. There is another redeeming trait of the creepers—the shortness of their legs—rendering them less able to deface newly made beds in a garden, or to unearth the seed which the planter has committed to the earth,—hence are an aid rather than a detriment to newly prepared grounds.

SELF-CLOSING GATE OR "STILE."

A RECENT number of the (English) Journal of Horticulture gives a single gate, or, as it is

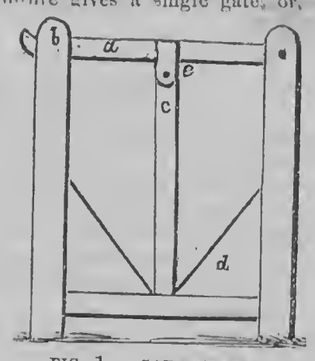


FIG. 1.—GATE CLOSED.

called there, a "Sommersetshire Stile;" though a stile, properly speaking, is a set of steps to pass over a fence or hedge. The construction is quite simple, and there are probably many places in which it would be found more useful than a swinging gate, as it is self-closing and self-fastening. Fig. 1 represents the gate closed, and fig. 2 gives it half open and open; the letters refer to the same parts in both. Two posts are set, united by a cross-piece below; one of the posts, *b*, has at its top a slit to receive the cross-bar, *a*; this bar at one end passes into a mortise

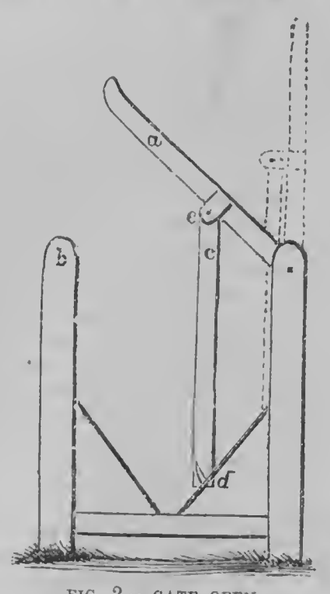

FIG. 2.—GATE OPEN.

in the other post, and is fixed by a pin upon which it moves, and the other end is made long enough to be shaped into a projecting handle. A perpendicular piece, or pendant, *c*, is attached to the cross-bar, *a*, by means of a pivot, at *e*, and at the lower end it has a ring which runs upon the iron rod, *d*. The action of the different parts in opening is shown in fig. 2.

RINDERPEST IN MARYLAND.—A dispatch to the Philadelphia papers states that the cattle disease known as rinderpest is fatally prevalent in Baltimore county and portions of adjacent counties. It is probably the same disease which proved fatal awhile since on Long Island, and was pronounced, after examination, to be pneumonia, and not the European rinderpest.

BREEDING AND HANDLING STOCK.

So much has already been said and written on this subject that it would appear exhausted, still as its success depends upon so few simple principles I am tempted to again bring the matter to the attention of our reading farmers; and although my remarks may more particularly apply to the West, rather than to your more favored locality and the older settled portions of the country, still the RURAL finds its way here and meets with a cordial welcome.

Breed up;—and now I almost hear some crying out, "We can't afford to pay $500 for a bull, $50 or $100 for a ram, $25 for service of a horse," and so on. I will admit it; but in almost every community there can be found some superior animals which can be purchased, or the use of them obtained at a comparatively small cost, and by doing so, ere long, seeing the good results, these same persons will feel able to buy thoroughbreds and pay the prices they are worth,—for men who keep the breeds of animals pure, distinct and improving, must have prices to remunerate them for their extra care, attention and trouble in doing so. To be sure it is attended with some care and trouble, this constantly keeping in your eye the improvement of your stock; but is not sowing and harvesting attended with care and trouble—even more, hard labor? And if it will pay in the one instance, will it not pay far greater in the other; for does a steer that will weigh as much or sell for as much money at two years old as one at three years old cost any more trouble, care or money to raise it? Then, in comparison to the less cost and enhanced value, what does the trifling cost of $2.50 or $5.00 for the service of a *good* bull signify? Nothing. Guarding at all times against the tendency to the great error of breeding natives and grades to thoroughbreds, and embracing the idea that the progeny is as good as the sire—a very common idea and one which can be seen exemplified in almost every community. For instance, an enterprising man brings a thoroughbred bull into the neighborhood; farmers for miles around come to see him, they admire him, discuss his points, &c.; some breed to him, although they are satisfied "the price is too high," "it will never pay," and yet almost every bull calf from him is kept for a bull because he is a "chip from the old block," and used simply because his services can be had for a dollar or two less than the thoroughbred.

Farmers, I say again, *breed up.* If you can get access to thoroughbreds, breed to them; if not, then do the next best thing, *i. e.*, breed to the very best you can find.

Do not depend upon a plum or crab apple thicket for shelter for your stock, neither a grove; for although it may break off the force of the wind a little, yet the rain, sleet and snow will find their way to the skin. If you are not able to build barns, stay at home from "Town" a few times and build straw sheds for your stock, which will cost you only your time and labor,—thus not only making them more comfortable, but saving money, in the shape of grain, for yourself. Besides, your time is more profitably employed than possibly it might have been in town.

Feed and water your stock *regularly* and plentifully, move about them quietly, and handle them with gentleness. Feel that they are dumb brutes and that the "All-seeing Eye" will look upon it as a sin if they suffer. All kinds of stock, but sheep more especially, if attended to regularly and with kindness, will do better on a less amount of feed than if attended to irregularly and with unkindness.

Push the calves, lambs and colts—feed them *strong*, keep them growing. I believe there are men, even in this enlightened age, who profess to think if a colt goes through the first three winters of his life so that he will just about stand up, each succeeding spring, that he will make the hardier horse. I hope if any such should chance to read this article they will try the experiment of feeding one calf or colt generously.

But, dear RURAL, I fear that for a new comer you may deem me lengthy. If so, I will only say in apology that the subject interests me. I was induced to write from the fact that we are now having our first installment of winter, in the shape of a cold rain, after an extraordinary mild and beautiful autumn, and I was conscious that part of my sheep were without shelter, although with the exception of the straw the shed is completed. C. S. P.

Iowa, Nov. 23, 1867.

Communications, Etc.

CATTLE DISEASE IN VIRGINIA.

A CORRESPONDENT, "C. H. W.," Alexandria, Va., writes:—"I wish a recipe or remedy to cure cows that are troubled with something like the 'lung fever.' Cows have been brought here from Pennsylvania and are dying off like sheep. They are taken with a cough, hollow horn, and a drying up of milk as soon as taken. Refuse to eat, and in a few days die. One man has lost twelve, and several other friends have cows sick."

REMARKS.—It is probable that the disease here spoken of is acute pneumonia or, as some phrase it, quick consumption, and is induced by the change of climate and food to which the afflicted animals have been subjected. But be the cause of the disease what it may, there can be little doubt as to its character. Great mortality among cattle has been noticed in several European countries generally succeeding cold, wet winters and springs followed by hot, dry summers. But without these extremes and fluctuations of the weather a change of locality is often fatal to cattle, superinducing the diseases to which reference is here made. In cases of acute pneumonia veterinarians rely upon free blood-letting as of the first importance. On the abatement of the fever, from depletion, physic should succeed. The spirit of nitrous ether and laudanum —one ounce of the former and half an ounce of the latter—may be usefully administered. To these may succeed ginger, gentian and colombo, mixed in a thick gruel with a dash of good ale. Mashes and root food may follow as the animals indicate a return of appetite. If a salt marsh is within convenient distance it will be found beneficial to transfer the cattle to it as soon as practicable.

Those of our readers posted on this subject would confer a favor by letting their light shine through the medium of the RURAL.—ED.

FAILURE OF MEADOWS.

THERE seems to be a general cry coming up from the graziers that our old meadows are failing in yield. Old men point out fields to the young, that used to yield two and three tons, but now only as many hundred pounds per acre. And a newly seeded meadow soon runs down to the old crop of a few hundred pounds.

The cause of this failure lies mainly at the doors of the graziers. Clover at best lasts but a few years, and timothy must be the main dependence for a permanent sod. How many dairymen are exceptions to the rule, bad as it is, of turning stock on meadows fall and spring? In other words, putting the meadows to the double duty of yielding hay and pasture. This continual cropping of the aftermath takes from the ground what should mulch the grass roots and protect them from frost in winter. But this is not the worst feature. Timothy reproduces itself in two ways from the seed and root. When the former is cut short by the scythe, the strength and vigor of the parent root turns to throwing out side tubers, each with its top, (which is the aftermath,) drawing food from air as well as soil. If these are fed down the bulbs are immature, and enter the winter but to die before spring. What live through, are too weak to send up a vigorous seed stalk—especially if the murderous practice of feeding down in spring is continued—the yield of hay is light, and the "farmer" (?) curses the season, and raises the cry that his meadows are running out. And why shouldn't they? Instead of looking for the cause, he tries to find a cure; forgetting that "an ounce of preventive is worth a pound of cure."

RENOVATING OLD MEADOWS.

The RURAL, with other papers, seems to be looking up cures for worn-out meadows. Most of the remedies published are—use the harrow, manure, re-seed, plaster, ashes, salt, &c. I have tried all of these and failed. I once harrowed one half of a meadow, eight years in sod, after giving it a good coat of manure in spring, and got for my trouble about twenty-five pounds of hay per acre. Next I hauled sheep manure on part of a *new* meadow in fall. That paid about 100 lbs. per acre. Plaster paid the best, about ten per cent. of its worth on new seeded. My remedy is, use a *good sod plow*, and use it *well*, fall or spring, and re-seed the first crop with clover and timothy. In this way I have "renovated" about seventy acres. In some places I would practice a rotation of crops before seeding; but on our hill farms, where we are graziers of necessity, we must "rotate" our old meadows into good ones as soon as possible. Don't be afraid to put in a good plow and "rotate" the old sod; harrow *well;* sow your seed last thing and *roll* it in. (Every farmer should have a roller.) I have one field of 12 1-5 acres—average yield of grass in old sod, six loads. Turned sod over and re-seeded, and got twenty-six loads first crop—next, twenty-four, &c. In four years plowed again—seeded, with fifty-five loads manure on the field, and harvested fifty bushels oats per acre last year, and this, cut forty-one loads of hay. Applied six bushels plaster last spring. This is my experience in doctoring old meadows. C. L. H.

Spring Mills, Allegany Co., N. Y.

HOW TO MAKE VINEGAR.

EDS. RURAL:—Wife and I have been housekeepers more than thirty years, and during all those years have never had less than one barrel of strong, whole cider vinegar in our cellar. Often we have had on hand a stock of several barrels. We have sold many hundreds of gallons to our neighbors; and among the purchasers of our vinegar have been farmers who owned orchards and annually made cider. Frequently I read, in the public press, inquiries how to make vinegar. I now propose to give directions how any family may have a continuous supply from year to year of the best cider vinegar. First, about the casks. As many as two are needed—one to contain cider, and one in which to make vinegar. They should be of seasoned oak, free from sap, with heavy iron hoops, and well painted. If ordinary wooden hooped barrels are used they must be overhauled by a cooper once in two years, and four new hoops, at least, put on each barrel whether they *appear* at the time to need new hoops or not. If the cooper says the old hoops are good enough, insist on the new ones being put on. Without this care the hoops, in some peculiar state of the weather, will suddenly snap, the barrels burst, and the cellar will be flooded with vinegar to your great chagrin, not only from the loss of vinegar, but also, because of the incongruous mixtures which sometimes occur at such times. Prepare a suitable stand in the cellar for the barrels on which they may rest "bung up and bilge free." The barrels should have convenient faucets inserted two fingers' breadth from the chime. In one barrel store your cider, in the other make your vinegar; let both bungs always remain open. In your vinegar cask put a quantity, say 9 gallons, of strong cider vinegar, and weekly draw from the cider and add to the vinegar such a quantity of cider as the vinegar will speedily change into its own nature. After the cider becomes hard this quantity may be three gallons per week. As the cider becomes more acid by age and the stock of vinegar increases, even more may be weekly added. But never add faster than the vinegar will bear without nearly retaining its original strength. The vinegar must certainly recover its acidity in one week. If accidentally you add too much cider, then you must wait until the vinegar fully regains its sharpness. You will get along faster with the vinegar kept at full strength. Of course a commencement may be made with less than nine gallons, or with more, the weekly addition being in proportion. Never add anything but whole cider. After you have a good start you may convert cider sirup, boiled six quarts into one, into vinegar quickly by the above process.

I regard cider vinegar, in moderation, as a healthful and very grateful addition to diet, and of great use in medicine internally, and as an embrocation for human and horse flesh. A tablespoonful of strong cider vinegar—a teaspoonful of salt—added to two-thirds of a teacup of boiling water, drank hot as possible, and very much at one swallow, will arrest the violent vomiting of cholera morbus almost instantly, and soothe the sufferer into a peaceful slumber. Sometimes, though rarely, a repetition of the dose is necessary. During the prevalence of the Asiatic cholera, a neighbor of mine thus treated a case of that disease, suddenly on his hands, so that when the physician arrived all violent symptoms were arrested. PETER HATHAWAY.

Milan, Erie Co., Ohio, 1867.

COTTON AND CORN GROWING IN TEXAS.

ED. RURAL NEW-YORKER:—Inclosed find two dollars, for which send me the RURAL; if this does not pay for a year I will make further remittance. I chanced to see a copy some months since, from which I gleaned some ideas worth to me a year's subscription; and now I feel it my duty to subscribe, believing that I will reap further benefits.

Having the key to the success of some twenty Brazos River bottom farms,—i. e., their accounts on my books,—I am prepared to give you the result of this year's operations. Contracts are usually made with the freedmen either to be furnished tools, feed, board, &c., and give the freedmen one-third of the gross products,—or the freedmen to find themselves in provisions and receive one-half. On a place near by of 400 acres in cultivation, thirty hands are employed. Result:—53 bales cotton, 500 pounds each, worth at gin-house, seven cents per pound; 3,150 bushels corn, in shuck, worth 50 cents per bushel. Say value of cotton, in coin, $1,855; value of corn, $1,575—making $3,430 in gold. No other crops are grown upon the place.

The freedmen receive $1,143 33, to be divided among thirty men, several of whom have families. The owner of the land receives $2,286.66, coin. I furnished him in the spring corn grown in Illinois to the value of $2,250, coin; four casks bacon, $600, coin, and having a supply of fat cattle, he has slaughtered one per week during the year. Where is the profit? The freedmen, as a mass, are without a dollar, and are not disposed to contract for the coming year, as they see but little hopes of making any money. Reason—Each and every man has a pony; they ride to the work when they go—but the great misfortune is that in the busiest portion of the year they will go *en masse* twenty miles to attend a funeral or other gathering, and let the weeds take the crop. G. A. W.

Brazos County, Texas, 1867.

ANTIQUITY OF REAPING MACHINES.—At a late meeting of the "British Association," Rev. PATRICK BELL put in a claim to the invention of the reaping machine, which the Germantown Telegraph treated with but little respect. In a recent issue of that paper was a letter from WILLIAM SAUNDERS of Washington, supplying proof from the London Gardeners' Magazine for 1829, in which the machine was described—bearing a close affinity to those now in use. The drawings of this reaper have been seen by the editor of the Telegraph, concerning which he says:—"The machine *does* bear considerable similitude to those of the present day. It is placed on a square frame-work with a long pole in the center running out in the rear of the frame, to which the horses are attached, who, working from behind, *push* instead of draw the machine. The frame is placed on two broad wheels, one on either side, so that the working is even. The knives, which are three or four times as long as those in the modern machines, operate, scissors like, in the same way as our own. It has what is called a 'conductor' to bend the grain, so as to enable the machine to operate more cleanly and easily."

Dairy Department.

HERKIMER CO. CHEESE FACTORIES.

MR. EDITOR:—Since my last I have visited the cheese factory of WILLIAM BUDLONG in West Schuyler, Herkimer county, where the milk of 1,200 cows was manufactured into cheese. The greatest number made per day was 45, but at the time of the visit in October but 16 per day were made. They were 15 inches in diameter and 10 inches thick. There were in store then about 1,000 of these.

Mr. B. gave me some statistical information which may be of interest to your readers. He stated that the average quantity of milk required to make a pound of cheese was 9.21 pounds. Received for making about $5 per cow. Expense for each, $7.30. Of this, $5.00 went to the manufacturer, and the balance, $2.30, for incidentals, such as bandages and the like. The aggregate average net profit was $60.25, and the range to the owners of the cows, $50 to $70. The whole amount received by the factory last year was $54,230.71.

Mr. B. has four vats, HALF'S, and works day and night. Sets the milk at a temperature of 80° and scalds to 98°. The curing temperature ranges from 70° to 75° For the purpose of cooling the milk 10 pounds of ice are put into each vat each night. The cheese at this factory were fine looking—all bright and perfectly smooth and no appearance of mould. A number were tested—all proving to be of excellent quality. They were very highly colored. Samples of these got the first premium at the County Fair and the second at that of the State.

On the whole, the conclusion about cheese factories to which I arrived was this: that where competent, enterprising and honest men manage them, the results will generally prove of a satisfactory character to all parties interested, but where these requisites are wanting losses and dissatisfaction are the resulting consequence.

Canandaigua, N. Y., 1867. H. M. L.

DAIRY ITEMS.

Little Falls Cheese Market.—The Utica Herald had reports of cheese sales at Little Falls up to Dec. 2d. Receipts from dairies were light, and prices ranged from 13c. to 14c. Most of the Herkimer factory has gone forward. The extreme quotations for factory were 13½c. to 15c. The English market is dull for American, as the English made article is much in excess of last year.

Cheese Factories in Canada.—The Ingersoll Chronicle sums up the cheese factory business in South Oxford County. The number of factories and creameries is 64. Capital employed $64,000. In 1864 ten tons of cheese were made, and in 1867 the aggregate was 1,366 tons. The cows supplying the milk for these factories numbered 12,633. In addition to this there are numerous private dairies. Dairying in Canada, as in Central and Western New York, is rapidly superseding other systems of farm husbandry.

Cows—Profits per Head.—The proprietor of one of the largest cheese factories in Loraine Co., Ohio, states that the net profits of cows supplying milk to his establishment, the past season, was between fifty and sixty dollars per head. This is a munificent return—better, probably, than any other farm product can show.

Calving by Degrees.—GEORGE A. PECK, Wayland, Mass., writes the Massachusetts Ploughman that on the 26th of October a cow belonging to him dropped a fine bull calf, and on the 1st of November, five days afterward, repeated the operation by dropping number two of the same sex. Both were large, smart calves which, together with the dam, were lively and in promising condition.

Rural Notes and Items.

ENLARGEMENT AND IMPROVEMENT!

[THE following note from the Editor-in-Chief, now in N. Y. City, explains itself, and will be read with interest by all who desire the continued "Progress and Improvement" of the RURAL NEW-YORKER:]

MY DEAR WILCOX:—Though the snow blockade precludes my return home "on time," it verifies the old adage about an "ill wind," &c.; for, while thus detained, I have completed arrangements for greatly enlarging and improving our long-time pet—ye RURAL. Without particularizing, will say you can safely announce that, extraordinaries excepted, Volume XIX will *far excel either of its predecessors* in all the essentials of a first-class AGRICULTURAL, HORTICULTURAL, LITERARY, BUSINESS and FAMILY NEWSPAPER. Determined to render it superior in Contents, Appearance and Size, have spared neither effort nor expense to exhibit the true spirit of its Motto, "*Excelsior*," and Objects, "*Progress and Improvement*,"—as will be manifested in the issues of the new volume. The enlargement, it is estimated, will be equal to one column per page (of the present size,)—or, equal to *an increase of eight columns*. This will not only enable us to give much more reading matter, but also make room for the favors of advertisers, without crowding editors and contributors out of house and home. [By the way, you have somehow allowed the advertisements to crowd reading departments this week. Remember the limit, please, and that our *first duty* is to subscribers.] The new type, border, column and dash rules, etc.,—indeed the entire "rig" for the enlarged paper—with the new and able contributors soon to be introduced, and other features, new and renewed, will assuredly render the RURAL worthy of *more than* the One Hundred Thousand Subscribers which are expected for the new volume. You can whisper this softly to our host of Agent-Friends all over the country—as well as to the thousands of readers who can, if disposed, materially aid in extending the circulation and usefulness of the RURAL by introducing it to notice and support in their respective localities.

Another thing. If I remain here most of the ensuing year, as advised by physician, shall be able to accomplish much for the RURAL, aside from what I may write or suggest,—for this is the best point to procure illustrations, literary contributions, etc., as artists, writers, &c., abound and abide in Gotham. Hence, while you, Dr. RANDALL, and others who reside on farms or in gardens—with Major B. and Prof. H. in the sanctum, and Deacon W., Judge G. and Major L. at the heads of their respective departments, (what a variety of titles the RURAL's staff comprises!)—"act well your parts," it will be my endeavor to keep the wires in working order at this end of the line. Should the RURAL have a branch office in this city, (which is not improbable,) the fact will ere long be announced.—H. D. T. M.

DEATH OF DR CHESTER DEWEY.—It is with feelings of sadness that we chronicle in the RURAL the death of Dr. CHESTER DEWEY, who departed this life at his residence in this city on the night of the 15th instant, after a brief illness, in the 84th year of his age. The deceased was born in Sheffield, Massachusetts, Oct. 25th, 1784. He graduated at WILLIAMS' College in 1806, studied for the ministry, and commenced the labors of the pulpit in 1809 in Chester village, Massachusetts. Subsequently he was appointed Professor of Mathematics and Natural Philosophy in the College whence he graduated, a position retained by him for seventeen years. In after years he was at the head of an institution at Pittsfield, Mass., and in 1836 removed to this city and took charge of the Rochester Collegiate Institute, or "High School," as it was generally termed. His success in this position was very great, gaining alike the profound regard of parents and pupils. Well do we remember the occasional excursions made by him and a score or two of youngsters to "The Landing," as it was called, the then northern terminus of the old Carthage Railroad. It was here he delighted to give his pupils practical demonstrations in geology and botany, the youngsters going home ladened with spoils, geological and botanical. He remained at the head of the Institute till 1850, when he received an appointment to the Professorship of Chemistry and Natural Philosophy in the University of Rochester, in which he was efficiently engaged till 1860, when the active duties of a long professional life were relinquished for the quietude and repose of the family circle.

The deceased was of a kindly, genial temperament, always urbane and ready to impart from his stores of varied information to all who made a call upon him. For many years a regular contributor to the RURAL NEW-YORKER, he was always welcome and instructive, and we part with him professionally and socially with feelings of profound regret.

WANT OF WATER IN THE LUMBER REGIONS.—We learn from a gentleman resident in the lumber regions of Pennsylvania that the semi-agricultural population, along the Allegany and its affluents, are severe sufferers this season in consequence of the low stage of water. The quantity of lumber prepared for market there is very large. Much of it has been rafted in anticipation of the customary autumnal rains to float it to market. But, as these have failed, it has become necessary to remove much of the lumber from the creeks to prevent it from being swept away and lost amid the crush of ice anticipated when the streams shall again acquire a rafting volume. The expense of this double handling is severely felt by the farmer-lumbermen, and causes many of them great annoyance. The regular lumbermen may fare better, but the spirit and patience of all classes are severely tested. The rates asked for money, to keep along till the lumber moves, make sad inroads upon anticipated profits.

IMPROVING COWS BY SPAYING.—W. H. MACOMBER, Potsdam, N. Y., puts the following question to our readers. It is worthy of attention, and we should like to publish some facts on the subject:—"Can you or any of your correspondents inform me whether the results claimed by M. GUENON in regard to spaying cows are well founded, and if the operation has ever been practiced to any extent in this country? M. GUENON claims an increase of quantity, quality, and a permanent flow of the milk for a number of years. Now it seems to me that if this were true, it would have been universally known and practiced ere this. The advantages claimed by him are so decidedly for the interest of all cow keepers, that I think they would not fail of adopting that method were it true and practical. If any one knows anything practical about it, let us hear from him."

CORN—A GOOD YIELD.—A committee appointed by the Woodbury (Ct.) Agricultural Society recently awarded a premium for the most prolific yield of corn to JOHN N. ATWOOD of Watertown. The soil was gravelly loam; it received forty loads of manure to the acre; was planted in rows four feet apart and one foot in the rows, and thinned to two stalks in a hill. It was hoed three times, and produced 117 bushels to the acre. CHARLES D. MINOR of Woodbury manured at the same rate; rows 3½ feet apart, and four kernels in a hill, and gathered 100 bushels shelled corn to the acre. A third field, planted by MERRITT W. BARNES of Watertown, produced 92 bushels to the acre. These parties received premiums in the order of production named, and the warm commendation of the committee for the success of their cultivation.

DEATH OF ROBERT A. ALEXANDER.—Among the most prominent stock raisers was ROBERT A. ALEXANDER, who died at his residence in Woodford Co., Ky., on the first day of December instant. He was of Scottish descent, and belonged to a titled family and fell heir to a baronetcy and an ample estate in Scotland, to which place he repaired on the death of the possessor of the family honors. Having arranged the affairs of the estate to which he fell heir, he returned to the United States, sinking the hereditary honors which fell to him, and devoted his time, talents and energy to his favorite pursuit of stock raising. In this he was eminently successful, and held rank in this department second to none in the country. His business ability gave him an extended reputation, and his sudden demise will cause sincere regret in various sections of the country.

WHAT AILS THE CHICKENS?—E. P. H., Farmersburg, Iowa, writes:—"My chickens commenced dying in September last. At first the mortality was among the old hens, and it was supposed to be from moulting; but lately the deaths have increased, and old and young are alike dying by scores. The symptoms are alike in all,—first the comb becomes black, the fowl acts stupid, and dies in from four to forty-eight hours. I have fed pulverized alum, meal wet with alum water, and scalded meal mixed with black pepper, but to no good effect. The food has been corn principally. A part of them have been kept in a good hen house, with the free use of the yard; others have been kept about the barn, and some have not been confined at all, roosting upon trees. None are exempt from the contagion. If you can tell what ails the fowls or what will cure them you will greatly oblige."

DEATH OF VICTOR M. WRIGHT.—The Rutland (Vt.) Herald furnishes the particulars of the sudden death of VICTOR M. WRIGHT, a prominent citizen of Weybridge, in that State, which occurred on the 6th of December. The deceased, in company of another gentleman, was driving down "Ellsworth Hill," about four miles from Middlebury, when the team became unmanageable; broke the neck-yoke, detaching the wagon from them, and throwing Mr. WRIGHT violently against a stone wall, killing him instantly. The deceased was among the most prominent citizens of Addison county, and especially noted as a successful agriculturist, but more particularly as a wool grower and sheep breeder, in both of which he was eminent. He was President of the Addison County Agricultural Society and one of the Vice-Presidents of the State Society, by both of which his sudden death will be deeply lamented.

SOAKING CORN FOR HORSES.—The Prairie Farmer, of recent date, contained a communication recommending the soaking of corn in the ear for feeding to horses. The plan of operations is this:—Place two hogsheads in the barn-cellar, or other place secure from frost; fill them with ears of corn, and add water to cover the contents. When well soaked feed out one cask full; fill it again and commence with the other. In this way one cask, after the commencement, will always be ready for feeding. The cobs become so soft as to be eaten as readily as the corn, and supply no inconsiderable nourishment in addition to that furnished by the grain. By feeding in this manner, with a suitable portion of coarse fodder along with the corn, it is asserted that fully one-third of the quantity of the latter is saved, while the animals are in better condition than when fed in the usual way.

THE HEN FEVER UP.—Many of the choice fowls in the New York poultry exhibition, now taking place in that city, are ticketed for sale at pretty tall figures. Several pairs of Houdons call for $250, and one especially fine is marked up for $1,000. Among the small fry, a pert little Bantam, which is ready to pitch into any of the collection, claims to be worth $25. A pair of Creve Coeurs claim to be worth $250, and a black African Bantam crows for $75. But these are not alone in efforts for public favor. The web-footed family claim recognition. Among the flat-bills were several pairs of Aylesbury ducks valued at $100, while Rouens were held at the same figure.

THE PATENT-RIGHT BUSINESS.—The Scientific American and the New York Artisan come laden each week with specifications of patents awarded at the general office in Washington. They are numbered as issued by the department, the last one being 70,383. What an amount of brain work must have been expended from number one up to the highest on the list! Of all this array of patents, how comparatively small is the number which ever reach the point of paying investments? Of the majority, truly may it be said that they were born only to die.

THE FARMER'S ACCOUNTANT.—Several books have been published, designed to guide the farmer in his business by securing a systematic application of his means and labor in laying out and managing his farm. Another has been supplied by C. O. & F. PERKINS of Boston, Mass., which possesses many positive merits of its own. This book can hardly fail of becoming a favorite with farmers who keep a record of their yearly operations.

THE AMERICAN DAIRYMEN' ASSOCIATION will meet at Utica, New York, January 8th and 9th. WM. H. BREWER of the Sheffield Scientific School, Yale College, will deliver the annual address, on the subject of "Cattle Breeding in its Relations to Dairy Farming." Further information may be obtained by addressing G. B. WEEKS, Secretary, Verona, N. Y.

LIME WASH.—A correspondent writes:—"Will some of your readers give a good recipe for lime wash; one which will not rub off; will stand the weather, and will also admit of colors to imitate various kinds of granite. The one I would like is said to be that upon the White House at Washington, and was published in the Boston Cultivator in 1862."

OUR SHEEP DEPARTMENT.—Owing to the recent snow storm and the consequent blockade of the railroad from the residence of Dr. RANDALL, his customary contributions to the Sheep Department of our paper failed to arrive up to time of going to press with the present issue of the RURAL.

OHIO BOARD OF AGRICULTURE.—The annual meeting of the Ohio Board of Agriculture, together with the Presidents of County Agricultural Societies, will take place at Columbus, January 8th, 1868.

HOW WE PAY PREMIUMS.

To show its friends how the RURAL *pays* (as well as offers) Premiums, we give the following letters—only adding that our present inducements are more liberal than those of last winter:

ST. JOSEPH, MICH., March 22, '67.

HON. D. D. T. MOORE, Rochester, N. Y.:

Dear Sir:—I have the honor to acknowledge the receipt of a WHEELER & WILSON SEWING MACHINE (*ne plus ultra*) from your generous hand—which came a few days since, all O. K., and "runs like a top."—Getting up the club I sent you cost me no time nor money. A little talking and showing of the RURAL did the thing—as any one may do if he will TRY—and receive as fine a present as you have been pleased to send me. May success attend you, my dear D. D. T. M., and believe me ever the friend (energetically) of the RURAL. HENRY W. GUSTIN, *Ass't P. M.*

COAL VALLEY, Ill., March 7, 1867.

D. D. T. MOORE:—*Dear Sir:* This morning I received, by U. S. Express, a Ladies' Gold Hunting-Cased Watch, for which I am much obliged. It is a very nice one, and a valuable present. Any young person wishing a watch can easily earn one by getting up a club for the RURAL. If they can't get a club large enough for a Gold Watch there are other valuable presents offered. I remain, Dear Sir,

Respectfully yours, THOMAS CONE.

ZANESVILLE, O., March 19, 1867.

MR. D. D. T. MOORE:—*Dear Sir:* The beautiful Watch sent me by Am. Express, as premium for RURAL CLUB, came safe to hand, and you will please accept my acknowledgment for the same. In circulating so admirable a Family Paper as the RURAL, the consciousness of doing good is of itself a *present reward*, which, coupled with the handsome token of appreciation just received, almost makes me wish that the Club required *getting up* twice a year.

Yours truly, WM. J. TOWNSEND.

UNDER date of March 11, 1867, Mr. J. B. POTTER of Lake Co., O., writes us in this wise:

FRIEND MOORE:—On Friday evening I received in good order the *Photograph Album* you sent me; and I must say I was somewhat disappointed, for it was *a much nicer and better book than I expected*. A dealer in Albums to whom I showed it, pronounced it a good $6 Album. So please accept my most hearty thanks, along with my best bow, and be assured that I shall remember the RURAL *substantially*, on every opportunity. It is a pleasure to work for so good a paper as the RURAL, especially when the labor is appreciated in so agreeable and substantial a manner as you have done. I will close with PAT's expressive salutation of "*Give me yez all.*"

HORTICULTURAL.

TREE TRAINING AS ILLUSTRATED AT THE PARIS EXPOSITION.

WITH the exception of the well known standard forms commonly seen in our own gardens and orchards, nearly all the elaborate methods of training so general in Europe have originated in efforts to give shelter and warmth to such species and varieties of fruits as do not succeed well in open ground culture, owing to a cold or unsuitable climate.

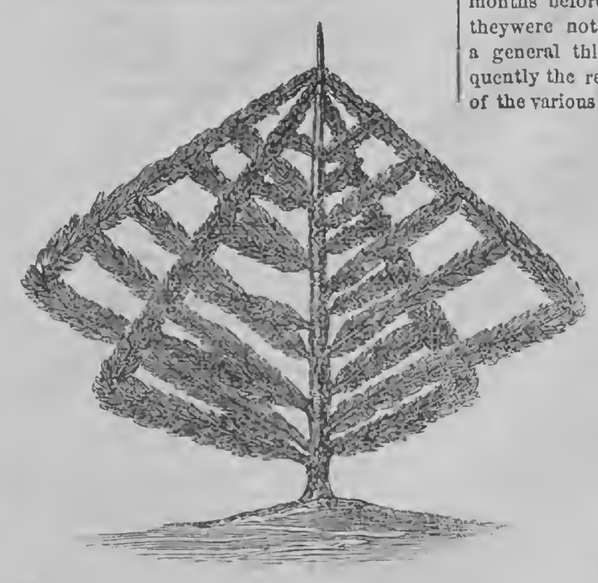

FIG. 1.—STANDARD PEAR TREE WITH FOUR WINGS QUADRANGULAR PYRAMID.

In England, for instance, many kinds of fruits are successfully grown on walls which cannot be grown in perfection otherwise in the open air. So in France, at Montreuil and many other localities, peaches have been profitably grown on walls for market, whilst in the open ground, as we grow them, they could not be grown at all.

How to train trees over the surface of these walls to the best advantage, so as to secure the health and fruitfulness of the trees, and the most economical use of the walls, are the prime objects in view, and the systems or methods of doing this are almost as numerous as the tastes and opinions of cultivators. In our country, where skilled labor is scarce and dear, and people generally impatient, we do not expect to see any of these elaborate methods of training practiced to any great extent. Besides, in most parts of our country there is no real necessity for them; yet there are districts where wall training might be, and doubtless, in time, will be advantageously adopted. Peach culture in Western New York, as well as in many other sections of our country, is not successful in the ordinary orchard way; but by training on walls, which will afford protection from cutting winds, and with warm aspect, success may be obtained. A tight board fence, eight or nine feet high, will answer just as well as a brick or stone wall, and we cannot see why peach culture, for family use at least, may not be greatly extended in this way. The same may be said of the apricot and nectarine. These delicious fruits deserve some special care, and we commend the matter to our zealous fruit growers north of the favored peach regions.

FIG. 2.—STANDARD PEAR IN VASE FORM WITH VERTICAL BRANCHES.

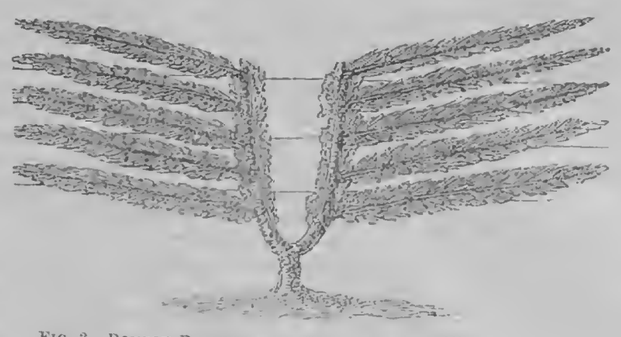

FIG. 3.—DOUBLE PALMETTE WITH OBLIQUE WINGS OR BRANCHES.

Our attention has been called to this subject by an article in the London Illustrated News on trained trees at the Paris Exhibition, by a well known English cultivator, who has published a popular treatise on pruning and training of trees. We copy the accompanying illustrations from that article, for the purpose of presenting the subject to our fruit growing readers, as well as a matter of general interest.

Mr. BARRY, who made a careful personal inspection of this and all other departments of the great horticultural display at Paris, informs us that the plantations of trained trees were quite extensive, occupying plots of ground specially set apart for that purpose, and were highly interesting and instructive.

Almost every conceivable mode of training was represented by the most skillful and distinguished cultivators in France and Belgium. But having all been planted there in the spring, only a few months before he saw them, they were not bearing fruit as a general thing, and consequently the respective merits of the various forms could not so well be determined. His preference, however, is for the simpler forms which are not new.

In the description of the engravings the word "standard" here means a tree which supports itself, and may be of any height or on any kind of stock. The word "palmette" is used to designate trees trained in fan form. They have horizontal, oblique, diagonal or curved branches; and a double *palmette* has two main stems instead of one,—with the arms or branches trained from one side only of each arm or stem. A "cordon" is simply a stem set thickly its whole length with fruit spurs and buds. A double "cordon" has two of these stems from the same root, instead of one. Then cordons are trained vertical, oblique or horizontal, as may be desired or circumstances require.

Mr. BARRY informs us that the most successful training of this kind which he noticed abroad was the horizontal cordon apples, trained along the edges of garden walks. Both in England and France he observed these in numerous instances, and everywhere the success was admirable. It is a simple, beautiful mode of training the dwarf apple, and he has no doubt but that it will find great favor in this country as soon as it becomes known. The diagonal or oblique cordons he expected to see very successful, but was disappointed. From what he saw both in France and England he could not call it a success.

We quote from the article in the Illustrated News:

"There exist, of course, various schools representing phases of Continental culture, which, in noticing the objects exhibited, we can assign and distinguish. The oldest form of these is the Montreuil school, well known, by name at least, in this country. It still flourishes on the Continent (in France and Belgium principally) and shows the best style of modern long pruning. It is accurate in detail, eschews all irregularity, is generally good in developed forms, and has some ancient shapes as yet unsurpassed for low walls. One first prize is given to forms shown by M. Chevalier (Aine,) and a second is allotted to M. Gillechens (of Belgium) for trees trained in this style. In our opinion these last will be preferred, by English visitors at least. M. Chevalier's trees comprise a 30 foot-long "palmette," with horizontal branches, the "coursonnes" of which, "a la Montreuil," are perfect, and recommended to the admirers of long pruning. But even these will join us in agreeing that the intervals between the branches show the inherent defects of this system, being too wide. With closer pruning the crop could easily have been increased by one-third. Another tree, by the same cultivator, is a waved "palmette" with double central leaders. Both are wall-trees. M. Gillechens shows several fine peach trees (also in the Montreuil style,) in which the double central leader is adopted. This plan controls the main sap, aids in constituting the lowest branches, and is one of the very best hints furnished in this section. It is much adopted abroad at present, and recurs frequently here and at Billancourt.

"The trees which illustrate another distinct school of much repute abroad—that of Professor Dubreuil—are the oblique or diagonal cordons, chiefly of pear and apple trees. These are nearly all very closely stopped in their shoots; but an interesting specimen of M. Dubreuil's early style is exhibited by M. Gillechens, consisting of a vertical peach cordon, having the side shoots of 12 inches or 15 inches in length. Though close pruning has superseded this fashion, it might still be well adapted for peach trees on the open wall in some localities. At any rate, it is new to most visitors. There are good diagonal (pear and apple) cordons in this section; and also some, by Professor Gressent, (a leading name,) at Billancourt. These diagonal cordons have been so long recommended by the writer, from his own experience, as very suitable for our climate and wants, that it is hoped a visit to these trees may remove some doubts. In a few years, when better known, they will be universal favorites in England.

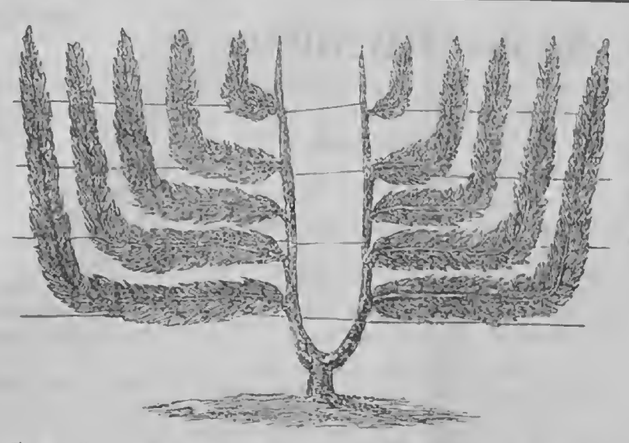

FIG. 4.—DOUBLE PALMETTE LE VERRIER.—THE ARMS FIRST TRAINED HORIZONTALLY AND THEN TURNED UPWARD AND TRAINED VERTICALLY.

"In front of these diagonal cordons, here and at Billancourt, will be seen those low lateral apple cordons, trained on wires, and bearing, on closely-stopped shoots, the second season; which, for edgings of borders, will soon become common everywhere. Other crossed cordons of apples may be seen here worthy of notice. The newest and the most modern school, founded by M. Grin, of Chartres, is, unfortunately, not represented here, save by imitators. Its influence on modern ideas is, however, visible enough in the minute attention paid to the close summer stopping of the shoots in the growing season, which leaves little to be retrenched at the winter regulation. Formerly, the reverse of this was the rule. It is, therefore, to be regretted that no specimen of M. Grin's own work is here shown. His extremely close style—bisecting the stipulary leaves—can best be judged by inspecting the trees themselves. Without committing themselves to this very close method, M. Grin's adherents have obtained excellent results. With modifications rendered necessary by the exigencies of our humid climate, the principles involved in this system are well calculated to succeed, and will eventually (as they have already done in the case of orchard-house trees) supersede the older fashion of long pruning.

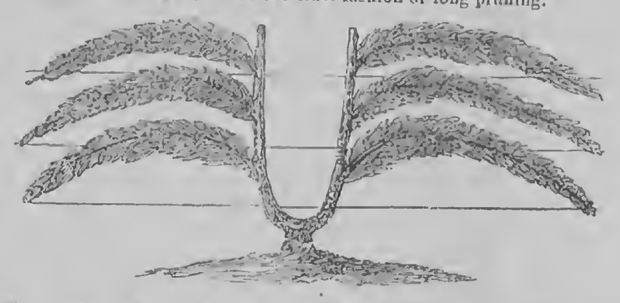

FIG. 5.—DOUBLE PALMETTE WITH ARCHED OR CURVED BRANCHES—THE CURVE DOWNWARDS.

"Among the wall-trees exhibited are excellent double "palmettes," either with the branches trained horizontally, diagonally, or arched downwards. This last fashion, for low walls, in humid localities, is excellent. A "palmette," with double central leaders, and extremities of the branches turned upwards, "a la Verrier," is perfect. It is a pear tree, but this style would suit any variety but the cherry. Specimens of forms with single main leaders are common. The finest is a large peach "palmette a la Verrier." Messrs. Janin and Durand have prizes for apricot and plum trees, and for pyramids. The last present excellent forms, which are well adapted to resist the violence of storms. A four-winged pear standard, the extremities of the branches turned sharply upward, and attached to the nearest shove, is very beautiful. So is a large standard pear at Billancourt, in the center of what is called the Emperor's garden, by Baltet (Troyes,) which is admirably calculated to admit light and air, besides providing resistance against wind. There are other trained forms which require no notice here. Those described are the most characteristic of modern ideas. They have all the leading points necessary for good fruit culture, such as regular symmetry of form, true balancing of either wing, and close attention to systematic summer stopping of the shoots. The visitor will not find here the irregular fan which finds so much favor in England, and is surely so out of harmony even with the present taste for geometrical flower-beds, at least in small gardens, where unavoidably visible."

The English Gardners' Chronicle has a correspondent, who has written a series of excellent letters from Paris on the horticulture of the great Exhibition, in speaking of these horizontal cordon dwarf apples says:—"I am of opinion that it will prove the most successful of all the modes of miniature apple growing ever introduced, and that by its means we may get a crop of the finest apples and have the garden as free of shade as a strawberry ground, and from such places as are now utterly useless or perhaps a trouble or expense to clip once or twice a year." He recommends them to be on the paradise stock, and to be trained about a foot from the ground.

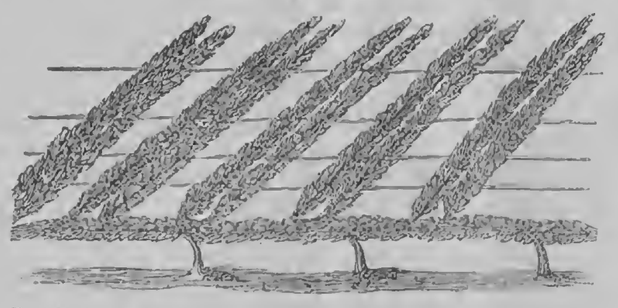

FIG. 6.—DOUBLE ROW OF DIAGONAL PEAR CORDONS—CORDON OBLIQUE DOUBLE.

DWARF APPLE CORDON WITH TWO ARMS.

This form of training the apple commends itself to the proprietors of small fruit gardens in cities and villages more particularly, and, indeed, to all fruit growers who have the time and taste to indulge in what may be called the refinements of the art.

NEW GRAPES.—GEORGE HUSMAN says he recommends no variety for general culture in his locality, unless he has fruited it at least five seasons, and proved it healthy, hardy and of superior quality, either for wine or the table. This is a good practice to introduce generally.

Horticultural Notes and Queries.

OUR HORTICULTURAL PAGE.—Our usual variety in the Horticultural Department gives place this week to an interesting and valuable illustrated article on novel methods of training fruit trees, as exhibited at the late Paris Exposition. Our townsman, Mr. BARRY, who examined the Horticultural Department of the Exposition minutely, furnishes us the subject matter of the article.

PIE PLANT.—Rhubarb or pie plant is "played out" for wine making purposes. Its legitimate use was found when first put into pies in the spring before strawberries ripen; it is possible a supplementary one may be added, when it is converted into vinegar, by the addition of molasses and water and the aid of fermentation. But apple vinegar is preferable.

GRAPE CUTTINGS may be made in the first part of winter and successfully preserved until planting time by tying in small bundles, placing them on their tops in the ground, and covering with half a foot of earth, enough coarse manure to keep out the frost, and boards to keep out the wet. Uncover gradually in the spring as the weather grows warm.

A VETERAN PEACH TREE.—There is a peach tree just below Hawkinstown, Va., that is 53 years old. It has borne fruit large and luscious for 47 years. During the war it was battered, abused, and robbed, by both armies, and no attention was paid to it, but it still bears well.

DRY SEASONS AND THE APPLE CROP.—In excessively dry seasons apple trees become so enfeebled that they are unable to mature a good crop in following years. They blossom and blast. Rich soil and good cultivation are the remedies.

COVERING STRAWBERRIES.—In protecting strawberries for winter, inexperienced persons sometimes cover too deep and smother them. It is the ground full of roots that needs protection; the crowns and stems require but little.

GRAPES IN ILLINOIS.—At a recent meeting of the Aurora (Ill.) Horticultural Society it was resolved that grapes can be successfully and profitably grown in that region of country.

MOULD and sand for hot-beds should be collected against the time of need.

FROZEN TREES should not be pruned.

ESTABLISHED 1861.

THE GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

Oolong (Black,) 70c., 80c., 90c., best $1 ₱ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ₱ lb.
English Breakfast, (Black,) 70c., 80c., 90c., $1, $1,10, best, $1,20 ₱ lb.
Imperial (Green,) 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
Young Hyson (Green,) 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
Uncolored Japan, 90c.. $1, $1,10, best $1,25 ₱ lb.
Gunpowder (Green,) $1,25, best $1,50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 30c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House-Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. ₱ lb., and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, and when the clubs is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

The funds to pay for the good ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the club. Or if the amount ordered exceed $30, we will, if desired, send the goods by Express, to "*collect on delivery*."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third (**besides the Express charges,**) by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

POST-OFFICE orders and drafts make payable to the order of The Great American Tea Company. Direct letters and orders to (as below, no more, no less)

GREAT AMERICAN TEA CO.,
Nos. 31 and 33 Vesey-St.,
NEW YORK.
Post-Office Box 5,643 New York City.

New Advertisements.

A COUGH, a COLD, or a SORE THROAT, Requires immediate attention, and should be checked. If allowed to continue,

Irritation of the Lungs, a Permanent Throat Disease, or Consumption,

is often the result.

BROWN'S BRONCHIAL TROCHES

Having a direct influence to the parts, give immediate relief. **For Bronchitis, Asthma, Catarrh, Consumptive and Throat Diseases,** Troches are used with always good success.

Singers and Public Speakers use them to clear and strengthen the voice.

BRADBURY'S FRESH LAURELS Is his latest, most popular and splendid music book for Sabbath-schools. The music is new, fresh and very attractive. Hymns—short, earnest, **full of Gospel truth,** and adapted to every occasion. EVERY Sabbath-school must have "LAURELS" sooner or later. The author says:—"I never made a book that was so perfect and at once so popular, and gave such **universal satisfaction.**" Price $35 and $30 per hundred. Send 25 cents for specimen copy.
WM. B. BRADBURY, 425 Broome St., New York.

THE BEST ARE THE CHEAPEST.
THE MASON & HAMLIN CABINET ORGANS have just been awarded a FIRST PRIZE MEDAL at the Grand Exposition in Paris, in competition with instruments from the best makers of all countries. This makes over SEVENTY HIGHEST PREMIUMS awarded them within a few years. Testimonials from more than three hundred of the most prominent musicians in the country that these instruments are unequalled, are published in the circulars of Mason & Hamlin.

Observe that dealers in musical instruments are strongly tempted to recommend as equal to the best, those instruments on which they can make the largest profit. The prices of M. & H. are fixed and invariable. They cannot afford the large discounts made by manufacturers of inferior work, many of whom sell at 40 to 50 per cent. discount.

At the prices at which they are sold, the Mason & Hamlin Organs are believed to be not only the best but the cheapest instruments of their class. Send for a circular, with particulars, to MASON & HAMLIN,
596 Broadway, N. Y., or 154 Tremont St., Boston.

THE GREAT STORY OF CROMWELL AND HIS TIMES.
THE NEW BOOK,
By the author of the Schonberg-Cotta Family,
ENTITLED,
ON BOTH SIDES OF THE SEA.
A Story of the Commonwealth and the Restoration.
1 vol., 12 mo., $1,75.

WILLIAM MASON AND E. S. HOADLEY'S New Method for the Pianoforte.
Already a second edition of this new work is ready and nearly sold in advance. It is new in method and matter, embracing modern exercises and expedients not heretofore presented, while its selection of Exercises, Recreations and Pieces, mostly from composers of recognized eminence, is unusually large and very choice.

This is the first instruction book to include the technicals of modern pianoforte playing. It has a full elucidation and illustration of Mr. Mason's new system of Accentual Treatment of Exercises, by which the attention of the pupil is almost compelled, and careless practice is rendered nearly impossible, while not only the hands, but also the mind, taste and artistic perceptions are cultivated and trained.

It is eminently a practical work, the result of long and most successful experience in the actual business of pianoforte teaching. It is carefully progressive, very clear and perspicuous and full in its explanations and directions, illustrated by cuts and diagrams, and is adapted to the use of young beginners as well as those who have made progress. 240 pp., large 4to. Price $4. Two editions are published; one with AMERICAN and one with EUROPEAN FINGERING. Care should be taken to designate which is wanted. Published by
MASON BROTHERS, 596 Broadway, New York.
MASON & HAMLIN, 154 Tremont St., Boston.

Ladies' Department.

TO ELLA H*****.

BY ANNA, MINSTREL OF THE HEATH.

A BRIDE? dear ELLA—this is gladsome news,
Tho' not news unexpected unto me,
And fain would I invoke my happiest muse
An Epithalamium to sing to thee;
But well I know in thy sweet joy's excess
All worldly compliments were emptiness.

I'll therefore not attempt so vain a thing,
But merely banishing each shade of sadness,
My heart her humble offering shall bring,
Caught from the echoes of thine own soul's gladness.
From Hymen's Altar let me snatch some fire,
And wake the slumbering spirit of my lyre.

Come then, my gentle lyre, with soft, low voice,
Like spirit-whisperings floating on the air;
In dulcet tones tell ELLA I rejoice,
She now has one her heart's bright hopes to share.
Around her bridal bower, go linger near;
Though pledg'd her Heart and Hand—*claim* thou her *Ear*.

Yes—ELLA dear—may you taste every bliss,
And *realize* HOPE'S every future joy;
And know the blessing (in a world like this)
Of mutual Love—with least of earth's alloy.
May Hymen's torch blaze bright thro' passing years,
Undimm'd by Time—unquench'd by sorrow's tears!

May bright-haired Cupid strew thy path with flowers,
Dropping sweet odors from his rainbow wing,
And FATHER TIME, with roses twine the hours,
As from his glass to circling years they spring.
ELLA—may every good to thee betide,
And wife of years, be happy as the Bride.

May Fate for thee uncoil a sunny skein,
Rich with the hues of love, content and gladness;
Without one single spot, or shadowy stain,
To cloud thy brow with e'en a fleeting sadness.
Farewell! Farewell! Accept this simple wreath,
Dear ELLA—from the *Minstrel of the Heath*.
Rochester, N. Y., 1867.

FRENCH OPINION OF OUR LADIES.

THE theory which makes a woman a queen in chains, governing by the graces of her charms and beauty, is in full bloom on the other side of the ocean. The first duty and first pride of an American husband consists in seeming pleasant idleness to his wife and providing the expense of her toilet. There are many female office-holders in the United States, in the schools, in the public service, in the post-offices, in the telegraph bureaus, and even in the Government departments. They are mostly unmarried, a state very frequent in New England, which rivals Old England, so far as the surplus of her female population is concerned; they resign their positions when they marry. "I shall not allow my wife to work," is the proud word of the husband, which at the same time involves the dependence of the wife. But, save an emancipation party formed under the auspices of Mrs. Stanton, the American women submit wonderfully well to their role of spoiled children, and are quite as worldly as our European women. They strive to eclipse them only by the extravagance of their toilets, of which they are passionately fond. Hence, notwithstanding the beautiful freedom of seeing and becoming acquainted with each other, which the young folks enjoy in America, we are much afraid that pure love, disregarding the expenses of an independent family establishment and bridal presents, has not yet been naturalized in any country in the world.

American costume, it is well known, grants to young ladies the most unlimited freedom of action. Charged with watching over their own virtues and interests, they protect and preserve them only the better. Aware of the dangers of life, they are able to brave them; but we must say that this task is easy for them, thanks to the respect with which the lords of creation treat them. A young lady can travel from one end of the Union to the other without being insulted by shameful propositions. A young American girl already presents quite a different aspect from her French sisters. Her very costume looks somewhat more independent. The young ladies of the United States were the first to adopt the little masculine hats—they can be hardly called bonnets—which are put on the forehead, and leave visible the ungainly waterfall. They like to wear short skirts richly adorned with jet ornaments, and to incase their feet in high gaiters: the *suivezmoi's* of all sorts flow down their shoulders. If they are destitute of the timid gracefulness, the necessary uniform of our young girls in France, they possess, on their part, the gracefulness of liberty. They have firm faith in themselves. They walk as daughters of a conquering race, which clears for herself a place in the sunshine. And if this disposition, as grumblers say sometimes, assumes the character of arrogance, we know that it is a weakness of all countries to carry their good qualities to too great lengths.

DEAR is a pleasant adjective—my a pronoun of possession, implying that the being spoken of is one's own, very own, property. We rather object to "dearest," as a word implying comparison, and, therefore never to be used where comparison should not and could not exist. Witness, "dearest mother," or "dearest wife," as if a man had a plurality of mothers or wives, out of whom he chose the one he loved best. And as a general rule we dislike all ultra expressions of affection set down in ink. We once knew an honest gentleman, blessed with one of the tenderest hearts that ever man had, and which in all his life was only given to one woman. He, his wife told us, had never, even in their courtship days, written to her otherwise than as "My dear Anne," ending with "Yours faithfully," or "Yours truly." Faithful—true—what more could he write, or she desire?

WINTER.

THE beautiful illustration given above is so expressive as to need little explanation. It represents one of a series of groups of the four Seasons, modelled in Florentine bronze, exhibited at the late Paris Exposition by M. DETOUCHE. We have had the series engraved expressly for the RURAL NEW-YORKER, and shall give the remainder in due time.

THE TRAINING OF GIRLS.

THE truth is that in a human being, even from the physical point of view, it is rather a dangerous thing to ignore the intellect and the emotions. Nature resents being ignored. If you do not cultivate her, she will assuredly avenge herself. If you do not get wheat out of your piece of ground, she will abundantly give you tares. And there can be no other rule expressly invented for the benefit of fashionable young women. Their moral nature, if nobody ever taught them to keep an eager eye upon it, is soon overgrown, either with flaunting poison plants, or at best with dull gray moss. The parent dreams that the daughter's mind is all swept and garnished. Lo, there are seven or any other number of devils that have entered in and taken possession, more or less permanent. The human creature who has never been taught to take an interest in what is right and wholesome will, in ninety-nine cases out of a hundred, take an interest in what is wrong and unwholesome. You cannot keep minds in a state of vacuum. A girl, like anybody else, will obey the bent of the character which has been given either by the education of design, or the more usual education of mere accidental experience. Everything depends, in the ordinary course of things, upon the general view of the aims and objects of life, which you succeed, deliberately or by hazard, in creating. A girl is not taught that marriage has grave, moral and rational purposes, itself being no more than a means. On the contrary, it is always figured in her eyes as an end, and as an end scarcely at all connected with a moral and rational companionship. It is, she fancies, the gate to some sort of paradise whose mysterious joys are not to be analyzed. She forgets that there are no such swift-coming, spontaneous paradises in this world, where the future can never be anything more than the child of the present, indelibly stamped with every feature and line of its parent. This castle building, however, is harmless. If it does not strengthen, still it does not absolutely impoverish or corrupt characters. Of some castle building one cannot say so much. Character is assuredly corrupted by avaricious dreams of marriage as a road to material opulence and luxury. There is, indeed, no end to the depraved broodings which may come to an empty and undirected mind. If the emotions and the intellect are not tended and trained, they will run to an evil, and evil propagating seed. Rooted and incurable frivolity is the best that can come of it; corruption is the worst.—*Saturday Review.*

AMUSING THE CHILDREN.—A Boston clergyman, who believes in amusements if properly conducted, says it is quite curious to note how many of our people have attended the circus the past week, only because they wanted to "please the children;" but still more curious to observe that in very many instances it has taken two or three able-bodied men, with as many strong women, to look after one darling little boy or girl.

THE sweetest wives are those who possess the magic secret of being contented under any circumstances. Rich or poor, high or low, it makes no difference; the bright little fountain of joy bubbles up just as musically in their hearts.

THERE should be, methinks, as little merit in loving a woman for her beauty as in loving a man for his prosperity, both being equally subject to change.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

MY WILLIAM.*

BY KATE WOODLAND.

"O'ER graves of the loved ones plant beautiful flowers,"
Thus flows in sweet measure the Poet's sad lay;
But alas! far away beneath fair Southern bowers,
Below the cool zephyrs, and soft falling showers,
My WILLIAM is sleeping to-day.

It may be that thistles alone deck the grave,
Where the garment is laid which my WILLIAM did wear,
But the heart it contained was both loyal and brave,
And the country he loved he has perished to save:
What need that the grave blossoms bear?

Perhaps some fond sister or mother may see,
As she seeks the blest spot where her loved ones repose,
That dear to some heart must his lonely bed be,
And plant o'er the grave of my WILLIAM, for me,
The myrtle, and sweet-scented rose.

When daylight is dim, and the twilight is red,
And my little ones glide from their play to my knee,
And ask for "Papa," who I tell them is dead,
The tears that in sweet childish sorrow they shed,
Seem additional grief unto me.

And yet to the FATHER, who counteth each tear,
My fervent thanksgiving goes forth evermore,
That these little blossoms are left to me here;
And lovingly them let me cherish and cheer,
Nor idly my sad loss deplore.

* Written for a friend.

Written for Moore's Rural New-Yorker.

HOW THINGS COMBINE.

No science, or trade, or profession, can get along well alone. History is very much aided by geography; algebra is dependent on arithmetic; grammar is closely interwoven with philology. And so of the trades and professions. Each one is more or less connected with others. The physician depends on the farmer for his food and on the mechanic for his clothing. Indeed, no one is independent. The farmer, himself, who furnishes the necessaries of life, would find great difficulty in getting along without tools and implements. He must have some of the trades to help him, as much as they must have him to help them.

All are mutually dependent and bound to each other. Such is Christian and civilized society; so are the different powers and faculties of man. Reason and judgment are just as necessary as physical strength and health. A strong arm or a stout muscle would be of little avail without a mind to direct or a will to execute. Neither the physical, moral, nor mental powers can get along alone. What is a great memory without reason? What is a vivid imagination without sense? Or what are great physical abilities linked with feeble mentality?

Things must be combined to produce the best results. The mind, the soul and the body all need to be in health to enable a person to accomplish the best of which he is capable. Weakness or feebleness in any part has its influence in weakening or enfeebling the action of the rest; any one left out entirely must have a serious effect on the economy of the whole. If a man gives all his efforts to acquiring physical health and strength, he may have a weak mind; and if a man devotes too much attention to cultivating his mental faculties, he may have a sickly body. If he gives no time to his soul or moral powers, he may fail of the proper discretion and discernment.

A great mind without honesty or good intention may only lead to perversion. The best advantages without industry may be wasted. A large stock of knowledge may amount to nothing when there is not moral power enough to use it to advantage. Great abilities in a trade or a profession may not accomplish much for the world, when they are connected with dishonest or vicious habits. Vice enfeebles the best powers and wastes the finest opportunities. One subtle bosom sin often destroys every other faculty and advantage, so intimately are the moral, the mental and the physical powers connected.

Nature itself,—the fields, the plants and the animals,—partakes more or less of this combination. Indolence has its effect on the productiveness of the fields. Intelligence and industry go a great way towards improving the growth of plants. How much animals depend on the care and kindness of man. All are bound together, more or less. The productiveness of a country is very closely connected in some cases with the moral state of the people. A vicious, indolent or thieving people will soon show their influence in the amount raised on the land. Hatred, strife, violence and bloodshed have their effects on the physical world. A country full of insecurity and crimes cannot long be as productive as one full of industry, virtue and goodness. In other words, the religious element enters into all these things, just as much as the moral and physical elements.

The spiritual world is a necessary part of the actual. Both and all are combined, and neither one can get along well without the other. As the soul, body and spirit all are one man, so the various faculties and powers of each are all necessary to the healthy and vigorous action of the others. None are sufficient alone. Religion is beneficial to your studies, to your trades, and your professions. Christianity is advantageous to agriculture,—to farming, to your crops, your productions, your harvests,—as well as to your health, happiness and peace, both here and hereafter. NOVA.

NEVER despond. Though the mid-day sun may be hidden from our eyes, we know that it is shining serenely upon the upper surface of the cloud.

MANNERS AND MORALS.

MANNERS easily and rapidly mature into morals. As childhood advances to manhood, the transition from bad manners to bad morals is almost imperceptible. Vulgar and obscene forms of speech keep vulgar and obscene objects before the mind, engender impure images in the imagination, and make unlawful desires prurient. From the prevalent state of the mind, actions proceed, as water rises from a fountain. Hence what was originally only a word or a phrase, becomes a thought, is meretriciously embellished by the imagination, is inflamed into a vicious desire, gains strength and boldness by being always made welcome, until at last, under some urgent temptation, it dares, for once, to put on the visible form of action; it is then ventured upon again and again, more frequently and less warily, until repetition forges the chains of habit; and then language, imagination, desire and habit bind their victim in the prison-house of sin. In this way profane language wears away the reverence for things sacred and holy; and a child who has been allowed to follow, and mock, and hoot at an intemperate man in the streets, is far more likely to become intemperate himself than if he had been accustomed to regard him with pity, as a fallen brother, and with secret abhorrence, as one self-brutified or demonized. So, on the other hand, purity and chasteness of language tend to preserve purity and chasteness of thought and of taste; they repel licentious imaginings; they delight in the unsullied and the untainted, and all their tendencies and aptitudes are on the side of virtue.—*Horace Mann.*

PERSONAL GOSSIP.

THE New York correspondent of a Boston paper says of the firm of Messrs. HARPER & Brothers:—The firm, one of the largest in the world, is the most extensive in America. It was founded in 1816 by JAMES and JOHN HARPER. WESLEY HARPER came in in 1822, and FLETCHER HARPER in 1826, since which the firm has stood as it stands now. It is not often that four brothers can be united so long, with no break in the rank by death or other cause. Honorable JAMES HARPER—Honorable because once Mayor of New York—is about seventy-three years of age, and there is no youth about the establishment more active than he. He delights in a good story, a good listener, a good joke, and no one can discover a reason why he shouldn't live twenty years yet. Mr. JOHN HARPER is about seventy, but not so robust in health as his brother JAMES. He is the negative element in the firm, and commonly wields the veto power. Mr. WESLEY HARPER is gentlemanly and cordial, comforting a disappointed author, and encouraging a promising one with equal suavity. Mr. FLETCHER HARPER is the active, aggressive spirit of the firm, but with a vaulting spirit that never o'erleaps itself. It is his spirit that animates and directs the "Monthly," "Weekly" and "Bazar." Besides the four members of the firm there are numerous sons, making a dozen in all. The HARPERS resemble English firms in the tenacity with which their employees cling to them. There is one gray-headed octogenarian who has been in their employ fifty years.

OF MENOTTI GARABALDI, son of the Italian Liberator, the London Court Journal says:—He was born 16th of September, 1840, at a miserable shanty situated on the Pampas of La Plata, when his father, and his mother too, battled for the Republic of Rio Grande. GARIBALDI had gone during the morning to a neighboring town to purchase clothes for the mother and the expected little stranger. On his return he heard the new born's voice, and kissing his young wife, took the baby in his arms. "What shall we call him?" said the mother. "MENOTTI," replied the father; "better the name of a martyr to liberty than a saint's." Surprised almost a few days after her accouchment by an attack from the enemy, the mother wrapped MENOTTI in his father's cloak and, but half dressed herself, jumped into the saddle, strapping the child across it, and galloped to the forest, pursued by the enemy, to meet her husband and his companions in arms. Since then MENOTTI has shared the reward his father holds out to his followers—hunger, thirst, want, and marching night and day. He is always calm and smiling; is of the middle height, large shoulders, full of courage and boldness—a stoical soul in an iron body.

WIT AND WISDOM.

WHEN a robber takes life and money it may be called a *purse-an'-all* attack.

ANCIENT and modern Greece—Whale Oil and Petroleum.

NEVER indulge in what appears to be a little sin; it will harden the heart, and lead to greater.

IN matters of conscience, first thoughts are best. In matters of prudence, last thoughts are best.

IF a man is out of money he shows the least of it. When he is out of temper he shows the most of it.

ALL authority flows from reason, and ought to lose its force in proportion as it deviates from its source.

TEARS at a wedding are only the commencement of the pickle that the young folks are getting into.

A FOOL in high life is like a man in a balloon—everybody appears little to him, and he appears little to everybody.

ONE charge in a lawyer's bill against a client was, "for waking up in the night and thinking of your business—five dollars."

EVERY parent is like a looking glass for his children to dress themselves by. Therefore parents should take care to keep the glass bright and clear.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

SOWING AND REAPING.

BY MARY KELSEY.

LONG ago upon the hillside,
In the valley, o'er the plain,
From the early morn till even
Busy hands were sowing grain;
Trusting that the storm and sunshine
Should each tiny leaf unfold,
Till the golden wheat had ripened,
Yielding more than hundred fold.

Harvest comes, the grain is gathered,
And they place a wealth of sheaves,
One by one, till all are garnered,
Safe beneath the sheltering caves.
And with glad and joyous footsteps
Laborers at twilight come,
And with cheerful happy voices
Shout the golden harvest home.

Often weary in well doing,
We have sown in doubt and fears,
From the morning until even,—
Sowing oft with bitter tears.
When the harvest shall be gathered,
Many tares and withered leaves
Will be bound among the bundles,
With our treasured golden sheaves.

When our sheaves have all been counted,
And their value has been told,
When our treasure has been garnered
In our Heavenly Father's fold;
When our happy joyous foot-steps
In life's twilight heavenward come,
May we hear sweet angel-voices
Welcoming our harvest home!

Trappe, Talbot Co., Md.

PLEASANT WORDS.

WHENEVER we say a kindly, sympathetic word through the columns of the RURAL, we feel a peculiar pleasure in knowing that our many thousand readers will take it home to their hearts, even as though we should speak it with their hands clasped in our own. And we appropriate, also, in a certain sense, this same feeling, whenever any of our contributors touch a chord which vibrates far and wide its sweet, solacing music, and imparts a happifying influence. That our column of Sabbath Reading is highly prized by a large circle, we are well aware. Frequent assurances to this effect come to us, and they afford a real delight. A letter recently received from one friend, alludes to a poem entitled "De Profundis," which appeared in a late number of the RURAL, and says:

"Bear my sincere thanks to the author of that sweet poem. It seems to me some pitying angel must have been looking into the crushed depths of my heart of hearts, and whispering its moaning secret to her ear, inclining her to breathe out a hope of mercy through the Cross of CHRIST. I caught the words of comfort, and feel that a bond of sympathy is clasped and sealed by that one poem.

"And those selections," the writer continues, "'Past Pain' and 'Little Plaid Sun-bonnet,' are worthy a tribute of thanks; also, that portion of 'Loungings,' which told of a Sabbath in our great metropolis, came with 'healing in its wings.' He heard the words 'Behold, we count them happy which endure,' and I am glad that from the vaulted roof the echo came 'Happy which endure.' But what is it to endure? It is not a crimson-cushioned worship alone, but the homage of a 'broken, contrite spirit.' It is to suffer *with* CHRIST. He was despised and rejected of men; he was esteemed stricken, smitten of GOD and afflicted. In the hour of his most dreadful human need, his chosen friends slept on unmindful of his agony and approaching death. At thought of this our shrinking souls cry out, 'Who is sufficient for these things?' But from above the words come down, 'My grace is sufficient,' and our hearts respond amen! 'We can do all things through CHRIST, who strengtheneth us.' GOD will press no cup to our sinful lips too bitter for our cure. Though he slay us, yet will we trust in him, for we know above the deepest darkness a crown of glory awaits the suffering soul, and from the portals of Heaven a Father's welcome, saying, 'Enter thou into the joys of thy Lord.'"

OLD AGE WITHOUT RELIGION.

ALAS! for him who grows old without growing wise, and to whom the future world does not set open her gates, when he is excluded by the present. The Lord deals so graciously with us in the decline of life, that it is a shame to turn a deaf ear to the lessons which he gives. The eye becomes dim, the tongue falters, the feet totter, all the senses refuse to do their office, and from every side resounds the call, "Set thine house in order, for the term of thy pilgrimage is at hand." The playmates of youth, the fellow-laborers of manhood, die away, and take the road before us. Old age is like some quiet chamber, in which, disconnected from the visible world, we can prepare in silence for the world that is unseen.

THE RIGHT KIND OF RELIGION.—I want, says Uncle Nick, and we all want a religion that not only bears on the sinfulness of sin, but on the rascality of lying and stealing—a religion that banishes all small measures from the counters, small baskets from the stalls, pebbles from cotton bag, and from sugar, chicory from coffee, alum from bread, lard from butter, strychnine from wine, and water from milk cans. The religion that is to advance the world, says Uncle Nick, will not put all the big strawberries and peaches on the top and all bad ones at the bottom, and will not offer more baskets of foreign wines than the vineyards ever produced in bottles.

LINKING TWO CHRISTMAS-TIMES.

[Concluded from page 412, this number.]

CHAPTER III.

FIVE years more and HOWARD LANDOR had recrossed the sea and was *en route* homeward. It was on the day before Christmas that he landed. After a hasty interview with his partners in the metropolis, his determination was taken to spend the holidays with those from whom he had so long been separated.

During the wearisome railroad journey of several hours' duration, which followed, he had abundant leisure to picture the changes that must have taken place in his absence, and to wonder who of his old friends would recognize him, so changed as he was. While thus engaged, he observed for the first time the occupant of the seat opposite his own, and his heart thrilled strangely as he remarked the strong resemblance she bore to her who was once his AGNES. Very like, indeed, was she, to the loved and dead; and he so seated himself as to have her form directly within his line of vision.

He could see points of difference more marked, after a little. The unknown lady had hair several shades darker than the tresses he so much admired ten years agone, and her face was not the same upon which he printed those passionate kisses of his early love. But the face set him thinking once more of that, as he had not thought in years, until his far-away life drifted further away than across the seas, even as the old pleasure and pain had long ago faded in the dim distance, while these were of the yesterday that still lingered on the threshhold of to-day.

A peculiar desire possessed him, by-and-by, to speak to her who unconsciously interested him so greatly. Some good fortune rendered a little act of courtesy not intrusive on his part, and he presumed so far upon it as to exchange his seat for one by her side, and attempt conversation. He had not lost a certain indescribable charm of manner, in his exile from social life, and this ere long won for him cordiality. Therefore when the twilight came on, and the rural city of L—— was but a score of miles distant, they were chatting as familiarly as old friends.

She had such a rare, round, melodious voice as we hear but seldom—seeming ever full of music striving for utterance. It was like, and yet unlike, another voice that he remembered; and more than once he found himself sounding her words over in his mind, as gold is sounded in testing, to catch a peculiar ring that his ear claimed as an old acquaintance. But the similarity lessened, as he listened more closely; the present voice was fuller and deeper than the past, and its music had a sadness here and there which was singularly charming to him in its newness. So he talked and listened, and the suggestive tones hurried him onward to home and friends faster even than the swift-speeding train.

I doubt if HOWARD himself could tell just how it came about that personal experience was broached. Some ends seem to be arrived at in a manner entirely unaccountable. Possibly the fact that he had seen little of feminine society these many years, made him more communicative,—it must have been so. For he told her of his life under a tropical sun—his long absence from home and friends—and how he was now coming back to search out the old faces and find somewhat of love and friendship to gladden the years to come.

"There ought to be very much of both, for you, yet," she said. "You are by no means too old to gather love's sweetness from some warm heart, and the social joys will be doubly dear because so long foregone."

"I knew love's gladness once," and he looked out upon the city, whose lights glimmered in the distance, with a dreamy recollection; "but it is only a sad memory now. Mine was a true heart's love, but it met not a true return, and hungers evermore with a longing that may not be satisfied. Over yonder at Ingleside we parted; and while I tarried over sea she crossed the broad river whence none come back."

He did not notice the smile that crept over the face by his side, in which was the glad realization of hope and patient waiting, but his heart thrilled to the tremor in the voice that said:

"What if she lives still, HOWARD, and has been ever loving and true, caring only to be yours?"

Then he saw his AGNES, a little older grown, a few shades altered, but beautiful as ever to the eyes of love, and made answer the while he wondered:

"Then will I indeed gather love's sweetness, and find a ripe reward."

And this was their meeting. The AGNES LIVERMORE dead belonged to a remote branch of the family, and the living AGNES was on her way to Ingleside again. Thus were two Christmas-times linked together with a bond pure and holy, that should know no breaking,—for when New Years' evening closed the holiday festival a nuptial party assembled at the old mansion; "what GOD hath joined together let not man put asunder," was spoken; and two hearts began to gather love's sweetness that were to gather it in joy henceforth forever after.

THE nearest approach to a brute that man can make is to become a mere creature of appetite—a feeder, a toper. So long as he is well fed, or well crammed, a glutton is a stupid, harmless lump; but deny him his provender and he becomes a savage. Govern the appetites, or they will become tyrants, under whose bondage all that is noble in the human character will be crushed out of existence. Besides, indulgence of the appetites in time destroys health; and what is life without health?

BE always at leisure to do a good action, never make business an excuse for avoiding offices of humanity.

VIEW OF THE PROPOSED NEW STATE HOUSE AT SPRINGFIELD, ILLINOIS.

As a people, we are beginning to pay proper heed to architecture. The old crude and narrow notions concerning it are giving way to well defined and liberal ideas, that of late years have been manifest in a growing regard for rich and massive public buildings. Our National Capitol is a truly magnificent edifice, and may well be a source of national pride. And there are a few State Capitols, erected within a decade, which reflect credit upon the respective Commonwealths that reared them. Ohio has one of these, Tennessee another,—both elegant and costly monuments of popular good taste and enterprise,—and when the war broke out South Carolina was busily engaged in erecting another, not less magnificent. The Capitol of our own Empire State has long been a source of mortification to public-spirited citizens, being utterly devoid of beauty, meagre in appointments, and in every respect inadequate for its purposes. We are happy to know, however, that a structure worthy of the position New York holds as the first State in the Union, is soon to take its place. Under the act passed by the Legislature last winter, providing for a new Capitol, plans have been accepted by the Commissioners, and on the 9th inst. ground was broken at Albany for an edifice which it is thought will approximate to that at Washington in beauty and elaborateness of design. We hope to give an illustration of it in a future number of the RURAL.

Illinois took the initial steps for a new Capitol last summer, and we give herewith a view of the building, at Springfield, as it is to be. The ground plan of the building is that of the Greek Cross, arranged to present four fronts of similar style. The style is in the Corinthian order. The northern, eastern and southern fronts of the superstructure are each to be supplied with a portico of eight detached columns in front. The western façade presents the same exterior, excepting in entering the building you pass into the basement through a stylobate, the portico not projecting as far as on the opposite front. The dome comprises two stories, first ornamented with full columns, and the second with pilasters. On the top of the latter springs the dome proper, surmounted by a lantern. There will be a balustrade on the top of the entablature of the first story, consisting of pedestals and balusters. The entire dome, from the ground to the top of the lantern, is 254 feet; at its base 83 feet in diameter, outside of walls. The interior is to be finished in elaborate style.

Reading for the Young.

SONG FOR THE CHILDREN.

Come, stand by my knee, little children,
Too weary for laughter or song;
The sports of the daylight are over,
And evening is creeping along;
The snow fields are white in the moonlight,
The winds of the winter are chill,
But under the sheltering roof-tree
The fire shineth ruddy and still.

You sit by the fire, little children,
Your cheeks are ruddy and warm;
But out in the cold of the winter
Is many a shivering form.
There are mothers that wander for shelter,
And babes that are piping for bread,
O! thank the dear Lord, little children,
From whose tender hand you are fed.

Come look in my eyes, little children,
And tell me through all the long day
Have you thought of the Father above us,
Who guarded from evil your way?
He heareth the cry of the sparrow
And careth for great and for small,
In life and in death, little children,
His love is the truest of all.

Now go to your rest, little children,
And over your innocent sleep,
Unseen by your vision the angels
Their watch through the darkness shall keep.
Then pray that the Shepherd, who guideth
The lambs that he loved so well,
May lead you in life's rosy morning,
Beside the still waters to dwell.

TALKS WITH OUR BOYS AND GIRLS.

BY UNCLE PAUL.

THE EASIEST WAY.

WELL, well, young friends, Winter is here at last, isn't it? Now for the skating and coasting you dreamed of when the frost first set the fields glistening! Now for the merry times, the jolly sleigh-rides, the glad bell-music, and the glowing cheeks!

There is joy for the boys and girls everywhere in the first snow storm. CHARLIE goes out and flounders through the fast-forming drifts, half losing himself amid their light piles, and so probably do thousands on thousands of other CHARLIES and HARRYS and FRANKS, who tie their trowsers tightly around their ankles, draw their "car-tabs" down, and defy the cold.

"Coasting is grand sport!" So CHARLIE said this morning, on coming in from a trial of it, upon the hillside. Ah! we know it. We have bright memories of certain clear, crisp and bright nights set away back yonder somewhere in the years, when we coasted to our heart's content. No, not quite that, either, for we are not apt to do anything entirely to our heart's content; but when we had the merriest and gladdest little coasting parties, in the moonlight, and skimmed over the glassy snow-crust right gloriously.

But there is one drawback to riding down hill. "Isn't it a *draw-up*, Uncle PAUL?" asks CHARLIE. He has hit the word better than we did, probably because his recollections of climbing the hill for the sake of gliding down it are more recent than ours.

Going down is the easiest. We found it so about the first time we tried riding down hill. There was a good quantity of snow on the ground, then came a slight rain, then a freeze, and we had a splendid crust, as slippery as ice. A sleigh then was not numbered in our possessions, but somehow coasting must be enjoyed. The steep hill back of the orchard was too tempting to be resisted. So we got a short piece of plank, which happened to be very smooth on one side, mounted it, and sped down the hill like an arrow. Then we picked up the novel sleigh, and started for the top again. But going up was not readily accomplished. The crust was very slippery; and so were our boots—our first pair, by the way. Climbing that hill was the hardest feat we performed during boyhood. A half dozen times we nearly reached the top—then a slip—and away we went back to the bottom, in a jiffy. Perhaps we shouldn't have persevered long had not home been at the top of the hill.

And we have found ever since that time, young friends, that it is always easiest to go down. Therefore, we ought to be extremely careful, in whatever we do, not to go down without something very desirable is to be gained. *Going up* is always best. The easiest way may be pleasantest, for a while, but by-and-by, when it proves not to have been the best way, you will realize how hard an up-hill road is, and particularly when nothing has been won by going down it. All the good paths in life lead upward. Remember that, won't you? Remember, also, that while sliding down hill is very good, *in play*, it isn't well to practice it long in *sober earnest*.

NO PLACE.

A GREAT many boys and young men complain there is no chance for them. It is hard to find anything to do. Perhaps it is hard to get just such places as they would like. That is not the point, however. When you get a place—and there are places; this big country, I am sure, has need of every good boy and girl and man and woman in it—when you get a place, I say, make yourself useful in it; make yourself *necessary* to your employers; make yourself *so* necessary, by your fidelity and good behavior, that they cannot do without you. Be willing to take a low place at first, no matter what the work, if it be honest work. Begin at the lowest round of the ladder and *climb up*. The great want everywhere is faithful, capable workers. Make yourself one of them, and there will always be a place for you, and a good one.—*Child's Paper.*

Educational.

Written for Moore's Rural New-Yorker.

HABITS IN THE SCHOOL-ROOM.

FOR more than twenty years, nearly every winter has found me in the school-room encircled by youth. And I find it to my advantage to be surrounded by these *young guards*, for they keep me *young* in feeling and call forth all the skill I possess. I may say I *love* teaching. This winter I ride three miles and back for the privilege of spending a few hours every day amid the young.

In teaching, the aim of an instructor should be to give the proper bias to the youthful mind. When I commence a school, the first thing I do is to get my scholars in position. Many scholars sit and stand *all in a heap*. This I cannot tolerate, for I know that the Almighty designed men to have an *erect* posture. I think a good deal of *the perpendicular position*. So much, indeed, that if I were a military Professor I should instruct the cadets to ignore aiming in a *horizontal* position, and fire off their carbines altogether in a perpendicular direction. In these new tactics, which I hope to see superseding all others, the order would be,

When e'er you shoot, shoot upward, men.
Take aim towards the sun;
The grass does so, the wheat, the cane,
And flowers every one.

Next to posture, or *keeping straight* upon the seat or in class, is *keeping still*. Teaching scholars habits of self-control is where comes in the tug of war. This breaking-in process requires patience of a high order. JOB was said to be a very patient man, but I doubt if he ever taught a common school. There are so many things to be done in the little circle of the school-room—every day "line upon line, here a little and there a little"—that the list is almost endless. Among other things, neatness, politeness and punctuality should be inculcated. I endeavor to impress it upon my pupils that the *School Car* starts at nine o'clock. I also give notice that there is to be no crossing the floors faster than a walk. Perhaps there is no place in the world where so much advertising is needed as in the school-room. There is a sort of "irrepressible conflict" going on between the wishes and rules of the teacher, and the heedlessness, forgetfulness and inattention of those under his care.

As a teacher I make a large allowance for young scholars. In all these matters the teacher should *lead off and set the example*. He is, so to speak, *the copy*, which all more or less follow. If his habits of position, punctuality and self-control are bad, woe to the school over which he presides. Ostensibly the pupils come to study the sciences, but they also study their teacher. They catch his look, his temper, his tone of voice, and even his walk. Many suppose that there is nothing as catching as the measles and small pox. This is a grand mistake. Bad habits are fully as contagious as any *disease* that can be named.

But enough on these points. In conclusion a word of exhortation to my fellow teachers. Resolve this winter, (the first under the new school law,) to keep a *model school*, and one that shall excel any other over which you have been called to preside. Having stuck your stakes and drawn your line, stand by them through evil and good report. With "Excelsior" written upon the banners you fling to the breeze, and "Thoroughness" your motto in teaching, success must crown your efforts. OLD TEACHER.

North Chili, N. Y., 1867.

HOME AND SCHOOL EDUCATION.

HE who directs, develops, instructs, disciplines and leads into the ways of health, usefulness and life the pliant soul of youth, is a co-worker with Him who came from heaven as the Great Educator; who took little children in his arms and blessed them; who taught the people many things in every place where he found them; teaching them daily in all knowledge as never man taught. I say the pure educator is a co-worker with Him who came from above to teach, and who spoke of wisdom as the principal thing.

This world is but the passage to another, and through it lie two ways—the way of folly and the way of wisdom. The starting point is the cradle. The way of folly is the way of disobedience and darkness, leading to death; the way of wisdom is the way of obedience and light, leading to life. A proper education will lead the child from the way of folly into the way of wisdom. Parents are the educators—teachers and books are but aids in the great work. A true and efficient system of education is *home* and *school* influence united. Education begins at home; the child is sent to school to be taught what the parent has neither time nor ability to teach.

Where home and school training are combined, there is efficiency. "In union there is strength." Here lies the ground-work of the power, the eminence, the glory, the happiness, the prosperity of the nation—the church and the State.

It is a mistaken idea which some persons have, that the machinery of education is altogether confined to the school room. To educate the human being correctly, is to develop body, mind and heart from infancy. And it is only when home and school education work in unison, that this, the greatest of all earth's work, is properly wrought.—*Selected.*

CELESTIAL AND TERRESTRIAL GLOBE.—Dr. H. Williamson has just patented a very ingenious combination of celestial and terrestrial globes, giving to the student a vivid picture of the relation of the sphere of the heavens to that of the earth. The outside celestial globe, inclosing the other, is made of glass, and on it are gilded the stars. The outlines of the constellation figures are painted in transparent colors, so that the view of the earth within is not obscured.

EDUCATION is a companion which no misfortune can depress, no clime destroy, no enemy alienate, no despotism enslave. At home a friend, abroad an introduction, in solitude a solace, in society an ornament. It chastens vice, it guides virtue, it gives grace and government to genius.

KINDLY admonitions are better than harsh punishments.

Useful, Scientific, &c.

WHAT WE ARE MADE OF.

THE following is from an article by Dr. O. W. HOLMES:

If the reader of this paper lives another year, his self-conscious principle will have migrated from its present tenement to another, the new materials of which have not been put together. A portion of the body which is to be, will ripen in the corn of the next harvest. Another portion of his future person he will purchase or others will purchase for him, headed up in the form of certain barrels of potatoes. A third fraction is yet to be gathered in the Southern rice fields. The limbs with which he is then to walk will be clad with the flesh borrowed from the tenants of many stalls and pastures now unconscious of their doom. The organs of speech, with which he asks so wisely, and speaks so eloquently, or speaks so effectively, must serve his humble brethren to bleat, and to bellow, and all the varied utterance of bristled or feathered barn-yard life. His bones themselves are, to a great extent, in posse and not in esse. A bag of phosphate of lime, which he has ordered for his grounds, contains a large part of what is to be his skeleton. And more than all this, by far the greater part of his body is nothing at all but water; the main substance of his scattered members is to be looked for in the reservoir, the running stream, at the bottom of the well, in the clouds that float over his head, or diffused among them all.

THE THEORY OF METEORS.—Sir John Herschel has recently advanced the theory, not wholly new, but never before supported by well-known facts, that meteoric showers are simply the light caused by the collision of the earth's atmosphere with the tenuous substance of a comet. Prof. Adams, who shared with Leverrier the credit of discovering the planet Neptune, not only accepts this theory but attempts to establish the identity of the comet through which the earth recently passed with Tailler's comet, whose orbit apparently coincides with that which, if a comet, the recent visitor would have taken. Those who have read Prof. Tyndall's work on heat, may find in this theory an additional reason to accept the learned writer's hypothesis as to the origin of the sun's light and heat.

OUR EXPORTS.—The exports of the United States for the year ending July 30, 1867, amounted in value to three hundred and thirty-five million dollars in gold. About seven-tenths of these exports consisted of Southern products. Of course, the North produces much the greater portion of the wealth of the country. But cotton and tobacco find a large market abroad, while grain, corn, hay and manufactures are chiefly consumed on our own soil.

POWER OF THE VOICE.—The human voice, when its utterances are clearly articulated, and it is supplied from good lungs, will fill 400,000 cubic feet of air, provided they be enclosed in a proper manner, and the voice placed and directed advantageously.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., DECEMBER 21, 1867.

ENLARGEMENT OF THE RURAL.—Our readers will find an interesting letter on the second page from the Editor-in-Chief, concerning the enlargement and other novel and valuable features which will be added to the coming volume of the RURAL.

NEWS OF THE WEEK.

New York State Items.

THE Constitutional Convention has spent considerable time in debating the question of removal on the first of January. The use of the Seventh Regiment Armory in New York city has been tendered it. A proposition by Mr. Church, to adjourn until May next, and await any action the Legislature may take in the meantime respecting the continuance of the work, may possibly be assented to.

An altercation between several negro minstrels took place in New York city, a few days since, which resulted in the death, by shooting, of Thomas Sharpley, and the severe wounding of a man named Kelly.

Mrs. Catharine McFall, a widow, and her daughter Jennie, were discovered in their room at No. 307, Atlantic st., Brooklyn, on the 9th inst., dead in each other's arms. Poison did the work, administered, it is supposed, by the mother.

A snow storm commenced in New York city on the 11th inst., and continued throughout the next day, until the streets were blocked by nearly two feet of snow. The storm was general, but less severe, over the State.

The plans for a new Capitol, as prepared by Fuller and Gilman, under the supervision of the Capitol Commissioners, were approved by Governor Fenton recently, and the work of excavation for the building is now progressing at Albany.

A bold robbery was committed in New York on the 13th. The clearing house clerk of the N. Y. State Bank was seized by three men at the corner of Wall and William streets, and thrown into a sleigh with his satchel, which contained $3,000,000 in checks and $500. The clerk was severely beaten before he would release his hold of the satchel. He was then thrown out into the snow.

About 800 loaded boats are ice-bound in the Erie Canal between Syracuse and Troy.

Kurtzeman & Sons' piano factory, at Buffalo, was burned on the 15th inst. Loss thirty thousand dollars.

From Washington.

THE House has passed for the second time the bill to strike out the word "white" from the laws of this District, regulating the election of jurors, leaving colored tax-payers equally eligible with whites. This bill passed both Houses in July, but was subjected to a pocket veto by the President.

A bill to provide additional bounties, giving bounties to families of deceased soldiers entitled to them, has passed the Senate.

The Director of the Bureau of Statistics reports that the domestic exports of the United States for the quarter ending Oct. 1st, were in value over ninety million dollars, while for the corresponding period in 1866 they were seventy-eight millions.

The National Convention of those interested in the manufacture and sale of spirits was held on the evening of the 10th inst., at Willard's Hotel.

POSTMASTER-GENERAL'S REPORT.—Want of room prevented our giving abstracts of all the Departmental Reports last week. The Postmaster-General submits an exceedingly gratifying report of the condition of the postal service. For the year ending June 30, 1867, the receipts in this department were $19,978,693. The total expenditures were $19,235,285, leaving a balance of $743,210 in favor of the department. During the year 1867 the increased postal revenue, independent of specific appropriations, over that of 1866, amounted to $850,040, while the increased revenue for sale of stamps and stamped envelopes, was $783,404. In alluding to the constantly increasing facilities offered by the postal department, the report states that during the year 1867, new postal conventions have been exchanged and certified with the United Kingdom of Great Britain and Ireland, Belgium, Italy, Switzerland, Netherlands, North German Union and Colonial Government at Hong Kong, to and from and within which countries the rates of ocean and land postage have been greatly reduced.

REPORT OF THE SECRETARY OF THE INTERIOR.—Secretary Browning dwells at length, in his report, on the Indian difficulties; dilates upon the importance of preventing a recurrence of Indian outbreaks, and declares that the construction of the Pacific Railroad, a work of national importance, should not be interrupted by hostile tribes. He desires to see the Indians concentrated at a safe distance from white settlements, and from routes patronized by whites. The number of Indians is stated to be about 300,000. The following figures are given respecting the sale of public lands and other matters of a miscellaneous nature:—Land sold for cash, 75,661,961 acres; located with military warrant, 47,676,000 acres; taken for homesteads, 178,801,349 acres; approved to States as swamp, 106,645,015 acres. Grants to railroads, wagon roads, and canals, 63,316,852 acres; located with college scrip, 24,907,243 acres. Total, 570,411,450 acres. This quantity exceeds that disposed of during the previous year by 2,411,800 acres. The total cost of the Pacific Railroad thus far is given as $21,757,488.79, and the income from the earnings thus far, $35,634,475.

From the South.

GENERAL ORD has issued an order declaring that the Convention has been carried in Mississippi and also in Arkansas; and he orders the Convention to assemble at Jackson and at Little Rock respectively on the 7th of January next.

The Chairman of the Virginia Conservative Convention has appointed W. C. Rives, R. M. T. Hunter, John Janney, James Marshall and J. R. Tucker, a Committee to prepare an address to the people of Virginia and the United States. A Convention of the farmers of Virginia is in session at Richmond.

Nine judicial and ministerial officers have recently been removed in Alabama to give place to loyal Republicans. Five of the new appointees were extreme members of the late Reconstruction Convention.

At a conservative colored meeting in Montgomery the speakers denounced the Reconstruction Convention, and resolutions were adopted which declare, in strong terms, against the ratification of the Constitution.

TERRIBLE RAILROAD DISASTER.—A most fearful catastrophe took place on the 11th inst. at Harlan Bridge, near Northfield, on the line of the Vermont Central Railroad. The bridge was burned a few days before, and a large force of employees had been engaged in building temporary trestle work. Most of them, having dined at the Northfield Hotel, were returning to work in a passenger car backed by an engine. The engineer proceeded with them at a rapid rate and did not check the speed until too late. The car, therefore, with its freight of from seventy to one hundred men, was backed off the abutment into the river below, a distance of sixty feet. The number of casualties is appalling. Fifteen men were killed instantly, and three or four have since died. More than as many others were more or less injured, many seriously, and some, it is feared, fatally.

FROM MEXICO.—Latest news from Mexico state that the Ministry were desirous of resigning, but were retaining their places merely until such time as Congress could be fully organized for business. It was expected that President Juarez would nominate the same Cabinet that accompanied him to Paso Del Norte during the trying time of the intervention. Some anxiety is created by the move depriving the amnestied Imperialists of their seats in Congress after they had been admitted.

LATEST FOREIGN INTELLIGENCE.—A daring attempt was made in London on the 13th inst., to release the recently arrested Fenian Colonel Burke, who is confined in Clerkenwell prison. Powder was placed beneath one of the prison walls, and was exploded, it is supposed, by Burke's confederates. The whole side of the wall was blown into the air. The force of the explosion was so great that three adjoining buildings were destroyed. Many persons were injured, and it is feared that some lives were lost.

EARTHQUAKES IN THE WEST INDIES.—Several of the West India islands have undergone severe earthquakes, of late, and one or two of the smaller ones are reported disappeared. At Havana thirty lives were lost by the shocks, and one steamer sunk. One hundred and fourteen shocks occurred at Porto Rico within eight days. At St. Thomas the people were obliged to give up all efforts to rebuild their habitations or resume business.

NATIONAL CONVENTION.—The Central Committee of the Republican party which was designated by the Nominating Convention of 1864, have appointed a National Convention to be held at Chicago on the 20th of May next for the nomination of candidates for President and Vice-President of the United States.

EXPOSITION UNIVERSELLE.

THE intelligence and judgment of the Imperial Commission, in the matter of awards, are clearly evinced in the following extract from

THE EXPOSITION UNIVERSELLE ILLUSTRATED ("Publication authorized by the Imperial Commission:")

"By their skill, universally recognized, Messrs. WHEELER & WILSON added to HOWE'S system of sewing machines important modifications, which have placed them in the front rank of manufacturers.

The gold medal which has just been awarded them affirms, moreover, that none of the machines from the workshop of Howe, or of the principal tributaries, unite the qualities of simplicity and solidity of mechanism by which these machines are distinguished above all others.

In their machine, remarkable for its form and elegance, they have substituted for the shuttle of Howe a small flat disc, which revolves vertically with unvarying swiftness. Hence this machine is the most simple of all, and notwithstanding its great precision in operation, its price is not above that of the most imperfect systems.

Elegance, perfection of work, simplicity, solidity of mechanism and facility of management, such are the essential qualities united in the WHEELER & WILSON machine, constituting a superiority which the jury has, with unanimity, recognized and proclaimed.

To these gentlemen the gold medal was awarded as manufacturers of machines; to Mr. ELIAS HOWE a similar medal was awarded as propagator. The distinction made by the jury explains itself.

The original machine of THIMONNIER only needed to pass into the skillful hands of WHEELER & WILSON, to receive the highest perfection. To-day, thanks to its cheapness, their machine is accessible to all. Its simplicity assures it not only a place in the chamber of the seamstress, but its elegant form wins its admittance into the most sumptuous parlor."—*Evening Mail.*

☞ THE prospectus of the New York Ledger, the great family paper, will be found in our advertising columns. It is a very readable document.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Dec. 17, 1867.

THERE was a large decline in gold last week. Sales were made at the New York Board yesterday at 134¼. Several causes have contributed to the decline. One is the large payments of gold to be made in January—about $30,000,000. The decision on the impeachment question has also had its effect. Our exports have for some time been very large, and for two months prior to last week shipments of specie were small. Some days ago Sterling Exchange advanced, and in consequence $50,000—mostly in gold bars—were taken out by Saturday's steamer. The total shipment for the week was $1,705,430. The fall in gold was therefore checked a little towards the close of last week.

Money is more abundant in New York, and discounts have been on a more liberal scale, notwithstanding the near approach of the 1st of January, when the Banks make their quarterly returns. On the 15th of this month the interest on the June Seven-Thirties became due, and the December issue of Compound Notes also fell due the same day. On these amounts the currency to be paid out cannot be less than $9,000,000. This large sum will add to the relief already experienced in the general money market.

The further discussion of the various financial schemes before Congress is to be deferred until after the holidays.

The National Manufacturers' Convention, which is to assemble at Cleveland on the 18th inst., it is expected will be largely attended. The subjects of Taxation and Internal Revenue will be the main topics of discussion.

The Erie Canal continues frozen up, and there is no prospect of its opening this season. The large amount of apples and potatoes delayed or spoiled has already had a decided effect on the New York market, and potatoes have advanced 50c. per bbl.

WHEAT AND FLOUR.—There is no material change in prices in our local maket. Prices were firmer in New York last week, in consequence of the sudden closing of the Canal.

The amount of wheat in store and afloat in New York is about 2,000,000 bu. There are some 300,000 bu. on the way from California. This will make but a small supply for the winter.

The exports of wheat from New York for the last two weeks were 490,683 bush.; flour exported in same time, 71,633 bbls.

The following will show the comparative receipts of flour, wheat and corn at the ports of Milwaukee, Chicago, Toledo, Detroit and Cleveland, from Jan. 1 to Dec. 7, for 1866 and 1867:

	1867.	1866.
Flour, bbls.	3,579,043	3,890,703
Wheat, bush.	28,871,213	27,447,559
Corn, bush.	30,722,185	37,819,291

WOOL.—There is a decided, and for holders of large stocks, a gratifying improvement in the wool market. The long expected activity or reaction seems to have commenced. This activity and increase of prices was manifest last week in all the distributing markets on the sea board. The sales at Boston were unusually large for the season, and at improved figures. Sales of domestic for the week foot up 1,275,000 lbs., at a range, for fleece, of 57@62c.; pulled sold at 35@45½c.

DRESSED HOGS.—Buyers in this city pay $8,00@9,00. The weather for some days has been very favorable for the pork business, and transactions at the West are very large.

We are compelled to leave out our usual table of local quotations this week. No material change from last week is noted, except in flour, which has advanced 50c. per bbl.; and pork, which is quoted $2,00@2,50 higher.

The Provision Markets.

New York, Dec. 14.—Ashes, pots, $8,25@8,50; pearls, $12,00@12,50. Cotton, 35@35½c. Flour, sales at $8,55@10,00. Wheat, $2,38@3,05. Rye, $1,65@1,75. Barley, $1,55@1,60. Corn, $1,38@1,42. Oats, 85@86c. Pork, new mess, $21,25@21,37; old do. $00,00@00,00; prime, $18,00@18,25. Beef, new plain mess, $13,00@18,00; new extra mess, $18,50@21,00; beef hams, $30,00@32,00. Pork hams, 12@13¼ cents. Shoulders, 8@9½ cents. Lard, 12½@13¼cts. Butter, 30@36c. Cheese, 11@15c. Hops, 20@35c. Dressed hogs, 9¾@11c.

Chicago, Dec. 14.—Flour, $8,50@9,50; Wheat, $1,75@1,88; Corn, 81¾@81¾c; Oats, 55@55½c; Rye, $1,50@1,51; Barley, $1,61@1,65. Pork, mess, $16,50@21,25; Lard, 11@12c; Butter, 25@30c; Cheese, 15@18c.

The Cattle Markets.

New York, Dec. 9.—The current prices for the week at all the markets are as follows:—Beef Cattle, $8@17,00; Cows and Calves, $55@130; Veal Calves, 9½@12c.; Sheep and Lambs, $3,75@5,50; Swine—Corn-fed, 6½@6¾c; light and medium, 6½@6¾c.

Albany, Dec. 11.—Beeves, prices ranging from 3@9¾c. Milch Cows, $30@90. Sheep, common to good, 4½@7c; Hogs, 6@8¼c.

Chicago, Dec. 14—Beeves range at from $5,25@7,75; Hogs, live, $5,50@7,25; dressed, $7,25@7,50.

The Wool Markets.

NEW YORK, Dec. 14—Wool, market is a shade firmer and in good demand. Sales 420,000 lbs. at 47@55c. for domestic fleece; 30@36c for pulled; 18@26c for Texas; and 17@29c for California.

Cincinnati, Dec. 12—The Gazette gives the following quotations:—Tub-washed, 37@38c.; very clean toll wool, 38@40c, and unwashed do, 22@23c; pulled, 33@35c; Fleece—Common to ¼ blood, 33@35c; ¼ to ½ do, 35@37c; ½ to ¾ do, 38@40c; ¾ to full do. 40@42c ₰ lb.

JEDDO BERRY BOX CO.—(Successors TO WARREN & RIX.)—The undersigned take this opportunity to inform the public that they have purchased the entire interest of WARREN & RIX, formerly Berry Box manufacturers, of this place, and that they have greatly added to their facilities for the manufacture of all kinds of small fruit boxes. We are now fully prepared to furnish the material in any quantity, and at prices lower than can be furnished by any other firm. These boxes are the most popular in use, and are on the increase every year. We make any size box asked for (holding a quart or less,) at the same price as our regular sizes. Four specimens sent gratis on application, by express, charges being paid, or 100 (assorted) for $1,00. Prices range from $7,50 to $10,00 ₱ M.; 10 ₱ cent discount when parties order 10,000 or more. We furnish tacks in all cases. Now is the time to order, so as to make them up during the long winter evenings. Terms cash. Address JEDDO BERRY BOX CO., Jeddo, Orleans Co., N. Y.

PROSPECTUS FOR 1868
OF
THE NEW YORK LEDGER.

THE GREAT FAMILY PAPER.—*All the Greatest Writers Write for It.*—The reason that the NEW YORK LEDGER has the largest circulation is, that it is the BEST PAPER. Why should it not have the largest circulation? More labor, more talent, more money, are bestowed upon it than upon any other paper. Its moral tone is always pure and elevated. The leading Clergymen of the United States, the Presidents of the principal Colleges, the greatest Poets, Wits and Statesmen of the country, are among the contributors to its columns. The reader always gets more than his money's worth in the LEDGER. We have always had the BEST WRITERS, and always shall have them, cost what it may. Whatever we have promised in our advertisements heretofore, our readers will bear us witness that we have always performed; and not only that, but a great deal more. For instance, in our last Prospectus we announced a story by H. WARD BEECHER, which we gave; but we did not announce HORACE GREELEY'S AUTOBIOGRAPHY, which we are now publishing; nor did we announce the series of Articles entitled ADVICE TO YOUNG MEN, by the Twelve College Presidents. The rule on which the LEDGER is conducted is to get the best of everything, whether it has been promised or not. The public recognize this fact; and it is from their desire to obtain the very best paper that they give the LEDGER the preference; hence its unparalleled and unapproached circulation, being over three hundred thousand copies.

Now for the new year: All our present corps of popular authors will continue to write for the LEDGER; we shall begin the new year with a new story by Mrs. SOUTHWORTH; the Hon. HORACE GREELEY will continue his Autobiography; FANNY FERN her sparkling Sketches; JOHN G. SAXE his humorous Poems; SYLVANUS COBB, Jr., his entertaining Stories; HENRY WARD BEECHER his original Papers; JAMES PARTON his instructive Biographical Sketches; MISS DUPUY her Dramatic Narratives; MARY KYLE DALLAS, AMY RANDOLPH, CAROLINE CONRAD, MRS. VAUGHAN, their delightful Short Stories; WILLIAM CULLEN BRYANT, ALICE CARY, DR. CHAS. D. GARDETTE, GEO. D. PRENTICE, NATHAN D. URNER, EMMA ALICE BROWNE, MRS. SCHULTZ, WM. ROSS WALLACE, their Poems.

A NEW FEATURE OF THE LEDGER.—*Advice to Young Women.*—A new feature of the LEDGER. In the beginning of the year, will be a series of Twelve Articles, written expressly for Young Ladies, by Twelve of the most Distinguished Women of the United States, including Mrs. HORACE MANN, Mrs. LYDIA MARIA CHILD, Mrs. General BANKS, Mrs. HORACE GREELEY, and Madame DE VERT.

OUR TERMS FOR 1868.—*Now is the Time to Subscribe.*—Single copies, $3 per annum; four copies, $10, which is $2,50 a copy; eight copies, $20. The party who sends us $20 for a club of eight copies (all sent at one time) will be entitled to a copy *free.* Postmasters and others who get up clubs in their respective towns can afterwards add single copies at $2,50. No subscriptions taken for a less period than one year. Canada subscribers must send twenty cents in addition to the subscription, to pay the American postage. When a draft or money-order can conveniently be sent, it will be preferred, as it will prevent the possibility of the loss of money by mail. The postage on the LEDGER to all parts of the country is only twenty cents a year, or five cents a quarter, payable at the office where the paper is delivered.

☞ We employ no traveling agents. Address all communications to

ROBERT BONNER, Publisher,
No. 90 Beekman St., New York.

JAMES VICK,
IMPORTER AND GROWER OF

934-4t E. L. GODKIN & CO., New York.

WILBOR'S COD LIVER OIL AND LIME.—The friends of persons who have been restored from confirmed Consumption by the use of this original preparation, and the grateful parties themselves, have by recommending it and acknowledging its wonderful efficacy, given to the article a vast popularity in New England. The Cod Liver Oil is in this combination robbed of its unpleasant taste, and is rendered doubly effective in being coupled with the Lime, which is itself a restorative principle, supplying nature with just the agent and assistance required to heal and reform the diseased lungs.
A. B. WILBOR, No. 100 Court Street, Boston, is the proprietor. Sold in New York by DEMAS BARNES & CO., F. C. WELLS & CO., and by Druggists generally.

$225 A MONTH!—Fifteen New Articles for Agents. Address H. B. SHAW, Alfred, Me.

525 MILES OF THE UNION PACIFIC RAILROAD,
Running West from Omaha
ACROSS THE CONTINENT,
ARE NOW COMPLETED.

This brings the line to the eastern base of the Rocky Mountains, and it is expected that the track will be laid thirty miles further, to Evans Pass, the highest point on the road, by January. The maximum grade from the foot of the mountains to the summit is but eighty feet to the mile, while that of many eastern roads is over one hundred. Work in the rock-cuttings on the western slope will continue through the winter, and there is now no reason to doubt that the entire grand line to the Pacific will be open for business in 1870.

The means provided for the construction of this Great National Work are ample. The United States grants its Six Per Cent. Bonds at the rate of from $16,000 to $48,000 per mile, for which it takes a second lien as security, and receives payment to a large if not to the full extent of its claim in services. These Bonds are issued as each 20 mile section is finished, and after it has been examined by United States Commissioners and pronounced to be in all respects a first-class road, thoroughly supplied with depots, repair-shops, stations, and all the necessary rolling stock and other equipments.

The United States also makes a donation of 12,800 acres of land to the mile, which will be a source of large revenue to the Company. Much of this land in the Platte Valley is among the most fertile in the world, and other large portions are covered with heavy pine forests and abound in coal of the best quality.

The Company is also authorized to issue its own First Mortgage Bonds to an amount equal to the issue of the Government and no more. Hon. E. D. Morgan and Hon. Oakes Ames are Trustees for the Bondholders, and deliver the Bonds to the Company only as the work progresses, so that they always represent an actual and productive value.

The authorized capital of the Company is One Hundred Million Dollars, of which over five millions have been paid in upon the work already done.

EARNINGS OF THE COMPANY.

At present, the profits of the Company are derived only from its local traffic, but this is already much more than sufficient to pay the interest on all the Bonds the Company can issue, if not another mile were built. It is not doubted that when the road is completed the through traffic of the only line connecting the Atlantic and Pacific States will be large beyond precedent, and, as there will be no competition, it can always be done at profitable rates.

It will be noticed that the Union Pacific Railroad is, in fact, a GOVERNMENT WORK, built under the supervision of Government officers, and to a large extent with Government money, and that its bonds are issued under Government direction. It is believed that no similar security is so carefully guarded, and certainly no other is based upon a larger or more valuable property. As the Company's

FIRST MORTGAGE BONDS

are offered for the present at **90 CENTS ON THE DOLLAR**, they are the cheapest security in the market, being more than 15 per cent. lower than U. S. Stocks. They pay

SIX PER CENT. in GOLD,

or over NINE PER CENT. upon the investment. Subscriptions will be received in Rochester by the FIRST NATIONAL BANK, and in New York at the Company's Office, No. 20 Nassau street, and by

CONTINENTAL NATIONAL BANK, No. 7 Nassau St.,
CLARK, DODGE & CO., BANKERS, 51 Wall St.,
JOHN J. CISCO & SON, BANKERS, No. 33 Wall St.,

and by the Company's advertised Agents throughout the United States. Remittances should be made in drafts or other funds par in New York, and the bonds will be sent free of charge by return express.

A NEW PAMPHLET AND MAP, showing the Progress of the Work, Resources for Construction, and Value of Bonds, may be obtained at the Company's Offices or of its advertised Agents, or will be sent free on application. 931-4t

JOHN J. CISCO, Treasurer,
November 23, 1867. NEW YORK.

NEW YORK TRIBUNE.
The Largest and Cheapest.

Now is the time to Subscribe for

THE GREAT FAMILY NEWSPAPER,

THE

New-York Weekly Tribune

is printed on a large double-medium sheet, making eight pages of six broad columns each. It contains all the important Editorials published in THE DAILY TRIBUNE, except those of merely local interest; also, Literary and Scientific Intelligence; Reviews of the most interesting and important New Books; the Letters from our large corps of correspondents; the latest news received by Telegraph from Washington and all other parts of the country; a Summary of all important intelligence in this city and elsewhere; a Synopsis of the proceedings of Congress and State Legislature when in session; the Foreign News received by every steamer; Exclusive Reports of the proceedings of the Farmers' Club of the American Institute; Talks about Fruit, and other Horticultural and Agricultural information essential to country residents; Stock, Financial, Cattle, Dry Goods and General Market Reports; making it, both for variety and completeness, altogether the most valuable, interesting and instructive WEEKLY NEWSPAPER published in the world.

The Full Reports of the American Institute Farmers' Club, and the various Agricultural Reports, in each number, are richly worth a year's subscription.

THE NEW YORK WEEKLY,
(THE GREATEST STORY AND SKETCH PAPER IN THE UNITED STATES.)

NOW IS THE TIME TO SUBSCRIBE!

A New Story Is Commenced in No. 6 of the New York Weekly, Now Ready, by the great American Author,

EMERSON BENNETT,

ENTITLED

SOL SLOCUM;

OR,

THE MAID OF THE JUNIATA!

The NEW YORK WEEKLY now has a circulation of *125,000 COPIES!*

SOL SLOCUM:

OR,

THE MAID OF THE JUNIATA!

From the pen of America's gifted romancer,
EMERSON BENNETT,
commenced in the
NEW YORK WEEKLY,
No. 6—NOW READY!

SOL SLOCUM;

OR,

The Maid of the Juniata,

BY
EMERSON BENNETT,

is the greatest product of his transcendantly great pen. It is a tale of the great border, and the characters which figure in it are as various as the many scenes through which they have to pass. One after another are introduced the hardy pioneer, the cunning trapper, the wily savage, the eccentric seeker after adventure, the tender maiden, severed by the force of circumstances from friends and kindred, the heroic and daring youth whose aspirations are lofty, whose soul is fearless, and whose deeds are daring, together with a miscellaneous crowd of adventurous spirits presenting almost every phase of human character, each of whom plays his or her part in the thrilling drama. The story is replete with scenes and incidents which cause the blood of the reader to leap with electric force, and constantly alternating between joy and sorrow, tears and laughter, indignation and admiration, he suffers and rejoices with the characters, absolutely seeming to act with them, so intensely is he interested—so deeply is he spell-bound. The story never flags from the beginning to the end, and the love portions of it are especially beautiful, and such as to enlist the sympathy of every lady reader. This great story is commenced in No. 6 of the present volume, and those who desire to read it should send in their orders. Once more we say, buy the

NEW YORK WEEKLY,

and read

SOL SLOCUM,

BY
EMERSON BENNETT.

Among the romance writers of the NEW YORK WEEKLY may be mentioned

MRS MARY J. HOLMES, MRS LEON LEWIS, MARY KYLE DALLAS, MRS. CATHARINE A. WARFIELD, MARGARET BLOUNT, MRS. ANN S. STEPHENS, ALMEIDA M. BROWN, HELEN FOREST GRAVES, HELEN CORWIN FISHER, EDMUND KIRKE, LEON LEWIS, WM. HENRY PECK, ALFRED B STREET, EDWARD S ELLIS, EMERSON BENNETT, P. HAMILTON MYERS, EDWARD MINTURN JAMES REYNOLDS, FRANCIS S. SMITH, and many others, to say nothing of those great stars in the Literary firmament, A. J. H. DUGANNE, WILLIAM ROSS WALLACE, EMMA ALICE BROWN, M. EDESSA WYNNE, MRS. SARAH A. WATSON, and a host of others, and that trio of brilliant humorists, Q. K. PHILANDER DOESTICKS, JOSH BILLINGS, and MARK TWAIN, and many others. Besides a host of BRILLIANT ESSAYISTS, SPICY PARAGRAPHISTS, PAINSTAKING COLLATERS, and about one hundred other occasional contributors.

SPECIMEN COPIES SENT FREE.

OUR TERMS.

THE NEW YORK WEEKLY is sold by every News Agent in the United States. The price is SIX CENTS, but in cases where Agents have to pay extra freight, a higher price is charged. When there is a News Agent in the town, we desire our friends to get the NEW YORK WEEKLY through him. When sent by mail, single copies, $3 per annum; four copies, $10, which is $2,50 a copy; eight copies, $20. The party who sends us $20 for a club of eight copies, (all sent at one time,) will be entitled to a copy *free*. Postmasters and others who get up clubs, in their respective towns, can afterward add single copies at $2,50.

The NEW YORK WEEKLY and the ILLUSTRATED LITERARY ALBUM will both be sent for $6 per annum.

Address STREET & SMITH,
11 Frankfort Street, New York.

TURNER'S TIC DOULOUREUX, OR Universal Neuralgia PILL.

A SAFE, CERTAIN, AND Speedy Cure FOR NEURALGIA, AND ALL NERVOUS DISEASES.

Its Effects are Magical.

It is an *unfailing remedy* in all cases of Neuralgia Facialis, often effecting a perfect cure in less than twenty-four hours, from the use of no more than *two or three pills.*

No other form of Neuralgia or Nervous Disease has failed to yield to this *wonderful remedial agent.*

Even in the severest cases of Chronic Neuralgia and general nervous derangements,—of many years standing,—affecting the entire system, its use for a few days, or a few weeks at the utmost, always affords the most astonishing relief, and very rarely fails to produce a complete and permanent cure.

It contains no drugs or other materials in the slightest degree injurious, even to the most delicate system, and can *always* be used with *perfect safety.*

It has long been in constant use by many of our *most eminent physicians*, who give it their unanimous and unqualified approval.

Sent by mail on receipt of price, and postage.

W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* **Licenses Granted.**

PLASTIC SLATE FOR ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

BELLS BUCKEYE Bell Foundry, Established 1837.—VANDUZEN & TIFT 102 & 104 East 2d St., Cincinnati, O., manufacturers of BELLS for Churches, Academies, Plantations, etc., made of the Genuine Bell Metal, and mounted with our Patent Improved Rotary Hangings. All Bells warranted in quality and tone.
☞ Catalogue and Price List sent on application.

THE MOUNTAIN BROOK.

BY GILBERT LYON.

'Tis laughing down its rocky bed
The evergeens among.—
This mountain brook of pleasant look
And aspect always young.

It madly leaps each rugged cliff
And stops below to rest—
Then soft and slow all peaceful flow
The ripples o'er its breast.

I sit upon the mossy bank
And list its music grand,
For, all along, it sings a song,
I always understand.

Sometimes it sings of joy and hope—
A pleasant, lively strain;
But sighing soft, it tells me oft
Of sorrow and of pain.

Sometimes it sings of other days,
And brings to mind each dream
That, when a child, in fancy wild,
Came o'er me, by the stream.

And, though I know those dreams are vain,
Those dreams I cherish still;
And, sad or gay, I love the lay—
The music of the rill.

The Story Teller.

Written for Moore's Rural New-Yorker.

LINKING TWO CHRISTMAS-TIMES.

BY A. A. HOPKINS.

CHAPTER I.

THE earliest recollection that haunted the memory of AGNES LIVERMORE was of a Christmas spent at Ingleside Farm, when she was four years old. It and its gladness had been fastened upon her mind, somehow, and were the first circumstances in life which she definitely remembered. Certain other things there were that must have come in contact with her living at a time earlier, by perhaps a few weeks, than that, which seemed to have a vague and shadowy existence in her mind; but she never could really go beyond that Christmas-time in her backward looking. It is well if our first memory be not one of sorrow or unpleasantness. We cannot bury, wholly, the years that are gone by, and whatever impressed us most in our childhood will linger with us longest, and be most frequently recalled.

There was nothing sad or unpleasant in the memory of that holiday. It was just a glad flash of sunlight across AGNES' girlhood, and remembered ever because it was so bright. Ingleside Farm numbered a happy group of inmates; and the usual number of guests gathered there, beside, were merry-hearted and carefree. Young and old were there, consequently the little AGNES was not without companions, who helped to make the hours of holiday-week pass rapidly. The games that were played, the merry makings that were indulged in, and the genuine glee that abounded, were her first inflowings of life. First, at least it seemed to her, as she now thought of them. With each recurring twelve-month since, they had been repeated. As girlhood developed into womanhood the character of the annual amusements had changed somewhat, but they were not the less hearty for being a little more staid.

And now she was going to Ingleside again. The cheery holiday-time was near at hand, and the old family mansion awaited its usual influx of guests. The gladness and merriment it had known were something to think of. During three generations the yule days had brought their festivities and mirth—had been assembled under its roof the various branches of the LIVERMORE family—had there filled the days with pleasure that died not out of many hearts until came its renewal. A round dozen Christmas-times, with one to spare, had AGNES counted there, each one of which had been marked by some little happiness peculiar to itself. Of them all, the last had brought to her most—had been filled with delight the most supreme. In the first were her first real inflowings of life, as she remembered them; but in the last was the fullness of something sweeter than life—love, and love returned.

It was little wonder, then, that AGNES LIVERMORE, in the flush of her seventeen years, and with her heart attuned wholly to the witching music of love, felt a thrill of intensest pleasure as she anticipated the joyousness so soon to be hers. For at Ingleside, where they had met year after year, and where, at the last bright meeting, he had gladdened her life by the same sweet story that has gladdened many another's, she was to meet HOWARD LANDOR. If she fancied the Christmas-time would possess a new holiness, it was because in every young and pure heart love is a holy revelation that tinges everything around it with its own charms. If her faith in the gladness that time should bring was more implicit than formerly, it was for the reason that love deepens the trust in all things, and throws a halo of undoubtingness over the future.

Were I an artist, desiring to paint womanhood in all its perfection of loveliness, I would choose for my subject one in the freshness of love's young dream. There may be most complete beauty of form and feature, but until the heart has warmed to the awakening of love, something is wanting. And homeliness may be so transfigured by love as to be lost sight of,—may, indeed, approximate to beauty.

HOWARD LANDOR, thinking of the holidays approaching, experienced little of the joy so peculiar to love's young anticipations. Something had been whispered to him which threw a shadow over his trust, and made him doubtful of the good to come. I never knew what it was, exactly. It may have been merely an idle word, spoken with no thought of harm. Certain am I that it was no true word. AGNES was guileless and undeceiving; he had no reason to mistrust her faithfulness, however much he may have fancied he had. But there was mistrust in his heart, nevertheless. Throughout the autumn, as the golden glory deepened in the forests, this mistrust had deepened in his heart. As he had not met her whom he doubted, meanwhile, and as they had entered into no correspondence, no opportunity had been afforded for proving the correctness of his suspicion.

He looked forward to Christmas to decide his doubts. With the ready faith in self of twenty-one years, he relied upon his ability to judge woman's heart. He would meet her again, and would read her truth or faithlessness for himself. She could not deceive him. And if she really were not true—what then? He did not like to think upon this contingency. Though his distrust was considerable, his hope—half hope, half belief—that everything would be satisfactorily explained, was stronger than that, even stronger than he knew. For hope is, oftener than one would suspect, partially blind. Perhaps frequently it will not see when it might; more frequently it cannot see when it would. So he hoped on, believed on, and doubted on, until the day came that was to be most fruitful to him of—what?

CHAPTER II.

AGNES arrived at Ingleside in time to enjoy Christmas-Eve with those already assembled there. And a merry season they all had of it. A half-dozen uncles and aunts, together with a troop of cousins and friends, made up the party. HOWARD was to come next day.

AGNES was gay as the gayest, and entered into all the sports of the evening with even more than her wonted zest. It was to be such a glad to-morrow, surely she must be happy to-day! So she thought, so think many of us whose glad to-morrows are full of moanings, instead of the joy we looked for!

When the morning came, and she looked through the crystalline air out upon the white-spread lawn and down the winding road in front, where everything was so still and Sabbath-like, it seemed to her like a holy day indeed. She fancied, then, that the year would be incomplete without its Christmas, just as the week would be incomplete without its Sabbath. There are a few days, set here and there in the year's casket, which are not as common days. They are quiet resting places, where we stop and look back upon the way passed over, and in which we gather strength for the distance yet before us. Perhaps AGNES hardly realized just this, yet a vague impression that there was something unusual in the very atmosphere, existed in her mind. Still, though for the moment sober-hearted, she was not sad. She would have trilled the merriest carol rather than a *Te Deum Laudamus;* meanwhile in her song, however bird-like, a tone of praise would have blended.

HOWARD LANDOR'S home was distant barely two miles from Ingleside, and HOWARD rode over to partake of the Christmas dinner with the LIVERMORES. He and AGNES met before dinner was served, but only in the presence of others. It was not until the afternoon faded into twilight that he found opportunity to draw her arm through his, and led her away to a dim alcove.

There, in his purpose to read her heart, he blundered, as have many wiser than he, and read what was not written therein. The heart of seventeen years is but a strange little organ, at best, and his wisdom must needs be almost intuitive who can always fathom it.

"I told you the story of my love a year ago to-night," he said. "Six months later another told you his; which was the sweeter?"

He could not keep all shade of bitterness out of his voice, although he smiled as he spoke; and his words implied a doubt.

"All stories are sweet when the heart loves to hear them," she made answer, with a little of pique in her manner; "and why should I say which may be sweetest?"

He should have seen further into her real feelings, and in his study should have been more careful than to say, as he quickly did,—

"It is as I thought, then, the love you yielded twelve months since is mine no longer." And he dropped the hand he held as he added, "I hoped to find you more true. Pardon me for misjudging you."

The last sentence was uttered scornfully, but regretted as soon as spoken. He might have sought to modify it somewhat, had time been given him, but AGNES turned coldly away as she haughtily replied:

"You are welcome to your opinion."

This was their parting. True, they mingled in the same festivities throughout the evening, and met on two or three occasions afterward, during holiday week, but were further apart than strangers, nevertheless. She had deceived him, but not as he thought; and her pride bade her keep a cheerful face and a laughing eye in his presence. These he imputed to her love for another, and therefore would seek no explanation.

HOWARD'S father was senior partner in a house doing a heavy Indian trade, through a branch in Calcutta, and it had been arranged that HOWARD should go out and manage affairs there for a couple of years. The first week in the new year found him upon his voyage thither. He cared less for leaving than he might have cared, but for the thought—we are as far apart now as we shall be when the ocean rolls between us. For with him love was happiness, home and friends, in a sense few will completely realize; and to lose it was to lose nearly all. But he would not break his heart over it. He would probably become a good business man, and lose sentiment in practicalities. His was not puling sentimentalism—something to breed misanthropy and suicidal notions—but a healthy emotion, which might be long felt but without real detriment to life.

Arrived in Calcutta, at length, his new surroundings filled the present with so much of novelty that the past slid away imperceptibly into dim distance. Life was so unlike that of former years that they seemed unreal and shadowy. He did not forget; very often, indeed, he remembered the old pleasure and the old pain, but both were dream-like, for the most part, and had only a vague existence in memory. Now and then, however—but the intervals grew rarer as the months increased—that last Christmas came back with the keen vividness of a full and perfect resurrection; he saw a lovely and loved form as he saw it when they parted; heard a sweet, rich voice as he heard it then; and realized deeply the bitterness of a love that died not, but which brought not its reward.

He came, finally, to feel at home under the tropic sun, and to entertain no anxiety about returning. He took his mid-day siesta with the careless indifference of a native; run up country, occasionally, when the heat was too oppressive; grew lazy and yellow; and looked as little like a disappointed lover as it is possible to imagine. And when the two years he at first proposed remaining, had gone by, his father retired from the business in his favor, and his return was indefinitely postponed. Indian life agreed with him, he fancied, and though it was not just what he once had pictured for the future, he really could not determine what he should do with himself back among former scenes.

So the years glided by. About the close of the fifth, one of his home correspondents—his college chum, the only person outside his own family with whom he had kept up even a spasmodic correspondence—incidentally mentioned the death of AGNES LIVERMORE. The ashes of HOWARD'S dead love warmed afresh, as he read the brief paragraph, but only to a faint, dull flicker; there was nothing of hope to feed a bright and vivid glow.—[Continued on page 409, this number.

A SURPRISING REVELATION.

MASTER ADOLPHUS, overhearing his Mother and Sister JULIA discussing the question as to the probability of Mr. OLDBUCK'S wearing a Wig, takes the first occasion to settle the matter conclusively. It happens to be a most critical and decisive moment for Mr. O.; for he is still a Bachelor.

ANSWERS TO ENIGMAS, &c., IN No. 933.

Answer to Miscellaneous Enigma:—Henry Wordsworth Longfellow.

Answer to Anagram:

The fate of nations, like a mighty sea,
Is full of hidden whirlpools, rocks and graves;
And he is blind that in their destiny
Sees but the conflict of the wind and waves.

To Miss H. A. FRENCH, Bath, N. Y., is awarded the prize for the first correct answer to Illustrated Prize Rebus in No. 932 of the RURAL. It is as follows:

This world is full of beauty,
As are the worlds above.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,79 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

Premium List, Show-Bill, &c.—Our Premiums to Club Agents are more liberal than ever before, but we have not space to give a list of them in the RURAL. Premium Lists, Show-Bills, Specimens, &c., are promptly sent, free, to all applicants. Give us your address, and also that of any friends who may be disposed to form clubs, that you and they may see our offers of "Good Pay for Doing Good."

THE WEED SEWING MACHINE CO.
OF HARTFORD, CONN.,

TWENTY-FIFTH THOUSAND.
THE TEMPLE CHOIR, a new collection of Tunes, Anthems, Glees, Elementary Exercises and Social Songs, for the Choir, Singing School and Social Circle, by THEODORE F. SEWARD, assisted by Dr. LOWELL MASON and WILLIAM B. BRADBURY, first published only a few weeks since, has already reached its twenty-fifth thousand, and proves THE MOST POPULAR WORK OF ITS CLASS PUBLISHED IN THIS COUNTRY FOR MANY YEARS. It is the first book in which Dr. Mason and Mr. Bradbury have been associated as editors, and beside their own recent compositions and arrangements, probably represents a greater number of other popular composers than any other work. It is a thoroughly pleasing and useful book, which every one likes. Price $1,50 each; $13,50 per dozen. A single copy (only) to any teacher of music or leader of choir, post-paid, for examination, for one dollar. Published by
MASON BROTHERS, 596 Broadway, New York.
MASON & HAMLIN, 154 Tremont St, Boston.

SECURE PROFITABLE INVESTMENT.
THE
Central Pacific Railroad,
First Mortgage Thirty Year, Six per Cent. Coupon Bonds,
PRINCIPAL AND INTEREST PAYABLE IN GOLD COIN,

Represent the preferred claim upon one of the MOST IMPORTANT LINES OF COMMUNICATION IN THE WORLD, as it is the sole link between the Pacific Coast and the Great Interior Basin, over which the immense Overland travel must pass, and the

Main Trunk Line Across the Continent.

The Road is now nearly completed from Sacramento to the Richest Mining Regions in the Salt Lake Basin, and is being rapidly carried forward by the largest force of laborers ever employed by any Railroad Company on this continent.

The natural, legitimate, commercial business of the Road surpasses all previous expectation, and is profitable beyond parallel, even among the oldest roads in existence. The Earnings and Expenses for the Quarter ending Oct. 31, were as follows, IN GOLD:

GROSS EARNINGS,	OPERATING EXPENSES,	NET EARNINGS,
$593,847.92	$102,088.61	$491,759.31

This result, however, would have been far greater but for the inability of wagon teams to forward the freight and passengers from the temporary terminus in the mountains.

The United States Government and the State and Cities of California have so aided and fostered the Great Enterprise, that the Company will assume very light annual Interest obligations, and will have the following ample Resources at command for the Construction:

DONATIONS in Lands, Bonds, Concessions, etc., (without lien)	$12,800,000
CAPITAL STOCK, Net Earnings, etc., (no lien)	11,000,000
LOANS (subordinate lien)	3,000,000
U. S. SUBSIDY BONDS, 726 miles (subordinate lien)	25,517,000
FIRST MORTGAGE BONDS	25,517,000
Resources, first 726 miles	$77,834,000

The FIRST MORTGAGE BONDS are in sums of $1,000 each, with semi-annual gold coupons attached, and are offered for sale, for the present, at 95 per cent. and accrued interest from July 1st, in currency, at which rate they yield nearly

Nine per Cent. upon the Investment.

These Bonds, authorized by the Pacific Railroad Acts of Congress, are issued only as the work progresses, and to the same extent only as the Bonds granted by the Government, and are the prior lien upon the whole valuable property furnished by the above Resources. They possess special assurances and advantages over other Corporate Securities, and are destined to rank among THE BEST INVESTMENTS IN THE WORLD, from their unusual attractions of safety, soundness and profit.

Conversions of Government Securities
INTO
CENTRAL PACIFIC FIRST MORTGAGE BONDS
now realize for the holders from TWELVE TO EIGHTEEN PER CENT. ADVANTAGE, with the same rate of interest.

Bonds can be obtained through the subscribers directly, or through responsible Banking agencies.

Descriptive Pamphlets, Maps and information can be had at the

Office of the C. P. R. R. Co., No. 54 William St., N. Y., and of

FISK & HATCH,

Bankers & Dealers in Gov't Securities,

AND FINANCIAL AGENTS OF THE C. P. R. R. CO., NO. 5 NASSAU ST., N. Y.

And of FARMERS' & MECHANICS' NATIONAL BANK and FIRST NATIONAL BANK, Rochester, N. Y.

A PORTRAIT OF MR. GREELEY.
The Publishers of the New York Tribune having received many inquiries from time to time for a good likeness of the editor, have made an arrangement with Messrs. Derby & Miller to furnish copies of Ritchie's engraving, from a photograph by Brady, which will be sent to such subscribers to THE TRIBUNE as wish it on the conditions below. This is much the best likeness of Mr. Greeley that has been engraved. The print sells for $1. Each subscriber who sends us $10 for the Daily, $3 for the Semi-Weekly, or $2 for the Weekly Tribune, the paper to be sent by mail, and who requests the engraving, *at the time of subscribing*, will have a copy carefully mailed, post-paid, to his address. One will likewise be sent to any person who forwards a club of ten or more Semi-Weeklies or twenty or more Weeklies, at our club rates, and asks for the portrait at the time of remitting. We do not propose this as a premium, but to gratify the many friends of The Tribune, who desire to possess a good likeness of its founder. See advertisement elsewhere in this paper for club terms. 934-1mo

CHILDREN.—ALL PARENTS SHOULD understand that children's shoes, with metal tips, will wear at least three times as long as those without. The new Silver Tip is decidedly ornamental, and is being extensively used on children's first-class shoes. Sold everywhere. 931-4t

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

THE RURAL TO ITS READERS,

ON CLOSING ITS EIGHTEENTH YEAR AND VOLUME.

AT the home terminus of a long and tiresome ride by railroad, we find the printers waiting for the closing article of the Eighteenth Year and Volume of the RURAL NEW-YORKER,—and it must be written NOW, without time for rest or reflection, as other duties are incumbent on the morrow. Had we time, would give a synoptical autobiography of the RURAL, but are constrained to write hurriedly, if not briefly, of its Past, Present and Future.

In closing Volume XVIII, we naturally revert to the past,—to arduous and pleasant labors, struggles and victories,—and feel conscious that our earnest efforts have not only tended to advance the cause of Rural "Progress and Improvement," but also to enhance the Morals, Literary Taste and General Intelligence of Individuals, Families and Communities. Our constant aim has been to make the pages of this journal Instructive, Useful and Entertaining—to render its leading departments reliable on practical and scientific subjects, and so conduct all others that the whole paper should be acceptable to people of intelligence, taste and discrimination, whether residing in Town or Country. How well we have succeeded in this honest endeavor during the past year, we leave the reader to determine; but were the decision dependent upon the prosperity of the paper, and the encomiums bestowed upon its merits and management by both Press and People, there would be no question,—for the RURAL never closed a volume with so large a circulation nor such encouraging prospects.

In regard to the Future, we can confidently promise some decided improvements. As announced in our last, the paper will be greatly enlarged next week—the *increase* in size and reading matter being equal to about eight of its present columns, or over a page and a half, and involving an increased expenditure of some ten thousand dollars per year. The appearance of the paper will also be improved, as more pains will be taken with the typography, illustrations, etc., while a better quality of paper will be used.

But its CONTENTS are regarded as of far more importance than either the size or appearance of the paper, and will receive the most thoughtful care and attention. Our corps of editorial associates, and other contributors, will be augmented and continue to embrace the best talent and ability in the country. The Hon. HENRY S RANDALL, LL. D., will continue in charge of the department of *Sheep Husbandry*, on which subject there is no better authority in either America or Europe. Mr. G. F. WILCOX, an experienced farmer and horticulturist, will continue as principal associate in the Practical Departments, having charge in our absence, and dividing his time between the office and the farm upon which he resides. As we said a year ago, "Mr. W. is eminently qualified for this position. Living on and managing a farm, he knows whereof he affirms on practical subjects, and moreover possesses other rare advantages. Having traveled extensively in Europe, and carefully observed and studied the best systems of culture and management in the countries visited, he is well informed in regard to the practical features of European as well as American Agriculture." As office associates we shall have Maj. HIRAM BUMPHREY and Prof. A. A. HOPKINS. Maj. B.—who has been with us over a year—was a farmer and teacher for many years, but has long been favorably known as an editor and writer. His attention will be chiefly devoted to the Practical and Commercial Departments. Prof. H. has been an occasional contributor to the RURAL for some years, and for several months past a member of its editorial staff,—devoting his time to the Literary, Miscellaneous and News Departments, and displaying rare gifts as a writer of both prose and verse.

Among our Corresponding Editors and Special Contributors we have the pleasure of announcing the names of several able recruits. For example, in addition to P. BARRY, Esq., author of "The Fruit Garden," and former Editor of the Horticulturist, JAMES VICK, the Florist, and others, we expect frequent contributions to the Horticultural Department from F. R. ELLIOTT, Esq., author of "The Western Fruit Book," &c., and other writers of note—while our New York Contributor, "NOW AND THEN," will keep RURAL readers advised in regard to the New York Fruit Market, the best modes of packing, etc., (furnishing information of great value to fruit growers, and such as is not given in any other Agricultural journal.) Dr. DANIEL LEE, of Tennessee,—who has a National reputation as an Agricultural editor and writer,—will contribute frequently as Southern Corresponding Editor. We also expect a series of interesting letters from SOLON ROBINSON during his sojourn in Florida the present winter. Maj. H. T. BROOKS (H. T. B.) and E. W. STEWART, Esq., (E. W. S.) will continue their able and instructive contributions. But we close our enumeration for want of time and space—leaving the announcement of several literary stars for future numbers. Suffice it to say that we purpose to render the Nineteenth Volume of the RURAL NEW-YORKER far superior, *in every respect*, to either of its predecessors, and altogether unequaled as a combined Agricultural, Horticultural, Literary, Family and Business Newspaper.

AGRICULTURAL FORCE IN THE SOUTH.

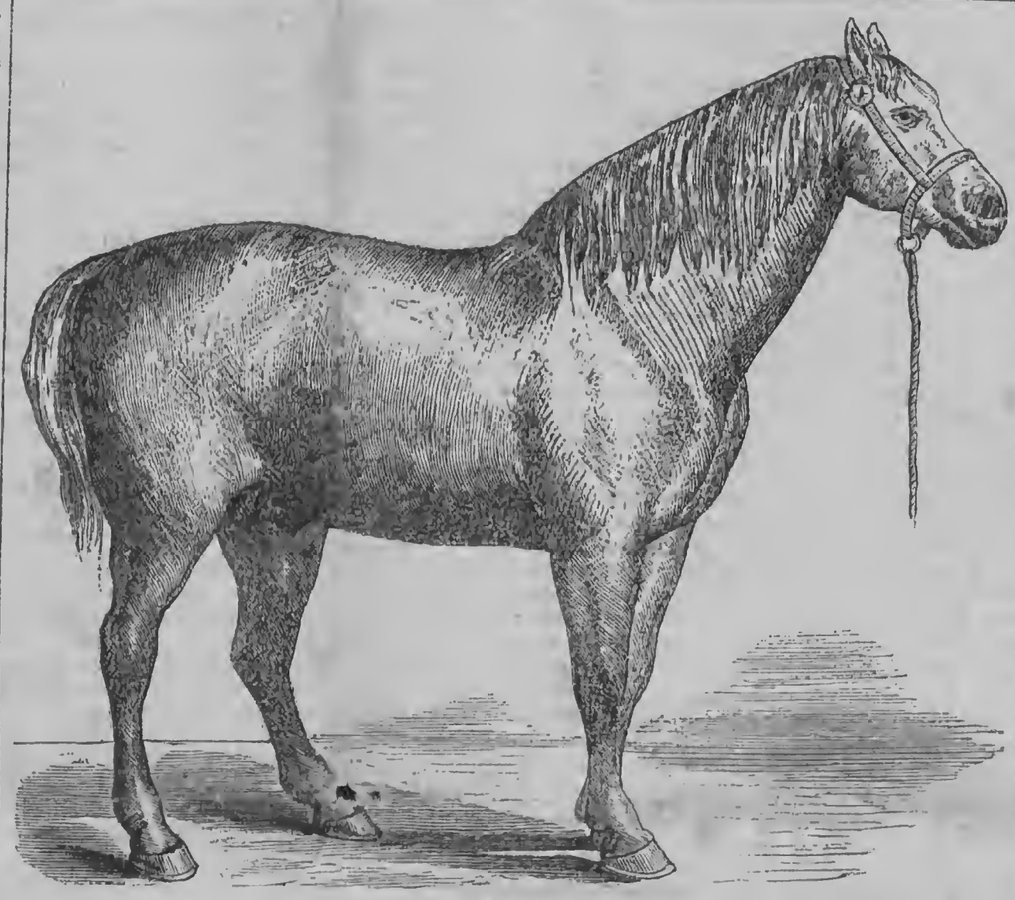
FRIEND MOORE:—Twenty years ago when you were conducting the Genesee Farmer and I was editing the Southern Cultivator, you may remember that I wrote you from Augusta, Ga., that I had seen corn growing below that city which was eighteen feet high, and that you made a foot note intimating that there was perhaps a mistake in the figures, but you "followed copy." Having cut the corn myself and measured it with an iron square, there was no mistake. It grew on the farm of Mr. J. S. MILLER, the gentleman who got $4 a bushel for his crop of wheat the past *May*—it being the first grown this year that appeared in the Northern market, and of a superior quality. On a farm near Mr. MILLER'S I have known wheat sown the middle of December that was ripe and harvested by the middle of May, indicating an agricultural force in Richmond Co., Ga., in two and a half winter months and two and a half spring months, equal to that of about ten months in Monroe Co., N. Y., and eleven months in the best parts of England.

It is rather difficult to estimate fairly the agricultural force of Central and Southern Georgia from the middle of May to the middle of December—seven growing months. Two crops of corn grown thick and massive in drills for forage can easily be made; one of ripe corn, and a crop of ripe Southern peas may also be made. From these facts it follows that the expert farmer may raise a crop of wheat, one of corn and one of peas, in twelve consecutive months on land that may be bought cheaper at this time, all things considered, than in any Northern State or Territory of the Union. What our native farmers and immigrants from the North or Europe most need, is the knowledge that teaches one how to utilize the remarkable force which causes corn to grow eighteen feet high in our very congenial climate, and wheat, oats and barley to mature before it is necessary to plant corn. This climate is as well adapted to the growth of the best European grasses as it is to the best European cereals. Hence stock-raising can be made very profitable.

To raise either grass, wheat or clover on many cotton soils to good advantage, requires more information than many possess; and it is not now my purpose to enter into a discussion of the subject. I should like to see the RURAL NEW-YORKER have a very large circulation in the South; for I am confident that its varied family reading will take with the people, while its professional teachings impart a large amount of instruction in all that relates to the farm, garden, orchard and household affairs. We want not only to forget and forgive much that is unpleasant in the past, but to imbibe deeply of the spirit of progress and improvement which is the motto at the head of the RURAL—the magnetic needle that guides it safely through all the storms and darkness that sometimes envelop our common country.

This Nation has more than six hundred million acres of land south of Mason and Dixon's line with an exceedingly sparse population, which opens both its arms and its heart to receive cordially all who will come and make their homes in a goodly inheritance which belongs to all alike. My health has been better in the South during the last twenty years than it ever was in my native State, New York. At another time I may write something on the arts of preventing sickness by raising and eating fruits, as well as something more designed to illustrate, practically, the agricultural force of the "Sunny South." D. LEE.

Gap Creek, Knox Co., Tenn., 1867.



THE PERCHERON HORSE.

THE PERCHERON HORSE.

ONE of the best and most popular breeds of horses on the Continent of Europe for heavy draft and farm work is the Percheron strain, which originated in France. KLIPPART, in his report of an agricultural tour through Europe, in describing this breed, says:—"The Percherons vary in size as well as in color. The color most sought for is a gray or a dapple gray. The head is elegantly formed, withers high, without being massive, the croup, notwithstanding it is short and very low, is well formed; the hide is comparatively fine and soft, the hair fine, mane and tail rather silky, their carriage and general contour good. The Percheron unites several very desirable qualities; he is very gentle in disposition; as much so if not more than our Morgans; he is very tractable in harness, has great muscular strength and "great bottom," and his movements are sufficiently rapid for a working horse.

There are some singular usages or customs in France relative to this breed, which I learned when in Paris. One of these is that there are no Percheron geldings. I have frequently seen four or five stallions of this breed hitched up *tandem* in a Paris dray or heavy wagon, and I am told that none would be sold to persons who contemplate gelding them. These stallions, in the Paris drays, certainly manifested less viciousness than I often have observed in geldings of our common country horses.

The American traveler in the 'diligence' in France is always struck with the appearance of these horses. Stout, and with the appearance of clumsiness, with their heavy fetlocks, their high shoulder trappings, and their heads carried low, for the French never rein up their draft horses, the novice on the continent is led to fear that he has got behind a 'slow team,' but when the 'conductor' takes the reins, and they set themselves to work, he is astonished at the progress they make along the road, with their very heavy burthen."

FEEDING BEES.

MANY writers (and I among them) once thought, as many yet think, this easy work; and so it is in movable combs, *provided you have combs with sealed honey.*

Practically, feeding bees is one of the most uncertain of all things, to tell the truth. If you fill cells with unsealed honey, or honey and molasses, they will sometimes gorge themselves to gluttony; and no bee will gluttonize itself more freely than the Italian. A gluttonized hive is apt to die; that is, the bees fill themselves over full and become heavy, shiny and long in the abdomen, when they are incapable of doing anything, and often perish in consequence of eating so much. If you put honey in nice little feed boxes on the top of the hive, just the neatest and the most inviting place that can be, then in your feeble swarms they either cannot or will not come up and get it. Often the hive perishes with your slick, full feed-box of honey for them to eat just before them. If you pour honey in among them they sip a little of it, get it on their legs, and soon are a mass of cold, lifeless wretches stuck up with it. If you put your feed under the combs, then they either get into the feed and die, or can't reach it in the cold weather, and it does them no good. So of every other plan I have seen stated or tried; they are very imperfect at the best. The fact is the bees will not, late in the season, or in the winter, take honey and store it in the cells even though starving for the want of it. They will eat only what they need as a usual rule. Why this is so I do not know.

So I now confine myself to two ways of feeding: 1st, I make a candy of white sugar—good refined sugar—by boiling it dissolved in water; and when so hard as to be chitted on a cold iron and not break too easily, or be so soft as to stick to the feet of the bees, I make it into thin sheets and put it in among the combs near the bees. They usually eat it freely enough to live. The best way to make these thin sheets of candy is to wipe out clean a well used and smooth "spider," that convenient article of our households, which perhaps ought to be called *speed-er*, because it speeds or hastens the cooking, and is an analagous word to *cast-er*, because it casts or moves along our furniture. Then pour into the speeder the boiled white sugar, so as to be about one-fourth or three-eighths of an inch thick. If the speeder is cold, it will in a moment flake off in just the thin sheets you desire. Dipping the bottom of the speeder into cold water (outside of it) you can repeat the pouring till you get as many sheets as you need. By this feeding last winter, I saved a hive only two-thirds full of comb, but with an old-fashioned black queen. The product this year of this hive (1867) has been one large swarm that came off with this queen, leaving the cell of another fine queen in the old hive that equals her mother. And the old hive has given me *forty pounds* of clover honey, and *nineteen pounds* of buckwheat honey. And the swarm has given me *twenty-five pounds* of clover honey, and *nine and three-fourths pounds* of buckwheat honey. All this is box honey, and both hives have over thirty pounds each of honey to winter on, in the brood chambers. So, too, Messrs. Editors, you see the old yarn that feeble swarms don't pay to keep or feed is not always true, even though it is a good rule. 2d, My last mode of feeding is, cut a comb in two just one side of the middle partition of it. Thus I get a comb with one side only cells. These I fill with honey or honey and molasses mixed, and put it on the bottom board inside of the hive. The bees usually get at it, and eat every day out of it; for recollect that I said *bees generally in cool or cold weather do not store feed in their cells*, much as one would be glad to have them do so.

If I put this divided comb on top of the hive I cut a round hole in the middle of it, and put it on so that the hole in the hive fits the hole in the comb. Bees feed better out of a comb that is flatwise than out of combs perpendicular as in the hive.

S. J. PARKER.

MERCER POTATOES—ERRORS CORRECTED.

IN a recent discussion before the N. Y. Institute Farmers' Club, the subject of Mercer potatoes was named by Mr. Lawton, who quoted Hazard's Register as to the time of the introduction of this variety. According to this authority, it originated in Mercer county, Pa., in 1833. This is a considerable mistake in point of time. The potato, in question, originated with Gen. Mercer, a resident of the county bearing the same name, and was well known as far north as Erie in 1819, and deemed greatly superior to any other variety grown in Northwestern Pennsylvania.

Another error occurs in the same discussion, in which Mr. Quinn asserted that the Mercer never produced more than 150 bushels to the acre. This is a mistake, and does great injustice to one of the best potatoes ever grown in the country, which, in its palmy days, gave more than double the quantity per acre here assigned on the bottom lands of French creek and its tributaries. The Mercer, it is conceded, is pretty much played out; but this is no good reason for detracting from its former good reputation either as to quality or productiveness, or for post dating its introduction to the favor of the public.—E.

DOES FARMING PAY?

DISCUSSING this oft-mooted subject, CHARLES MORRIS, Lancaster, Penn., writes to the RURAL thus sensibly and logically in the affirmative:—"This question is frequently propounded as though there were a doubt about it. But there is none. In the aggregate it must pay else all other vocations must be speedily abandoned. Farming is the base on which the social edifice rests, but its remuneration, to individuals, depends upon the intelligence which guides farm labor. With some, owing to a lack of money, the information essential to success or to an improvident use of what they have, farming is not remunerative, but, with the mass the case is different, and each year shows in the aggregate increased accumulation. Farming, therefore, like other business intelligently and systematically pursued, pays, and if failures here and there occur, as in other pursuits, they are the exceptions, while general success is the rule."

The Title Page and Index, given herewith, compel us to omit a number of Departments, abridge others, and defer several columns of new advertisements—but as the Index is indispensable, especially to the thousands who preserve the RURAL for future reference, no one can reasonably object. By a glance it will be seen that the Index, though mainly comprising practical and useful matters, indicates that the volume contains a vast amount and variety of valuable reading (more than could be obtained in book form for $25,) and *over Four Hundred Illustrations!* We reckon no subscriber can justly complain that he has not this year obtained full "value received" for his or her money,—yet we expect to do much better next year, with enlarged borders, etc.

Ladies' Department.

THE SNOW.

Soft falls the snow on the waiting earth,
Naked and barren of bloom or green,
Covering the gray of the meadows dark,
Under a beautiful pure white screen,
And the dry leaves murmur and whisper low,
"Cover us, hide us pitying snow."

The frost has been busy for many a day,
Blighting the beauty of summer's bloom,
The last of her flowers have faded away,
The cold winds are chanting a dirge o'er their tomb,
And leafless branches and shrubbery low,
Seem waiting their beautiful mantle of snow.

Oh, there are lives that are dreary and cold,
Blighted by sorrow, or scared by sin,—
Hearts whose chambers are cheerless and old,
Where never love's sunshine entereth in;
Let pity and charity, over them throw,
A mantle as pure as the beautiful snow.

Traverse City, Mich., 1867. A. M.

SHOPPING MANNERS.

"Weighed in the balance (of the counter) and found wanting" in common politeness and respect, we fear not a few of womankind are, now-a-days. Their manners to tradespeople are often ungenerous, and still more often really insolent. Possibly without intent, we admit, but generally from an over-proud "I-don't-care-a-tiveness." The shopper seems to think that the counter is a dividing wall between humanity and something a long ways below it,—that the man or woman on the other side is but a mere automaton without any of the fine feelings and sensitive nerves of man or womanhood. In a multitude of forms is this thought acted out. It comes to build up, in the mind, finally, a kind of caste, in which the buyer ranks number one, and the seller numerous degrees lower.

Of course this is all wrong. The woman behind the counter is as much a woman as the one before it, and more of a lady if she preserves her good breeding and proper dignity. For there is a degree of dignity and grace which is the birthright of womanhood, and to which she may cling whether she buys fine silks and genteel bonnets or sells them.

Belle Otis, in "The Diary of a Milliner," tells of a well dressed lady who came into the shop and wished to see some handsome bonnets. She was gratified. She tried on about thirty, and commented upon each, asked the price of each. Then she went to a side table, and tried a score more. "Haven't you some put away in drawers?" she asked. The milliner went the rounds of a dozen drawers, containing a half dozen bonnets each. None suited. Finally she pointed to the window and desired to be shown two handsome bonnets hanging there. Is it any wonder that the sorely tried shop keeper said, "If you really wish to buy a bonnet I will get them, but I fear they will suit you no better than the others have done?"

"I don't wish to buy a bonnet; I bought mine last week," was the cool reply. And what was her motive, then, in trying so many? She wanted to find out the prices to see if she had been cheated in her purchase! Laudable—very! But she needn't have tried them all to discover that. Well, she wanted to see, too, if she could find one more becoming than hers. Her milliner had told her if she could find one in the city more so she might keep the bonnet and the money would be refunded!

An exceptional case, you say. We should be sorry to think otherwise. It is of the rather numerous exceptional cases that we are speaking. No readers of the RURAL, we trust, are included among them. There are many human littlenesses, however, in natures not exceptional, and they are more apt to manifest themselves in shopping than almost anything else. A degree of selfishness in bargaining is naturally to be expected. It is not, indeed, to be wholly condemned. But it behooves every one to take heed lest it be perverted, and crop out in petty meannesses utterly unbecoming, and in the end degrading.

There are two sides to this counter balance, as there are to every other. Perhaps the individual behind the counter lacks as much in genuine politeness, not unfrequently, as does the one opposite. We have seen tradespeople supercilious and inclined to insolence, and such deserve condemnation as much as or more than the shoppers. But is it any wonder that they now and then lose patience? Being courteous, and showing goods to hundreds who they know have no intention to buy, who are only gratifying a curious taste at the expense of others, is sufficient to try any person's temper. Have we ever thought how many yards of forbearance a shop keeper measures off in a day? A little goes with a bit of ribbon, may be, a good deal with the silk for a dress—here a little and there a little, until Job's remarkable equanimity is equalled, and the nightfall sends all the shoppers to their homes!

Choice Miscellany.

READER! SPARE THE BOOK.*

[Dedicated to all Possessors of Vol. XVIII of the Rural New-Yorker.]

Reader! spare the book!
Cut not a single leaf!
You dream not of the pains we took,
Or you'd regard our grief.
For many a thoughtful hour
We cull'd our fruitful brain
To set before you fruit and flower
All strung on beauty's chain.

Reader! spare the book!
It is our fancy's pet:
Turn daintily its leaves, and look
How tastefully 'tis set!
There's learning in its pages!
There's humor in its lines!
And there the wisdom of the sage
With poesy combines.

Reader! spare the book!
Make it your daily pride,
And keep it in a cherished nook
Your cunning skill to guide.
And if your file is not complete†
Please name the lacking number,
And you shall be in its receipt
Before you long can slumber.

MOSSES.

Soft, green mosses, so unlike the frail sisterhood of the fields that withered in the icy breath which came from the North-land, leaving Mother Earth to battle alone in the great struggle of Life and Death. But over the mosses—lowly children of earth—pass alike unheeded snow of winter and heat of summer. How beautiful they grow under the shadow of the wood, weaving silently a carpet soft as evening clouds; and all the more lovely because none can tell the mystery of their growth, nor why fallen tree and ruin is ever their chosen garden.

Ah! swift-footed Time, why is it that where your steps fall heaviest, there grow the soft folds greenest, thickest? In the dark or in the light, still silent, busy, patient, touching and tinting with magic pencil, till the harsh outlines are softened to beauty, and a second Eden springs from the ruin of years. Castles grow grey in the storms of ages, but the mosses and lichens, with quiet, loving hands, in pity hide the wreck of human skill. The lesson of endurance is deeply graven on every fiber, from the soft velvet mosses which hide away from the sunrays to the long thread-like skeins which swing from the trees away in the "Sunny South."

The light of centuries has shone on yonder mountain, but still the moss on the tree dies not, nor the lichen on the stone. Flowers and mosses, rarest gifts dispensed for fallen mortals! Of one we may gather for love offerings, but the other, "of these the wild bird shall make its nest, and the weary child his pillow." Kind, loving friends! first in pity, last in love. Not many years shall take their flight, ere we shall sleep, and the cold wind of winter, searching, shall find no breath of flowers—only a quiet mound, where the moss watches, sleepless, over sacred dust. Lockie.

Cannonsville, N. Y., 1867.

A BEAUTIFUL PICTURE.

The man who stands upon his own soil, who feels that by the land in which he lives—by the laws of civilized nations—he is, the rightful and exclusive owner of the land he tills, is by the constitution of our nature, under a wholesome influence not easily imbibed from any other source. He feels, other things being equal, more strongly than another, the character of a man as the lord of an inanimate world. Of this great and wonderful sphere which, fashioned by the hand of God, and upheld by His power, is rolling through the heavens, a part is his—his from the centre to the sky. It is the space on which the generation before moved its round of duties, and he feels himself connected by a link with those who follow, and to whom he is to transmit a home.

Perhaps his farm has come down to him from his father. They have gone to their last home! but he can trace their footsteps over the scenes of his daily labors. The roof which shelters him was reared by those to whom he owes his being. Some interesting domestic tradition is connected with every enclosure. The favorite fruit was planted by his father's hand. He sported in boyhood beside the brook which still winds through the meadow. There lies the path to the village school of earlier days. He still hears from the window the voice of the Sabbath bell which called his father to the house of God; and near at hand is the spot where his parents laid down to rest, and where, when his time has come, he shall be laid by his children. These are the feelings of the owner of the soil. Words cannot paint them; they flow out of the deepest fountains of the heart; they are the life-spring of a fresh, healthy and generous national character.

Hardness.—Hardness is a want of minute attention to others. It does not proceed from malignity or a carelessness of inflicting pain, but from a want of delicate perception of those little things by which pleasure is conferred or pain excited.

It is not what we eat, but what we digest, that makes us fat—not what we make, but what we save, that makes us rich—not what we read, but what we remember, that makes us wise.

That philanthropy which is most unostentatious springs from the most generous impulses.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

CHRISTMAS.

A song of praise! a song of praise!
For Christ was born in Bethlehem!
Oh, raise on high your tuneful lays,
And sing aloud your joyful hymn,
For on this happy Christmas day
Our Christ in lowly manger lay.

No downy pillow for His head,
No curtains bright around Him hung,
But angels hovered o'er His bed,
Heaven's arches with their chorus rung,
And Blessed Mary, Virgin mild,
Kept watch above the Holy Child.

And on this day He comes again,
Oh, turn Him not, refused, away,
But take Him in and heal the pain
That He has borne for many a day;
And let Him come without a fear
To seek your love and share your cheer.

E'en now He's coming down the street,
Go, give Him welcome from your store;
The snow and ice beneath His feet,—
A beggar stands before your door!
For if you do for one of these,
You seek in truth your Lord to please.

Ella D.

GUIZOT AT HERBERT'S GRAVE.

Mons. Guizot has touched all Paris by the sadness of the speech he made a few days since at the grave of Mons. Herbert. The following paragraph is quite touching:—"I must express here the sentiment I feel at this moment. I am weary of seeing them die before whom I expected to die; I am weary of seeing myself preceded in the road to the Eternal Future by them I should have preceded there, and who seemed destined to follow me there—to follow me at a great distance. This greatest of misfortunes has befallen me in my dearest affections; it pursues me in my friendships. A few years since, at Paris, I followed to the grave one of my most distinguished cotemporaries in literature, Mons. Ampere, whom I had appointed a few years before to the chair of French Literature in the College of France, which he filled in a most brilliant manner. A few months after Mons. Ampere, I saw one of his warmest admirers die, a young priest, the Abbe Henry Perreyve, who died, as I have elsewhere said, in the flower of youth, faith and virtue. And now here I stand before the tomb of Mons. Herbert, long the faithful associate of my labors in the diplomatic career. These are sadnesses which leave permanent uneasiness in the soul."

KEEPING NEAR THE GREAT CAPTAIN.

During the roar and tumult of a great battle in Northern Georgia, while rows of artillery were belching forth fire and death, and sky and land trembled to the tumult of the dreadful battle-shock, eye-witnesses say that little birds flew down from the tree-tops and perched themselves, some upon the shoulders of the gunners, and others upon the very wheels of the cannon. There they were safe. So in the rude and tremendous battle of life we all need to be near the great Captain of Salvation, and while his lightnings flash and thunders roll, and arrowy tempests fall upon his foes, we, safe by his side, can even share in the rapture of the strife, and exult in the victories He gains. Our own strength is perfect weakness, but our perfect weakness is changed into the strength of Omnipotence itself when we walk with Jesus, and wear his armor, and fight with all prayer and supplication in the Spirit.

All There.—A whole family in heaven! Who can picture or describe the everlasting joy? No one absent. Nor father, nor mother, nor son, nor daughter are away. In the world below they were united in faith, and love, and peace, and joy. In the morning of the resurrection they ascended together. Before the throne they bow together in united adoration. On the banks of the River of Life they walk hand in hand, and as a family have commenced a career of glory which shall be everlasting. There is hereafter to be no separation in that family. No one is to lie down upon a bed of pain. No one to wander in the arms of death. Never in Heaven is that family to move along in the slow procession, clad in the habiliments of woe, to consign one of its members to the tomb. God grant that, in His infinite mercy, every family may be thus united.—*Rev. Albert Barnes.*

Christians in the Vale.—Some well-meaning Christians tremble for their salvation, because they have never gone through a valley of tears and sorrow to arrive at regeneration; to satisfy such minds, it may be observed, that the slightest sorrow for sin is sufficient, if it produce amendment, and that the greatest is insufficient, if it do not. Therefore, by their own fruits let them prove themselves; for some soils will take the good seed without being watered by tears or harrowed up by affliction.

The sweetest word in our language is Love. The greatest word in our language is God. The word expressing the shortest time is Now. The three make the greatest and the sweetest duty man can perform.

The thought of death, that strikes the wise man with awe, may leave unshaken the self-complacency of the fool. The wind that rocks the tower whistles through the hut.

In reading the Scriptures, we should not be satisfied, unless we have a consciousness of reverence, a feeling of deep interest, and a desire for spiritual profit.

All are brothers before God. Mutually needful we must be; mutually helpful we should be.

Various Topics.

SAVING.

A man is very apt to deceive himself into the idea that he cannot save, and that it is of no use attempting it. He convinces himself that his income is little enough for present necessities, and puts off the hope of accumulation, if formed at all, to the happy period when he shall be in somewhat better circumstances. His circumstances do, perhaps, improve; but his wants have extended as much, and still the time for saving is far ahead. Thus he goes on and on, resolving and re-resolving, until he is at last surprised by some sudden calamity which deprives him even of his ordinary earnings, or by death which cruelly cuts him off in the very midst of the best intentions in the world.

Did any man, we would ask, experience a falling off in his income, even to so small an extent as one dollar in the week? Many answer they have. Did they continue to live at a reduced rate? They reply, we did so—we were compelled to do it. Very well; and, pray, what is the difference between being compelled to live a dollar a week cheaper and compelling yourself to do it? Or, suppose stationary wages and a rising produce market—did you not find that though bread rose a penny a loaf, and other provisions in proportion, you still continued to make your income procure something like the usual exhibition of victuals? You answer, yes. And where, I would ask, is the difference between spending a small extra sum upon certain articles of food and laying it by for accumulation, supposing it not to be so needed? It is clear that if you had the fortitude and strength of character to make the savings as much a matter of compulsion as the other circumstances are, you would save. You have, therefore, no excuse to present for not saving, except that you are too weak-minded to abstain from using money which is in your power.—*New York Ledger.*

THE ART OF GRINDING TOOLS.

More than one-half of all the wear and tear and breakage and bother of dull tools comes from a lack of proper knowledge and practice in grinding. All steel, however refined, is composed of individual fibers laid lengthways in the bar, held firmly together by cohesion; and in almost all farm implements of the cutting kind the steel portion which forms the edge, if from a section of a bar, is laid in and welded to the iron longitudinally, so that it is the side of the bundle of fibers hammered and ground down that forms the edge. Hence, by holding on the grind-stone all edge-tools, as axes, drawing-knives, knives of reapers, scythes, knives of straw-cutters, etc., in such a manner that the action of the stone is at right angles with the plane of the edge; or, in plainer words, by holding the edge of the tools square across the stone, the direction of the fibers will be changed so as to present the ends instead of the side as a cutting edge. By grinding in this manner a finer, smoother edge is set, the tool is ground in less time, holds an edge a great deal longer, and is far less liable to "nick out" and break. —*Germantown (Pa.) Telegraph.*

CURIOUS CALCULATIONS.

What a noisy creature would a man be were his voice, in proportion to his weight, as loud as that of a locust. A locust can be heard at a distance of one-sixteenth of a mile. The golden wren is said to weigh but half an ounce; that a middling-sized man would weigh down not short of four thousand of them; and it must be strange if a golden wren would not outweigh four of our locusts. Supposing, therefore, that a common man weighs as much as sixteen thousand of our locusts, and that the note of a locust can be heard one-sixteenth of a mile, a man of common dimensions, pretty sound in wind and limb, ought to be able to make himself heard at the distance of one thousand six hundred miles; and when he sneezed "his house ought to fall about his ears!" Supposing a flea to weigh one grain, which is more than its actual weight, and to jump one and a half yards, a common man of one hundred and fifty pounds, with jumping powers in proportion, could jump twelve thousand eight hundred miles, or about the distance from New York to Cochin China.

Some idea of the extent of London may be formed from the fact that there are between seven and eight thousand streets, many of them being miles in length. There are one hundred and twenty-five thousand shop-keepers. There are two thousand different kinds of trades, among which are nineteen hundred butchers, three thousand grocers, fifteen hundred dairymen, twenty-seven hundred bakers, three thousand tailors, three thousand four hundred shoemakers, fifteen-hundred linen drapers, and six hundred hatters.

An Ancient Ring.—It is claimed for a certain ring, lately bequeathed to his daughter by a knight who died, Teighmouth, that it was once the property of the Queen of Sheba, who gave it to Solomon. It was taken from Jerusalem by Titus, brought to Rome, and was given by Clement VIII. to Wolsey. From him it passed to the monks of Leicester Abbey, and thence into private hands on the dissolution of the monasteries. It is added that the fortunate owner of this ancient relic is a ward in chancery.

Probably the oldest book extant, ever published in America, is now in possession of General J. W. Phelps, of Vermont. It is a dictionary of the Aztec language, and was printed in the city of Mexico, in 1571—nearly fifty years before the landing of the Pilgrims of Plymouth, and more than thirty years previous to the establishment of the colony at Jamestown, Va.

The Reviewer.

Three English Statesmen: A Course of Lectures on the Political History of England. By Goldwin Smith. [16 mo., pp. 293.] New York: Harper & Brothers.

The series of lectures here given numbers four, and the statesmen of whom they treat are Pym, Cromwell and Pitt. To the latter, as a character made up of more complex combinations than the others, most consideration is accorded, two lectures telling of his glory and his shame. In the sketching of each illustrious personage named, a master mind is shown—one profoundly versed in history, and capable of analyzing all its facts and incidents thoroughly. The four chapters, therefore, are rare historical mosaics, and will reward study. But with all due respect to Goldwin Smith, as one of the foremost scholars of the time, and without wishing to be hypercritical, we must say that he seems to us slightly inconsistent. Clearly and tersely defining Statesmanship as the art of avoiding revolution, he proceeds to discourse of Pym and Cromwell as statesmen, while he graphically pictures the one as inaugurating a revolution, and the other as carrying it on, or really inaugurating another. If statesmanship be to avoid revolution, can revolutionists be statesmen? Sold by Steele & Avery.

Napoleon and the Queen of Prussia. An Historical Novel. By L. Muhlbach, Author of "Marie Antoinette," "Joseph II. and his Court," etc., etc. Translated from the German by F. Jordan. Complete in one volume. With Illustrations. [8vo.—pp. 215.] New York: D. Appleton & Co.

The special plea for historical novels is often put forth, that they teach history in an attractive form. As an offset it may be argued, that where fact and fiction are intermingled we are generally at a loss to distinguish between them. One needs to be a good student of history to read romances claiming to be historical without lumbering up the mind with a mass of mere rubbish. But being thus well versed, one would find little inducement to peruse such volumes as the one before us. Very many, however, will find a certain fascination in the characters of Kings and Queens and courtiers, as portrayed familiarly by the story teller, and will trace the experiences of the hero of Austerlitz and the lovely Queen of Prussia with much interest. Sold by Adams & Ellis.

The Turk and the Greek; Or, Creeds, Races Society and Scenery in Turkey, Greece, and the Isles of Greece. By S. G. W. Benjamin. [16mo.—pp. 298.] New York: Hurd & Houghton.

Here are ten pleasantly written chapters illustrative of Oriental Life, by one who is evidently well informed regarding it. They give a vivid impression of the races and countries of the Levant, and are enlivened by interesting anecdotes relative to their customs, manners, &c. The last chapter is devoted to a succinct history of Crete, the little island whose people so much desire independence. Sold by Dewey.

The Diary of a Milliner. By Belle Otis. [16 mo., pp. 200.] New York: Hurd & Houghton.

There are many outlooks upon the world of human nature, philosophical, wise and otherwise. That from behind a milliner's counter may not be the latest, but we haven't read anything about it before. The little weaknesses of shopping are keenly pictured in the disconnected scenes in this beautiful volume, and if all kinds of people wish to see themselves as their fellows behind the counters see them, they can be gratified by perusing it. Sold by Adams & Ellis.

Oliver Twist. By Charles Dickens. [12mo.—pp. 172.] New York: D. Appleton & Co.

The popularity of Mr. Dickens' writings is sufficiently attested by the numerous editions therof which are offered to the reading public. This volume is the first of an edition for the million, well printed, bound in paper with illuminated covers, and afforded for the very low price of twenty-five cents each. The other volumes will appear in rapid succession. Sold by Adams & Ellis.

Works of Charles Dickens. Globe Edition. The Pickwick Papers. Four Volumes in One. [16mo. —pp. 1164.] New York: Hurd & Houghton.

Another volume of the incomparably beautiful Globe Edition of Dickens, with its charming little illustrations, its fine white paper and clear cut type. The chronicles of the Pickwick Club first brought Mr. Dickens into general repute as a writer, and they will long continue to be read with pleasure. For sale by Dewey.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., DECEMBER 21, 1867.

Advertising Rates.—After the first of January, 1868, the Rates of Advertising in the RURAL NEW-YORKER will be as follows, for each insertion:

Advertisements, Inside, 75 cents per line, Agate space.
" Outside, $1 " " "
For Extra Display and Cuts, a price and a half.
Special Notices, Nonpareil leaded, $1.50 per line.

Reason—Our measure will be considerably wider and circulation much greater (at least twenty thousand) than when the former rates were established.

☞ To make room for Title Page, Index, &c., we are obliged to defer nearly three columns of advertisements intended for this number.

NEWS OF THE WEEK.

New York State Items.

THE old Reformed Dutch Church at Kinderhook was burned on the 14th inst. Loss about $30,000.

By a gas explosion in New York city on the 20th inst., the dwelling in which it occurred was utterly wrecked.

The Spring Abbey House, near the Cold Spring race track, Buffalo, was burned on the 18th.

The Steuben County Treasurer's safe was robbed a few nights ago of $8,000.

A fire in Canandaigua on the 20th inst., destroyed the Hubbell Block. The total loss is estimated at about $25,000.

Eleven persons lost their lives by the burning of a tenement house in New York city on the 16th inst., and several others were injured.

The earthquake shock which was distinctly felt in Burlington, Montreal, and other places outside the State, on the 28th inst., was quite violent at Ogdensburg, though no damage was done, and was also distinctly marked at Syracuse and Auburn.

The funeral services of Rear Admiral James S. Palmer, whose remains were brought home in the Susquehanna, took place in Brooklyn on the 21st inst.

From Washington.

THE President has transmitted to Congress a message giving his reasons for suspending Mr. Stanton as Secretary of War. There seems little probability that Mr. S. will be reinstated.

The President has removed David W. Ballard as Governor of Idaho, and nominated to the Senate Isaac L. Gibbs for that office.

The Committee of Ways and Means find that Government ought to receive as whisky tax $305,578,400; whereas, the actual receipts were only $28,000,000.

Mr. Sherman has reported, from the Committee on Finance, a bill to fund the national debt, and for the conversion of United States notes.

Col. Ely S. Parker, of Gen. Grant's Staff, disappeared suddenly not long since on the eve of his marriage. He was found finally at a hotel, sick, and is said to have been dragged by one of the Indians of his tribe, to prevent his union with a white lady. The affair has caused much excitement.

The Deficiency Bill now before Congress provides for reconstruction expenses in the different Military Districts to the amount of $675,000. For supplies, transportation and incidental expenses in the Quartermaster's Department, $12,000,000 are needed.

It is probable that the order reducing the force of workmen in Government service will not be enforced until the present season of distress has expired.

From the South.

GEN. HANCOCK has revoked the orders of Gen. Mower, removing various judicial and civil officers in the Fifth Military District. These removals were at first suspended by orders from Washington.

Notice of an election in Texas on the question of Convention or no Convention, and of delegates to the same if it is carried, is given by Gen. Hancock in special orders. The election is to be held on February 10th to the 14th, inclusive; and ninety delegates are to be elected. The total registration is 104,269.

Gen. Ord has issued an order directing commanding officers to notify the freedmen that all who are able will be required to earn their own living during the coming year, and that all who can and will not earn a livelihood will be liable to arrest as vagrants.

An effort is making to secure a further postponement of the collection of direct taxes in the South, owing to the distress there.

ANOTHER HORRIBLE RAILROAD ACCIDENT.—The most awful railroad disaster upon record took place on the Lake Shore Road near Angola, on the afternoon of the 18th inst. The two rear passenger cars of the New York express train from Cleveland were thrown off a bridge nearly fifty feet high. One fell the entire distance, striking upon one end and hurling all its inmates into a crushed and helpless mass, then took fire, and the dead and wounded were burned together. Forty-four dead bodies were recovered from the wreck, twenty-one of which were in such a charred condition as to be past all identification. But two or three were killed in the other car, which went off on the opposite side and at the other end of the bridge, where the embankment was of much less height, but nearly all the passengers were severely injured.

THE Michigan Southern and Central Railroad Company's grain elevator, in Toledo, was destroyed by fire on the 21st inst. About 80,000 bushels of grain, mostly wheat, were consumed, involving a loss of $300,000.

FROM EUROPE.—The Fenian excitement in England (Dec. 23) still engrosses considerable attention. A movement is on foot to ameliorate the condition of Ireland as the most effective means of suppressing Fenianism. A terrible explosion occurred at Newcastle on the Tyne on the 17th inst. The authorities having received information that a quantity of nitro-glycerine had been secreted, as supposed, by Fenians, in that place, the Sheriff and a large squad of policemen proceeded to the spot indicated, and found the oil packed in the usual manner. While it was being removed, an explosion occurred, killing or wounding nearly the whole party. An attempt was made on the 18th inst. to blow up one of the walls of Millbank Jail, but failed. The crime is charged upon the Fenians, a number of that order being confined in the prison. Hostilities have again broken out in Candia.

MORE TERRITORY.—The treaty for the cession of the Danish Islands St. Thomas and St. John to the United States, has been completed, and the transfer will be effected on the first of the new year. The amount to be paid is $7,500,000. King Christian has issued a proclamation to his subjects announcing the cession. In the treaty there is a proviso that the island of St. Croix shall be included, if the United States is willing to assume the responsibility of the payment of the French claim.

HAYTIEN NEWS.—President Cabral is reported to be marching against Hayti at the head of a Dominican army. Gen. Leon Montez has been inhumanly murdered in his dungeon. Attempts to poison and smother him failed, and he was then stabbed in the skull with a chisel. Salnave has been successful thus far in putting down the revolutionists at the Cape.

THE GREAT MUSIC HALL ORGAN.—Since the introduction of this noble instrument, a higher standard of Organ music has been presented to the public, and every Wednesday and Saturday noon, people from different portions of the country, who happen to be journeying though the city, gather to listen to the tones of the grand King of instruments, and thus the taste for a purer style of Organ music, has, in a degree, been created. Even those who have long studied the Piano, are beginning to desire a class of music with sustained chords and suspended harmonies, and many are introducing into their homes the AMERICAN ORGANS, manufactured by S. D. & H. W. Smith of Boston, with which the excellent Organ pieces may be so finely rendered and enjoyed in the parlor. These instruments have also greatly assisted in elevating the taste toward a better class of music, and have been very efficient in developing the latent talent in the home circle.—*Boston Post.*

CLUBBING WITH OTHER PERIODICALS.

We have made such arrangements for clubbing the RURAL NEW-YORKER with other first-class periodicals that we can furnish them at greatly reduced rates. For instance, we will furnish the periodicals named below, for one year, as follows:

		Full price.
Rural and Maryland Farmer for	$3.50	$4.50
Rural and No. Western Farmer "	3.50	4.50
Rural and Southern Cultivator "	4.00	5.00
Rural and Hall's Jour. of Health "	3.50	4.50
Rural and Our Young Folks "	4.00	5.00
Rural and Riverside Magazine "	4.00	5.00
Rural and either the Atlantic, Harper's, Putnam's or Lippincott's Magazine, (or Harper's Bazar or Harper's Weekly,) "	5.50	7.00

Other magazines and journals are omitted for want of space, but may be given hereafter.

CLOSING ITEMS AND REMINDERS.

Close of Volume—"Time Up."—This No. closes Vol. XVIII of the RURAL NEW-YORKER, and terminates our engagements with a great majority of its supporters—all whose subscriptions expire with the year. As our terms are strictly *in advance*—the cash system being the best for both subscriber and publisher,—all interested will note that a prompt renewal is necessary to secure the uninterrupted continuance of the RURAL's visits. Those whose time is up may know it from the fact that either 936, or no figures at all, are given after name on address label. We trust all present subscribers will renew, and that many will induce their friends to take the Enlarged and Improved RURAL for 1868.

Bound Volumes.—Handsomely bound copies of this volume of the RURAL will be ready in a few days. Price, $4. We can also furnish bound copies of most of the volumes published during the past ten years. Price, $4 per volume, for any later than 1860—(we have none of 1862 or 1864)—and $3 for 1860 or any preceding volume which we can furnish. ☞ We cannot furnish all the back volumes, except by purchasing several. As we have a number of recent orders for complete sets, we will pay liberally for perfect copies (either bound or unbound) of such as we lack, viz.: Volumes I, II, III, IV, VIII, XIII and XV. Persons having these volumes to dispose of will please advise us, stating price.

Not a Two Dollar Paper.—Those who remit us $2 or $2.50 for a yearly copy of this journal—saying they can get this or that paper for the amount—are respectfully informed that $3 is our lowest price for a single copy, and that we don't publish one rate and accept another. Such as want a $2 paper must therefore send elsewhere, as we cannot afford the luxury of their "patronage."

☞ **Additions to Clubs** are always in order, whether in ones, twos, fives, tens, or any number. Many agents, after sending one club, form others, and thus secure additional or larger premiums. A host of people are dropping other papers about these days—many have already changed to the RURAL—and our Agent-Friends should improve every opportunity to secure such as recruits for the "RURAL Brigade."

The Enlargement of the Rural, next week, will be material—equal to *an increase of a page and a half* of its present reading surface. Don't "forget to remember" this when talking to your friends and neighbors about the RURAL.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, Dec. 21, 1867.

GOLD continues weak, but the decline has a good deal checked the advance in sterling exchange, which causes considerable shipment of specie. Something over $1,000,000 went to Europe by Saturday's steamers. The price of gold at the New York Board yesterday was 133¾.

There is a very fair supply of money in Rochester, and in Western New York generally. That is, business men, who can give the requisite security, find no difficulty in obtaining such accommodation as they require. Collections are rather slow.

Money is growing easier in New York, and rates of interest tend downward. This was unexpected so near the close of the year, but the Banks seem to be prepared for quarter day, and are not calling in their loans to the extent that was anticipated. The large dividends to be made on or about the first of January, by various corporations, will have a favorable effect on the market.

A National Commercial Convention has been called to meet in Boston, on the 5th of February. It will be similar to the Convention which was held in Detroit in 1865, or rather a continuation of that Convention. Some of the questions acted upon by the recent Manufacturers' Convention at Cleveland will come up for discussion, but the range of topics will be much wider.

WOOL.—Prices of wool last week were maintained, and sales at the East were large. The Boston sales foot up over 1,200,000 lbs., at a range of 35@60c. for fleece. Some of the transactions were on speculation, but go to show there is increased confidence in the future of the market.

The local produce market presents no marked or new features. Wheat and flour remain unchanged. Barley is a shade higher, and is quoted at $1,25@1,40. Provisions are without much change. Mess Pork $22@22,50. Dressed Hogs 8¾@9¼c. Butter shows a tendency downward—quoted at 31@32c. Other articles without change. Clover, medium, $6@6,50.

The Provision Markets.

New York, Dec. 21—Ashes, pots, $8,25@8,50; pearls, $12,00@12,50. Cotton, 15@15¾c. Flour, sales at $8,10@16,00. Wheat, $2,56@2,75. Rye, $1,30@1,60. Barley, $1,35@1,85. Corn, $1,38@1,40. Oats, 85@86c. Pork, new mess, $21,25@21,37; old do. $00,00@00,00; prime, $18,75@30,00. Beef, new plain mess, $13,00@18,00; new extra mess, $18,50@21,00; beef hams, $30,00@32,00. Pork hams, 12@13¼ cents. Shoulders, 8@9¼ cents. Lard, 12¾@13¾cts. Butter, 30@46c. Cheese, 11@15c. Hops, 30@60c Dressed hogs, 9¾@11c.

Chicago, Dec 21.—Flour, $8,50@9,50; Wheat, $1,70@1,88; Corn, 41½@41¾c; Oats, 55@55½c; Rye, $1,57@1,58; Barley, $1,65@1,70. Pork, mess, $21,25@21,25; Lard, 11@12c; Butter, 25@30c; Cheese, 15@18c.

The Cattle Markets.

New York, Dec. 19.—The current prices for the week at all the markets are as follows:—Beef Cattle, $8@17,00, Cows and Calves, $35@130; Veal Calves, 9½@12c.; Sheep and Lambs, $3,75@5,50; Swine—Corn-fed, 6¼@6¾c; light and medium, 6¾@6¾c.

Albany, Dec. 19.—Beeves, prices ranging from 3@9¾c. Milch Cows, $30@90. Sheep, common to good, 4½@7c; Hogs, 6@8¾c.

Chicago, Dec. 19—Beeves range at from $5,25@7,75; Hogs, live, $5,50@7,25; dressed, $7,25@7,50.

The Wool Markets.

NEW YORK, Dec. 21—Wool, market is a shade firmer and in good demand. Sales 560,000 lbs. at 39@50c. for domestic fleece; 32@38c for pulled; 26@27c for Texas; and 22@39c for California.

Cincinnati, Dec. 18—The Gazette gives the following quotations:—Tub-washed, 35@35c.; very clean toll wool, 38@40c, and unwashed do, 32@33c; pulled, 25@28c; Fleece—Common to ¼ blood, 35@35c, ¼ to ½ do, 35@37c; ½ to ¾ do, 38@40c; ¾ to full do, 40@42c ₰ lb.

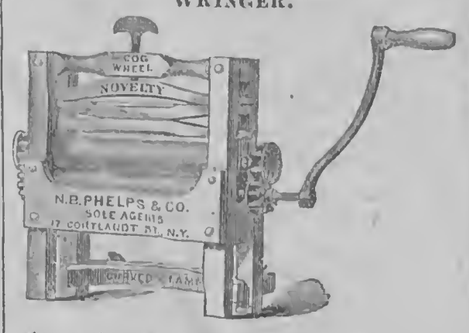
SEND STAMP FOR SIXTEEN Pages Description of some of the finest Imported and Thoroughbred Animals and Fowls in America. L. B. SILVER, Salem, O.

NOVELTY AND CHAMPION CLOTHES WRINGER.



Among the numerous awards given to these Wringers in 1867, were the

HIGHEST PREMIUMS BY THE GREAT AMERICAN INSTITUTE, AND New England Union Fairs.

Although these Wringers have been in the market only about *TWO* years, their sale far exceeds that of all other Wringers combined. Over

300,000

dollars worth have been sold in the past year, which shows conclusively how well they are appreciated.

A Gold Medal (the only one *EVER* given for a Wringer) was awarded the manufacturers of these Wringers in 1865.

N. B. PHELPS & CO., GENERAL AGENTS, 17 Cortlandt Street, New York.

Sold by Dealers in Hardware, House-Furnishing Goods and General Merchandise everywhere.

BAKER'S CHOCOLATE AND COCOA PARIS EXPOSITION, 1867.

Leaf, Flower and Fruit of the Cocoa with a pod opened.

W. BAKER & CO'S American, French, Homœopathic and VANILLA CHOCOLATE PREPARED COCOA, BROMA,

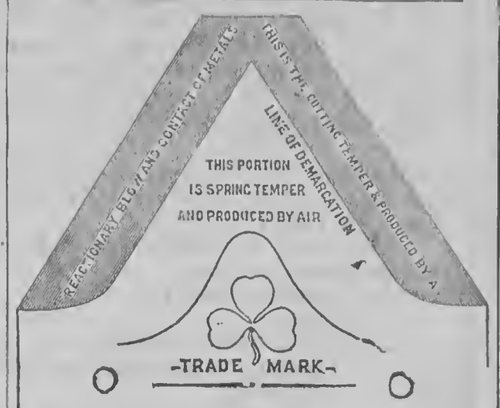
Cocoa Paste, Homœopathic Cocoa, Cocoa Shells, Cracked Cocoa, etc.

THESE Manufactures, to which FIRST PREMIUMS have been awarded by the CHIEF INSTITUTES and FAIRS of the Union, and at the PARIS EXPOSITION OF 1867, are an excellent diet for children, invalids and persons in health, allay rather than induce the nervous excitement attendant upon the use of tea or coffee, and are recommended by the most eminent physicians.

For sale by the principal Grocers in the United States.

WALTER BAKER & CO., Dorchester, · · · Mass.

AGENTS WANTED.—JUST ISSUED—LEE AND HIS LIEUTENANTS, comprising a life of Gen. Lee and every Southern General of distinction. Also "THE LOST CAUSE," an official Southern History of the War,—patronized by tens of thousands eager to hear "the other side." E. B. TREAT & CO., Publishers, 654 Broadway, New York. 932-6teo



REYNOLDS, BARBER & Co. *Sole Manufacturers* AUBU

"THE REYNOLDS" MOWER AND REAPER KNIVES, manufactured exclusively by us, under *Reynolds' Patents for tempering steel "without the aid of any liquid,"* received the only award at the great "*National Implement Trial,*" held at Auburn in 1866. They *possess*

The Following Superior Qualities.

1st. They are made with a fine cutlery temper at the edges.
2d. They hold only a *spring temper* in the center, and at the heel.
3d. They are warranted *perfectly uniform,* every knife being exactly alike in temper.
4th. We warrant they *can be ground from eight to ten times without losing their cutting edge.*
5th. Finally, *we will warrant them to cut from 40 to 50 acres of grain or grass without once being ground.*

We are the sole manufacturers of these Knives in the United States and Canadas. Each Knife hereafter will bear our Clover Leaf Trade Mark, as shown in above cut.

Read what the National Committee says of our sections:

"Desirous of investigating reaper and mower sections as thoroughly as possible, we collected the sections of different makers to as great an extent as we were able, and subjected them to a series of careful experiments. We found no fractures in any of the sections manufactured by the Messrs. Reynolds of Auburn, but we detected them in about 10 per cent. of those made by other manufacturers. We caused nearly 1-16th of an inch to be successively ground off from the edge of each of the samples, examining carefully the temper of the edge after each grinding. The sections of Mr. Reynolds retained their temper perfectly for ten successive grindings. None of the others showed as good a temper after the third grinding; some of them were so poor that after the third grinding the edge could be cut off with an ordinary pocket knife.

"Having thus ascertained the superiority of these sections, we were desirous of seeing the processes of their manufacture, and on making known our wishes, the Messrs. Reynolds were kind enough to show us the whole of their works, and we confess to a feeling of great surprise on seeing their sections so perfectly tempered without the agency of any liquid, by percussion, reaction and cold air alone. We saw over a thousand tempered and ground, not one of which was cracked, or which exhibited any traces of fissure whatever. We believe this process will greatly enhance the efficiency of our reaping and mowing machines, and we rejoice that American ingenuity has perfected so valuable an invention. The process, though unpatented at the time of the trial, has since been covered by letters patent.

We are now prepared to furnish the above sections for all the different machines made in the United States and Canadas.

PLANE IRONS.

By our patented process we now make and temper PLANE IRONS. Warranted superior to Butchers' or any iron made in the United States. Every Iron warranted, and money returned if not satisfactory. Old Plane Irons and Chisels of all descriptions retempered by our new process, if sent in lots of not less than one dozen.

DAISY DEAN.—A BALLAD.

BY AMILIE PETTIT.

And Daisy Dean is dead, you say,
Dead in December, born in May.

The merriest, brightest, gayest girl,
That ever won smiles from village churl.

I see her now with her eyes of blue,
And hair of that golden, sunny hue,

As if threads of light had broken away
From the shining orb of the god of day,

And shimmering down through the hazy air
Settled at last on her yellow hair;

And her rosy cheek, and dimpled chin,
And innocent face that thought of sin

Had never crossed in those other days,
When Daisy Dean had such pretty ways.

But a pretty face is dangerous, when
It wins the regard of bold, bad men.

And she was so flattered and weak and young,
And he so subtle and fond and strong,—

'Tis the same old story, the tempter came,
And wooed her away to sin and shame.

And her father and mother soon lay low,
Where an innocent one slept long ago.

Now Daisy is dead, and laid at their feet,
And flowers will bloom over her pure and sweet.

And One above in yon radiant heaven,
May claim her His own, a sinner forgiven.

The Story Teller.

Written for Moore's Rural New-Yorker.

MY SUMMER'S WORK.

BY CECIL GREY.

It was a dreary, dismal afternoon in early spring, the fog clinging pertinaciously to the hills, and the rain dripping down at intervals in the most gloomy way imaginable. The day was enough of itself to give one the blues, but I felt so discouraged that the weather was quite a minor consideration.

It was the old story. Father had died a few years before, when my brother's and my own education was but half completed. For a few terms longer we studied on, but when want came so close to us that Phil gave up graduating and sought employment, I did not feel that I could burden him by remaining at school longer, and I, too, gave up my studies, and for a time had taught in the village school near by. But the kind friend who had aided me to the situation had recently died, and a new Committee had been appointed who had not seen fit to retain me, so I was seeking employment again, thus far in vain.

Thus it happened that I was looking out into the dreary afternoon with an anxious heart. Mother noticed my mood, and divining the cause, said, soothingly—

"Never mind, Bessie, it will be for the best, though we cannot see it now. Cheer up, child, and don't worry about the future. Was that a knock at the door?"

I rose, shaking the shreds of work from my dress and went to the door.

"Mrs. Morrison lives here?"

I bowed silently.

"And this is Miss Bessie Morrison?"

I bowed again, and ushered the gentleman into the little sitting room.

"My name is Sydney Huntingdon," he continued, taking the chair I proffered him. "You may have heard my cousin, Clara Kingsley, speak of our family."

Clara had been my room-mate in school, and I had often heard her speak of her uncle and guardian, Esq. Huntingdon, and "Consin Syd.," who was then in Europe, and of the luxurious home to which they had welcomed her after her mother's death. Mr. Huntingdon had recently returned home, he informed me, to relieve his father of business cares, and, among other things, had undertaken to raise the school among his tenantry and employees from its present low condition. Clara had suggested me, with high recommendations, and it was his desire to secure my services if possible. The conditions were soon settled, and I engaged to be at my post in a few weeks.

Clara, he said, had met with a serious injury which confined her a hopeless invalid to her room, and was delighted at the thought of my spending the summer near her. The rain had ceased for a few moments when he left, and as he passed out at the door I saw a stray gleam of sunlight glinting the tree buds in the door-yard, and the trees shook their branches together, sending down a shower of glittering drops, as if they, too, were shaking off the weight of the dreary day in the ray of sunshine that had come at last.

Mother had left the sitting-room when I re-entered it, and I fell to thinking, natural enough was it not? of the man who had just left me. I felt relieved, but it seemed as if something of the old comfort was gone from the room. Somehow the colors in the room carpet seemed dimmer than when he entered; and the tarnished spots on the well-preserved furniture showed more plainly; and then Mr. Huntingdon's voice and look, rather than his face and figure, came to me again. When mother returned she said his was a handsome face and a noble form and carriage, and wondered if he had yet seen his thirtieth year; but I had not thought of either.

Well, the days glided by, and one sunny morning found me standing in the school-room on the Huntingdon domains, before about fifty boys and girls, from overgrown lads and lassies of fifteen down to children just out of the cradle. "Our wild Arabs," Mr. Huntingdon called them—and the title was not inappropriate. But as the weeks went on I found myself repaid for the care I bestowed upon them by the improvement and interest they manifested. My home was with a widow lady, a kind old soul, whose cottage stood near the Huntingdon mansion.

Clara was failing very steadily I could see, and many were the hours I spent with her,—hours which were a delightful relief from the monotony of school, to me, and seemed to make the weary days shorter for her. Mrs. Huntingdon was often with us, and occasionally, though not often, Mr. Huntingdon, or "Mr. Sydney," as the tenantry called him, came into Clara's room to bring a few wild flowers, gathered in a woodland ramble, or a new book for the invalid. Once or twice I met him while strolling through the edge of the woods that came down within a few rods of the house, and he called sometimes at Mrs. Blake's with a book for me, but for the most part I saw little of him.

The weeks sped swiftly, marred only by the sad certainty that Clara was sinking surely and rapidly. As she grew weaker I was with her during every hour unoccupied by school duties. It was hard for me; but I could not refuse her when she clung so closely to me and pleaded so touchingly for my presence with her. But one bright day late in summer, we stood among the white stones in the Huntingdon burial ground, and chanted a funeral dirge by an open grave, and a few of us who loved her best lingered to smooth the turf over Clara's last resting place.

The old mansion seemed very lonely now, and I went there less frequently, though Mrs. Huntingdon often urged me to come. But I was so worn with my watching with Clara and with my school duties, that the quiet of my own room was very welcome to me.

One warm afternoon, as I was leaving the school-room, wearied and pale with heat and the labors of the day, I encountered Sydney Huntingdon. He waited for me at the gate, saying as I came up—

"You are looking very tired, Miss Morrison; your close application is wearing upon you."

I replied that I hoped to grow better as the weather became cooler.

"You see," he said, laughingly, "you are in my especial charge this summer, and it won't do to let you wear yourself out. It would place me in an unpleasant predicament if my little school-mistress should get ill, and leave me to find a substitute. Seriously, Miss Morrison, I think you are confining yourself too closely. I'm going to drive down the river road a few miles this afternoon; won't you go with me? I'm sure the ride will do you good. Let me call for you when you are rested."

The very thought of the ride down the beautiful river road was refreshing; still more so, I found, was the reality, when a few hours later we reached Mrs. Blake's door again.

"We must have more of this," he said, as he lifted me from the carriage. "You must let me constitute myself your medical adviser, and prescribe frequent repetitions of this medicine."

After this his carriage was often at the door, and he sometimes lured me from my book or work to join him in a search for some new plant or wild flower. And often, on entering my school-room, I found beside the huge vase which the loving but unskillful hands of my pupils kept filled with buttercups and daisies and field-lilies, a small cluster of fragrant wild flowers, or a rare exotic in a vase of delicate workmanship, that called a thrill to my heart and a glow to my cheek.

One week, as the term of my engagement was nearing its close, I missed him. The sweet flowers I had learned to look for so eagerly were not found upon my desk, and Count, Sydney's favorite dog, which had always accompanied us in our walks, came over to the cottage and stretched himself at my feet, as if he felt that I sympathized with his loneliness. I heard that Mr. Huntingdon had been suddenly called away on business; and during those few days I learned how surely he had grown into my life. It was a startling acknowledgment that my heart made, for I felt how vain was the hope that he could ever be else to me than a friend. For was he not talented, handsome, wealthy, and of a proud family? while I was poor and plain, and had nothing to give him but love. Then something whispered, "He is a base trifler, and has been trying to win your heart to see how easy a conquest he could make." But my woman's heart repelled the aspersion. "No," I said, "he saw me drooping, and tried to cheer me—as he would have raised a drooping flower from the dust, or spoken a cheerful word to any weary wayfarer he might meet. His attentions to me sprung from an impulsive, generous kindness, and it had not occurred to him what the result to me might be." Thus I excused him, and blamed only myself for my weakness. He had offered me only pity, and I——, well, he should not have unasked love in return. I would avoid him, I said, till I grew stronger, and able to meet him as I did others.

So, when the night of his return he came over to the cottage, with Count bounding joyously at his side, and asked me to join him in a walk, I declined, pleading letters which must be written.

"You are looking pale; you have been ill," he said.

"I have been and am quite well, I thank you," I replied, a little piqued at his noticing the change in me.

He looked surprised, and, I fancied, a little hurt at my manner; but turned, whistled to Count, and walked away. After that I managed to avoid him for a time. I took walks in new directions when I went out, avoiding our old haunts; and the weather helped me, for it rained steadily for several days, so that walks or rides were impracticable.

But the storm cleared away a day or two before my school closed, and I felt that I must visit Clara's grave once more before I left the neighborhood; "and then," I said to myself, "I will seek a situation elsewhere," for I was not yet strong enough to brave the frequent meetings with Sydney Huntingdon that I knew must come, if I remained another term.

I sought the burial ground with a heart almost as heavy as when we stood there beside Clara's open grave; but I was not thinking so much of the silent one whom we had then borne hither as of my own loneliness and the weakness with which I staggered under this new burden. I thought wearily of the day Sydney Huntingdon came to our house, throwing a ray of sunshine upon my dark prospects for the immediate future; but the clouds had gathered darker than ever, and seemed the heavier for the sunshine that had come and gone.

The frost had tinged the green of the trees with crimson and yellow, and the short turf waving in green mounds about me was sprinkled with the gayly tinted leaves. I gathered a few of these from Clara's grave; and, warned by the slanting sunlight through the evergreens, I retraced my steps. I had struck into a foot-path that led through the edge of the wood, when a voice that I knew too well arrested my steps.

"May I walk home with you, Miss Morrison?" asked Sydney Huntingdon, and stepped to my side.

"My school closes to-morrow," I said, wishing to broach the subject of my departure. Instead of replying he stepped into the path before me and stopped.

"Bessie," he said abruptly, "why have you avoided me so of late?"

I did not answer, and he went on—

"What came over you in that week of my absence? I hoped then, Bessie," and he came nearer and took both my hands in his, "that you were learning the lesson of love I was trying to teach you. Tell me I was not mistaken, my darling; tell me that you love me, and will be my wife," and he bent over me eagerly.

But I drew away from him, saying, "You forget the difference in our position, Mr. Huntingdon, you forget that you are asking a dowerless bride."

"Oh, Bessie," and his tone was full of reproach, "don't you know I have enough for both of us? All I want is your love, my darling,—will you give me that?"

I will not tell you what I told him, but will say that I carried out my original intention of going home, and that another teacher took my place that winter, and that a great deal of preparation went on at home, followed by a few words spoken in our little parlor by our pastor, and a trip to Europe with Sydney. If you wish to know, however, what it was I said that day under the trees, you may ask my husband, as he sits near me engaged with his "foreign correspondence." I think he will tell you it was something neither of us have ever had occasion to regret.

A NEST OF RIDDLES.

1. A prophet of old had a mother whose name
Read backward or forward, is always the same.
2. And of female recluses, we know that the name
Read backward or forward is always the same.
3. When a child, you were dressed in a garment whose name
Read backward or forward, is always the same.
4. You may travel abroad in a carriage, whose name
Read backward or forward, is always the same.
5. You may pass o'er a flat piece of country, whose name
Read backward or forward, is always the same,
6. Where the lamb trots about with a creature, whose name
Read backward or forward, is always the same.

[*Child's Paper.*

ANSWERS TO ENIGMAS, &c., IN No. 934.

Answer to Miscellaneous Enigma:—Webster's Unabridged Dictionary.

Answer to Problem:—1 minute and 14 seconds past 8 o'clock A. M.

Answer to Illustrated Rebus:—A graveyard was recently sold for taxes in Missouri.

Our Illustrated Prize Rebus in No. 933 of the Rural seems to have met with the universal response—"We give it up,"—no answers having been received. The following is the rendering:—"*Bemus Heights Battle Ground is at Stillwater New York.*

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2.70 is the lowest Club rate for Canada, and $3.50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

Publisher's Notices.

Send Early!—In order that we may get the names of subscribers in type for mailing machine as fast and early as possible, our freinds are requested to send their lists—or portions of them—as soon as convenient. Those who are forming large clubs can send what they have, and complete their lists afterwards. Many agents keep to work for six months, remitting from time to time: and some after sending for one club form another and get a second or larger premium.

Premium List, Show-Bill, &c.—Our Premiums to Club Agents are more liberal than ever before, but we have not space to give a list of them in the Rural. Premium Lists, Show-Bills, Specimens, &c., are promptly sent, free, to all applicants. Give us your address, and also that of any friends who may be disposed to form clubs, that you and they may see our offers of "Good Pay for Doing Good."

Our Club Rate.—The lowest Club Rate of the Rural is $2.50, and if any agents offer it for less they must pay us that price. *Our* rates are invariable, and none are authorized to depart from them—though of course we cannot prevent agents from doing so, or even giving away the paper; that is their business.

Local Club Agents.—We want a live, wide-awake agent for the Rural in every town where there is none. Reader, if you cannot act as such, please induce your P. M. or some influential friend to do so.

No Traveling Agents are employed by us, and we give no certificates of agency. Any person so disposed can act as Local Club Agent, on his or her own authority, and compete for premiums, etc.

How to Remit.—The safest way to remit for the Rural is by Draft or Post-Office Money Order,—and either of these, if made payable to his order, may be sent at the risk of the Publisher.

How to Help the Rural.—There are numerous ways in which its friends can aid to circulating the Rural. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent. Our premiums are liberal and sure. Send for the list, which (together with show-bill, prospectus, &c.,) we send free. A little effort will secure a good club in almost any locality, and this is the best season to make the effort. Reader, will you please see that the matter is attended to in *your* neighborhood?

The Price of the Rural.—If any one objects to the price of the Rural, please ask him or her to compare the paper in Contents, Appearance, &c., with any similar journal, weekly or monthly,—or with any reprint of a daily or trashy literary paper. State the FACT that the first cost of the Rural (for Editorial and other Contributions, Engravings, &c., &c.) is far greater than that of any of its contemporaries,—and moreover that it is far cheaper now, at $3, than it was at $2 before the war, compared with the prices of provisions, clothing, etc. A little examination and figuring will satisfy any candid, intelligent person that the Rural New-Yorker is really the cheapest paper of its class.

About Premiums, &c.—Agents and others who form clubs for our premiums will please be careful, in sending in their lists, to note which are the *new* subscribers and which are the *renewals*. This is essential that we may keep the accounts correctly.

Keep a List!—If each agent will keep a list of all the names sent us, with dates and amounts of remittances, it will greatly facilitate the correction of any errors which may be made at either end of the line.

The Best Way to obtain subscribers for the Rural is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

New Advertisements.

TWENTY-FIFTH THOUSAND.
THE TEMPLE CHOIR, a new collection of Tunes, Anthems, Glees, Elementary Exercises and Social Songs, for the Choir, Singing School and Social Circle, by THEODORE F. SEWARD, assisted by Dr. LOWELL MASON and WILLIAM B. BRADBURY, first published only a few weeks since, has already reached its twenty-fifth thousand, and proves THE MOST POPULAR WORK OF ITS CLASS PUBLISHED IN THIS COUNTRY FOR MANY YEARS. It is the first book in which Dr. Mason and Mr. Bradbury have been associated as editors, and beside their own recent compositions and arrangements, probably represents a greater number of other popular composers than any other work. It is a thoroughly pleasing and useful book, which every one likes. Price $1,50 each; $13,50 per dozen. A single copy (only) to any teacher of music or leader of choir, post-paid, for examination, for one dollar. Published by
MASON BROTHERS, 596 Broadway, New York.
MASON & HAMLIN, 154 Tremont St, Boston.

"THE PULPIT."
A 32 page Journal of Public Speaking, Pure Literature and Practical Religion.
Containing some of the best things said by the Clergy and public men the world over.
Sent One Year for Nothing!
Send 10 cents with your address to
"THE PULPIT CO.,"
37 Park Row, New York.

CHILDREN.—ALL PARENTS SHOULD understand that children's shoes, with metal tips, will wear at least three times as long as those without. The new Silver Tip is decidedly ornamental, and is being extensively used on children's first-class shoes. Sold everywhere. 934-4t

New Advertisements.

A COUGH, a COLD, or a SORE THROAT, Requires immediate attention, and should be checked. If allowed to continue,
Irritation of the Lungs, a Permanent Throat Disease, or Consumption,
is often the result.
BROWN'S BRONCHIAL TROCHES
Having a direct influence to the parts, give immediate relief. For Bronchitis, Asthma, Catarrh, Consumptive and Throat Diseases, Troches are used with always good success.
Singers and Public Speakers use them to clear and strengthen the voice.
Obtain only "Brown's Bronchial Troches," and do not take any of the worthless imitations that may be offered. Sold Everywhere. 933-3mo

BRADBURY'S FRESH LAURELS
Is his latest, most popular and splendid music book for Sabbath-schools. The music is new, fresh and very attractive. Hymns—short, earnest, full of Gospel truth, and adapted to every occasion. EVERY Sabbath-school must have "LAURELS" sooner or later. The author says:—"I never made a book that was so perfect and at once so popular, and gave such universal satisfaction." Price $25 and $30 per hundred. Send 25 cents for specimen copy.
WM. B. BRADBURY, 425 Broome St., New York.

THE BEST ARE THE CHEAPEST.
THE MASON & HAMLIN CABINET ORGANS have just been awarded a FIRST PRIZE MEDAL at the Grand Exposition in Paris, in competition with instruments from the best makers of all countries. This makes over SEVENTY HIGHEST PREMIUMS awarded them within a few years. Testimonials from more than three hundred of the most prominent musicians in the country that these instruments are unequalled, are published in the circulars of Mason & Hamlin.
Observe that dealers in musical instruments are strongly tempted to recommend as equal to the best, those instruments on which they can make the largest profit. The prices of M. & H. are fixed and invariable. They cannot afford the large discounts made by manufacturers of inferior work, many of whom sell at 40 to 50 per cent. discount.
At the prices at which they are sold, the Mason & Hamlin Organs are believed to be not only the best but the cheapest instruments of their class. Send for a circular, with particulars, to MASON & HAMLIN,
596 Broadway, N. Y., or 154 Tremont St., Boston.

933-1mo Publishers, 245 Broadway, New York.

WILLIAM MASON AND E. S. HOADLEY'S New Method for the Pianoforte.
Already a second edition of this new work is ready and nearly sold in advance. It is new in method and matter, embracing modern exercises and expedients not heretofore presented, while its selection of Exercises, Recreations and Pieces, mostly from composers of recognized eminence, is unusually large and very choice.
This is the first instruction book to include the technicals of modern pianoforte playing. It has a full elucidation and illustration of Mr. Mason's new system of Accentual Treatment of Exercises, by which the attention of the pupil is almost compelled, and careless practice is rendered nearly impossible, while not only the hands, but also the mind, taste and artistic perceptions are cultivated and trained.
It is eminently a practical work, the result of long and most successful experience in the actual business of pianoforte teaching. It is carefully progressive, very clear and perspicuous and full in its explanations and directions, illustrated by cuts and diagrams, and is adapted to the use of young beginners as well as those who have made progress. 240 pp., large 4to. Price $4. Two editions are published; one with AMERICAN and one with EUROPEAN FINGERING. Care should be taken to designate which is wanted. Published by
MASON BROTHERS, 596 Broadway, New York.
MASON & HAMLIN, 154 Tremont St., Boston.

WATERS'S FIRST PREMIUM PIANOS, with Agraffe Treble, Iron Frame and over-strung Bass, will stand any climate.
Melodeons; Parlor, Church and Cabinet Organs,
The best manufactured, warranted for six years.
